

# HOUSING MARKET OUTLOOK

## Canada Edition

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2014

## Housing starts point to a soft landing in 2014 and 2015

### Overview<sup>1</sup>

#### Housing Starts:

2014: 184,800

2015: 183,100

#### Resales:

2014: 463,600

2015: 474,300

to rise from 457,761 units in 2013 to 463,600 units in 2014 and 474,300 units in 2015.

#### Resale prices:

The average MLS® price is expected to reach \$399,800 in 2014 and \$406,800 in 2015, representing increases of 4.5 per cent and 1.8 per cent, respectively.

#### Housing starts:

Total housing starts are expected to edge down to 184,800 units in 2014 and then remain stable at 183,100 units in 2015 as modest increases in employment and household disposable income provide support to housing demand. However, builders are expected to continue to adjust activity, particularly with respect to multi-unit construction, in order to manage inventory levels in the near term.

#### Resales:

Existing home sales are expected to rise along with economic conditions over the forecast horizon. On an annual basis, sales through the Multiple Listing Service® (MLS®)<sup>2</sup> are expected

#### Provincial spotlight:

In 2014, Alberta is forecast to see the strongest growth in housing starts, due to improving economic and employment prospects relative to the rest of the country. Quebec and British Columbia are also forecast to see housing starts increase, albeit modestly. In 2015, housing starts are anticipated to increase slightly in Quebec, British Columbia and Manitoba, supported by improving economic conditions.

# Detailed National Housing Outlook

## Starts to edge down over the forecast horizon

Economic conditions in Canada are projected to gradually improve in 2014 and 2015 and lead to modest increases in employment, disposable income and housing demand. However, there are a number of offsetting factors contributing to the forecast of a moderation in housing starts.

First, total completed and unabsorbed units have continued on an upward trend since the early 2000s, driven by growth in the multi-unit segment. In the first quarter of 2014, the inventory<sup>3</sup> of completed and unabsorbed dwellings per 10,000 population remained at 4.8 units, slightly above the historical average of 4.3 units. As a result, builders are expected to slow the pace of starts activity in order to manage their inventory levels in the short-term.

Second, there are number of factors expected to reduce the pool of first-time home buyers, including the demographic trends of slowing population growth of the 25-34 cohort, particularly near the end of the forecast horizon.

Third, the growth of house prices, particularly in major CMAs, is expected to partly offset improvements in affordability due to growth in employment and disposable income.

Fourth, while mortgage rates are currently at historic lows, the consensus forecast is that rates are forecast to increase in the latter half of 2015, which will have a dampening impact on housing demand.

Taking all these factors into consideration, housing starts are expected to moderate in 2014 to 184,800 units and remain at a comparable level of 183,100 units in 2015. To reflect potential risks to the outlook, CMHC produces range forecasts. The housing starts forecast range for 2014 is 179,600 to 189,900 units, while 2015's is 163,000 to 203,200 units.

## Single-detached starts to moderate in 2014 and 2015

In the second quarter of 2014, actual single-detached starts declined 4.4 per cent, compared to the same period last year. Overall, total single-detached starts are projected to moderate due to a number of factors.

First, the positive impacts of improving economic conditions on housing demand are being tempered by price growth in many markets and expectations of future rises in mortgage rates. As a result, it is expected that demand for new homes will shift towards lower-priced alternatives available on the market. These include new multi-unit dwellings as well as existing units in the resale market.

Second, the supply of single-detached housing units appears balanced, with the inventory of newly completed and unabsorbed units per 10,000 population stable and in line with historical trends.

Overall, single-detached starts are forecast to be 74,000 units in 2014, a decline of 3.8 per cent relative to 2013. In 2015, single-detached starts are expected to remain relatively unchanged at 74,400 units. Reflecting the risks to the outlook, single-detached starts are expected to range between 71,700 and 76,200 units for 2014 and between 65,600 and 83,200 units for 2015.

## Multi-unit starts are expected to remain stable in 2014 and 2015

In the second quarter of 2014, actual multi-unit<sup>4</sup> starts totalled 31,787 units, a 10.5 per cent increase compared to the second quarter of 2013. Overall, total multi-unit starts in 2014 are expected to gradually soften due to the factors listