Canadian Manuscript Report of Fisheries and Aquatic Sciences No. 2092

Canadian Manuscript Report of Fisheries and Aquatic Sciences

Manuscript reports contain scientific and technical information that contributes to existing knowledge but which deals with national or regional problems. Distribution is restricted to institutions or individuals located in particular regions of Canada. However, no restriction is placed on subject matter, and the series reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Manuscript reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report is abstracted in Aquatic Sciences and Fisheries Abstracts and indexed in the Department's annual index to scientific and

technical publications.

Numbers 1-900 in this series were issued as Manuscript Reports (Biological Series) of the Biological Board of Canada, and subsequent to 1937 when the name of the Board was changed by Act of Parliament, as Manuscript Reports (Biological Series) of the Fisheries Research Board of Canada. Numbers 901-1425 were issued as Manuscript Reports of the Fisheries Research Board of Canada. Numbers 1426-1550 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Manuscript Reports. The current series name was changed with report number 1551.

Manuscript reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport manuscrit canadien des sciences halieutiques et aquatiques

Les rapports manuscrits contiennent des renseignements scientifiques et techniques qui constituent une contribution aux connaissances actuelles, mais qui traitent de problèmes nationaux ou régionaux. La distribution en est limitée aux organismes et aux personnes de régions particulières du Canada. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports manuscrits peuvent être cités comme des publications complètes. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports manuscrits sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 900 de cette série ont été publiés à titre de manuscrits (série biologique) de l'Office de biologie du Canada, et après le changement de la désignation de cet organisme par décret du Parlement, en 1937, ont été classés comme manuscrits (série biologique) de l'Office des recherches sur les pêcheries du Canada. Les numéros 901 à 1425 ont été publiés à titre de rapports manuscrits de l'Office des recherches sur les pêcheries du Canada. Les numéros 1426 à 1550 sont parus à titre de rapports manuscrits du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 1551.

Les rapports manuscrits sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

RECREATIONAL MAIL SURVEYS, 1989 -TIDAL SPORTFISHING DIARY PROGRAM AND VISITORS SPORTFISHING SURVEY

PREFACE

The Tidal Sportfishing Diary Program was initiated in 1979 to obtain estimates of the sport catch by B.C. residents fishing in B.C. tidal waters. The Visitors Sportfishing Survey was first conducted in 1982 to obtain estimates of sport catch and expenditures by visitors fishing in B.C. tidal waters. Previous reports cover survey development and annual results. This report serves as a continuation of this series and deals with the 1989/90 results. Catch estimates are presented in these reports as survey results and are not necessarily the accepted numbers for all species and areas.

Minister of Supply and Services Canada 1989. Cat No. FS97-4/2092 ISSN0706-6473.

ABSTRACT

Bijsterveld, L. 1990. Recreational mail surveys, 1989 - Tidal Sportfishing Diary Program and Visitors Sportfishing Survey. Can. Manuscr. Rep. Fish. Aquat. Sci. 2092: vi + 31 p.

Mail surveys collected 1989/90 licence year catch and effort data on recreational fishing in B.C. tidal waters. During 2,199,000 angler days, adult anglers caught and kept 1,978,000 salmon including 524,000 chinook and 1,101,000 coho. Problems related to mail surveys are reviewed.

Keywords: sportfishing, tidal waters, logbook, mail survey, catch statistics

RECREATIONAL MAIL SURVEYS, 1989 -TIDAL SPORTFISHING DIARY PROGRAM AND VISITORS SPORTFISHING SURVEY

INTRODUCTION

The Tidal Sportfishing Diary Program is a mail survey of resident B.C. tidal water anglers. The Diary Program was introduced in 1979 as a method of estimating recreational catch and effort. It was necessary to survey large numbers of B.C. adults in order to contact anglers in the absence of a licencing program. The B.C. Tidal Waters Sport Fishing Licence, introduced during 1981, identified anglers and provided a sample base for the program beginning in 1982. The licences also provide a sample base for anglers visiting B.C. The Visitors Sportfishing Survey was first conducted in 1982 to obtain estimates of sport catch and expenditures by anglers visiting B.C. during the previous year. The 1981 and 1982 licence years corresponded to calendar years (January 1 to December 31). The 1983 licence year was a transition from a calendar year to a fiscal year (April 1 to March 31) and extended from January 1, 1983 to March 31, 1984. The 1983 Diary program and Visitors Survey covered the entire 15 month period although only the 1983 calendar year statistics were published. The 1989/90 population and catch and effort statistics correspond to the 1989/90 licence year (April 1, 1989 - March 31, 1989).

METHODOLOGY

A systematic sample of 39,000 1988/89 B.C. Tidal Waters Sport Fishing Licences was drawn. The licence information was keyed directly from the licence stubs into a computer to produce an address list. The B.C. addresses were used for the Diary Program while the remainder were used for the Visitors Sportfishing Survey.

Tidal Sportfishing Diary Program

In 1989/90, the Diary Program was conducted as follows: semi-monthly, a new sample or panel of 1,400 licence holders was mailed a diary form covering a full "month". Half of the panels were responsible for recording fishing activity for a calendar month, the other half for an interval from the middle of one month to the middle of the next. Data for the first half of the "month" was filled in from memory; data for the second half was filled in as anglers fished. Diarists were provided with addressed postage paid envelopes for returning the survey forms. Drawings of the 5 salmon species and lingcod, rockfish and halibut were included to aid identification. Reminders were sent to all panel members at the end of the "month".

The data from returned diaries was entered into a computer. A program checked the data during entry to prevent duplicate entries and to ensure that the areas, months, types of fishing and daily catches were valid. Invalid information was not used for estimation of catch and effort. Diaries received more that one month after the last date of the diary "month" were considered to be late and were not used.

Visitors Sportfishing Survey

Three thousand questionnaires were sent to visiting North American anglers (excluding B.C.) at the end of the licence year. Reminders were sent to questionnaire nonrespondents four weeks after the initial sendout. Questionnaire recipients were asked about their fishing activity in B.C. during the 1989/90 licence year.

The data from returned surveys was entered into a computer. A program checked the data during entry to prevent duplicate entries and to ensure that the areas, months, and daily catches were valid. Invalid information was not used for estimation of catch and effort. Surveys received more that one month after the reminder sendout were considered to be late and were not used.

RESULTS

Returns

The number of diary returns for each panel of the 1989/90 Diary Program is provided in Table 1. The percentage of anglers returning diaries and fishing during each diary period varies throughout the year, as shown in Table 1. During the entire year, 40% of the anglers contacted returned diaries. Fourteen percent of those returning diaries actually fished. The response rate appears lower than in previous years (Table 2). The percentage returned was higher but some returned surveys were misplaced and were not available for analysis. In addition, Canada Post changed its standards for business mail and insisted that postal codes be present on all outgoing mail. This affected the number of undeliverables for some batches.

Three thousand questionnaires were sent out for the 1989/90 Visitors Survey. The return rate for the Visitors Survey was 67%.

Resident Sportfishing Population

The estimated number of B.C. resident adult anglers in 1989/90 is provided in Table 3. The population is estimated using the proportion of B.C. anglers in the licence sample and the total licence sales. The population consists of adult B.C. resident tidal water anglers, aged 16 and over. Characteristics of the population of licence holders can be estimated from the sample. Males account for 79% of the population of licence holders while females account for 21% (Figure 1). The population of B.C. adults, by comparison, is composed of almost equal numbers of males and females (Statistics Canada 1990).

The age composition of the B.C. adult population is presented in Figure 2. The proportion of individuals between 26 and 64 years of age is higher among licenced anglers than among B.C. adults in general. More young adults and people 65 years of age and over are present in the total population of adults (Statistics Canada 1990).

1986/87	242,000
1987/88	240,000
1988/89	237,000
1989/90	251,000

The distribution of B.C. licenced anglers by area of residence is presented in Figure 3. Over 75% of licenced anglers are from Vancouver Island and the Greater Vancouver area. Eight percent of B.C. adults purchased a Tidal Waters Sport Fishing Licence in 1989. As expected, this percentage was higher in coastal areas as shown in Figure 3.

Population of Visiting Anglers

The estimated number of anglers visiting B.C. in 1989/90 is presented in Table 4. The sex composition of the population of visiting anglers is similar to the composition of B.C. resident anglers. Males account for 80% of the visiting population and females account for 20%.

The age composition of the population of visiting anglers is presented in Figure 2. The proportion of individuals over the age of 35 is higher among visiting anglers than among B.C. resident anglers.

Americans accounted for 68% of the visiting anglers while Canadians accounted for 28%. The remaining 4% of the visiting anglers originated from outside North America. The proportions of visiting anglers by country of origin are presented in Figures 4 and 5.

Catch

British Columbia resident and visiting angler catches are presented in Table 5 and Table 6, respectively. The combined catch by B.C. resident and visiting anglers is presented in Table 7.

Most of the salmon were caught between Vancouver Island and the mainland. This area accounted for 83% of the total salmon, including 68% of the chinook and 87% of the coho caught and kept by B.C. resident anglers in 1989/90. This area contributed a smaller proportion (68%) of the total salmon caught by visiting anglers.

Almost 80% of the rockfish and lingcod caught by residents were taken from waters between Vancouver Island and the mainland. About 70% of the lingcod and the rockfish caught by visitors were taken from this area. Most (59%) of the halibut caught by B.C. residents were taken from waters north of Vancouver Island. Almost half (48%) of the halibut catch by visitors was taken from waters west of Vancouver Island.

Effort

British Columbia resident anglers fished an estimated 1.7 million days in 1989/90. Visiting anglers fished an estimated 516,000 days in B.C. tidal waters in the 1989/90 licence year, bringing the total tidal water estimate of effort to 2.2 million days during the 1989/90 licence year. More than 90% of the finfish effort by B.C. resident anglers occurs from boats. Most of the combined effort (81%) by residents and visitors occurs between Vancouver Island and the mainland.

Catch and Effort by Juvenile Anglers

A Tidal Waters Sport Fishing Licence for juvenile anglers (age 15 and under) was introduced as part of the 1988/89 licence system. The population of juvenile anglers by residence can be estimated from juvenile licence sales and a sample of licences providing residence information. In 1989/90, there were 46,100 B.C. juvenile anglers and 11,900 visiting juvenile anglers, estimated using licence sales and sample information.

Other surveys (Cox 1977; Cumming 1979; Pelletier, Lacasse and Ducharme 1981; Thomson 1974) indicate that the average number of days fished by resident juvenile anglers is one-third to two-thirds the average number of days fished by their adult counterparts. Juvenile resident effort is estimated using the assumption that each juvenile resident angler fishes half as many days as an adult resident.

Results of previous Visitors Surveys (James 1986; James 1985) indicate that the majority of visiting anglers come to the province to fish or for a vacation. Juvenile visiting anglers would probably be members of families on fishing trips or vacations. These juveniles would be more likely to fish than would resident juveniles. The assumption is, therefore, that visiting juveniles fish proportionally more than resident juveniles but less than visiting adults. It is assumed that visiting juveniles fish 75% the number of days fished by visiting adults.

The catch by juvenile anglers is estimated to be the effort by juvenile anglers multiplied by the catch rates for adult anglers. It is assumed that juvenile anglers generally fish with and are assisted by adults so the catch rates are equal. The catch and effort for juvenile anglers is presented in Table 9. These numbers are not included in the previously discussed catches by adult anglers.

TABLE 9

1989/90 SPORT CATCH AND EFFORT BY ADULT AND JUVENILE ANGLERS

20

Type of Angler	Number of Anglers	Angler Days	<u>Chinook</u>	<u>Coho</u>
Adults:

TOTAL ANGLERS	421,100	2,394,400	570,100	1,199,100

DISCUSSION

Nonresponse Bias

Certain types of error are associated with any type of survey. One type of error is referred to as nonresponse and may result from the failure to measure or contact the entire survey sample (Cochrane 1977). Biased measurements could be obtained if the characteristics of the measured group differ from the group not measured. Individuals that voluntarily return questionnaires as part of a mail survey are possibly more interested in the questionnaire subject and could differ from those who don't return questionnaires. Tidal Diary respondents could be more active and successful anglers than nonrespondents. Estimates of fishing activity from this source alone could be biased upwards.

Nonrespondents were surveyed by telephone as part of the 1987/88 Diary program. Survey results indicate that 73% of the nonrespondents fished compared to 74% of the respondents. A chi-square test indicated no difference between these participation rates at the .05 level of significance. Nonrespondents reported fishing more days and catching more salmon, on the average, although these differences are not significant as indicated by t-tests at the .05 level of significance. Catch per angler day (CPUE) can be considered to be a measure of fishing success. The chinook and coho CPUE for respondents were higher but not significantly so as indicated by t-tests at the .05 level of significance. Therefore, the hypothesis that nonrespondents were as successful as the respondents was accepted.

Recall Bias

Another source of error is recall bias that arises when individuals cannot always accurately recall details after time has passed. The result could be either under or over estimating, depending on the subject. The magnitude of the error could increase with time. This type of bias can be a problem in postseason mail surveys such as the Visitors Survey when the recall period is long. Diary program participants, however, are asked to recall the last half month only and keep records as they fish for the remainder of the month. For each half month, a recalled set of data and a current set of data are collected. Recalled and current data were compared for the 1985 through 1988 programs. Generally, the average catch and effort was higher for recalled data than for current data. The differences between

the recalled and current data were not significant as indicated by analyses of variance at the .05 level of significance.

Diaries received more that one month after the last date of the diary "month" are considered to be late and are not used for catch and effort estimation. The purpose of this exclusion is to eliminate information recalled over a longer period of time and reduce the possible effects of recall bias.

Inaccurate Reporting

Error can also result from inaccurate reporting by the respondents. Drawings of the required fish with identification points were supplied to all of the diarists to assist in correct species identification. During data entry, a computer program checked the catches against valid daily limits. Catches over the limit were were not used for catch estimation because the the catch could have been identified incorrectly or the reported catch could have been for the fishing party rather than for the individual angler.

FORM SAMPLES

1. Tidal Sportfishing Diary - Page 1

TIDAL SPORTFISHING DIARY - K START HERE

PAGE 1

Try to remember about your fishing for the period -

Please fill in circles with check marks ((7)) and boxes with numbers ($\boxed{1}$), If you have any questions about the Diary, please refer to the enclosed cover page.

1. Did you fish?	0	 Please	proceed to	the	other	side	of th	e page.	 ٠
Ye 3	N O								
1									

Please fill out the forms below for each day you fished as follows:

- 2. Look at the enclosed map and enter the number of the area you fished.
- 3. Enter "B" for Boat, "S" for Shore, "P" for Pier, "R" for River Bar and "D" for Diving.
- 4. If you used a boat, check the enclosed map. If you find the marine you used, enter it's letter code.
- 5. Enter how many chinook you yourself threw back and/or kept. Please enter your personal catch, not the total catch of your fishing party.
- 6. Enter how many coho you yourself threw back and/or kept. Please enter your personal catch, not the total catch of your fishing party.
- 7. Enter how many of these other fish you kept. Please enter your personal catch, not the total catch of your fishing party.

Example: In the example below, the angler fished on the 5th in area 17 from a boat launched from Brechin Point. The angler threw back 2 coho and kept 1 chinook, 2 coho, 3 rockfish and 1 other fish.

1989/90
VISITORS SPORTFISHING SURVEY

STATISTICS
Department of Fisher es
410-655 W. Hastings
Vancager R.C. J68-503

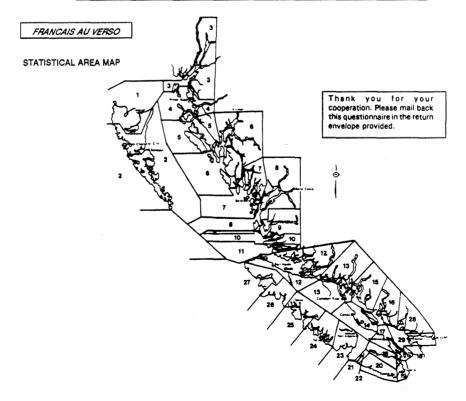

1. Did you fish in B.C. tidal waters during the 1989/90 licence year (April 1989 - March 1990)? (Please check one of the circles).

Yes No Tha mai

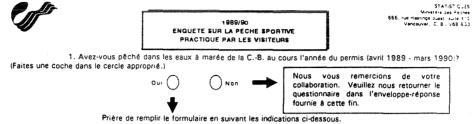

Thank you for your cooperation. Please mail back this questionnaire in the return envelope provided.

- Please fill out the form below as follows:
- 2. MONTH: Record the month(s) you fished in B.C. tidal waters during 1989/90. Please use one row for each different month.
- 3. AREA: Refer to the Statistical Area Map below. Locate the area(s) where you were fishing and record the area number. If you fished in more than one area during a month, use a separate line for each area and record the days fished and catch for each different area.
- 4. # OF DAYS: Record the number of days you fished in each area and month. Include the days where nothing was caught.
- 5. SALMON: Record the number of fish you yourself kept in the appropriate column. Please enter your personal catch, not the total catch of your fishing party. Record king and spring salmon in the "chinook" column and silver in the "coho" column.
- 6. OTHER FISH: Record the number of fish you yourself kept in the appropriate column. Please enter your personal catch, not the total catch of your fishing party.

Example: In the example below, the angler fished during July in Area 13 for 4 days. Two chinook, 1 pink and 4 rockfish were caught and kept.

2. Visitor Sportfishing Survey - Page 2

- 2. MOIS: Inscrivez les mois où vous avez pêché dans les eaux à marée de la C.-B. au cours de 1989-90. Employez une ligne pour chaque mois.
- 3. SECTEUR: Reportez-vous à la carte des secteurs statistiques ci-dessous. Trouvez les secteurs dans lesquels vous avez pêché et consignez-en le numéro. Si vous avez pêché dans plus d'un secteur au cours du mois, employez une ligne distincte pour chaque secteur et inscrivez dans chaque cas les jours où vous avez pêché et vos prises.
- 4. NO. DE JOURS: Indiquez le nombre de jours où vous avez pêché dans chaque secteur et le mois. Comptez également les jours où vous n'avez rien pris.
- 5. SAUMON: Inscrivez dans la colonne appropriée le nombre de poissons que vous-même vous avez gardés. Indiquez vos prises personnelles, plutôt que celles de tout le groupe.
- 6. AUTRES POISSONS: Inscrivez dans la colonne appropriée le nombre de poissons que vous-même vous avez gardés. Indiquez vos prises personnelles, plutôt que celles de tout le groupe.

Exemple: Dans l'exemple ci-dessous, le pêcheur a pêché quatre jours en juillet dans le secteur 13. Il a pris et gardé deux quinnats, un saumon rose et quatre sébastes.
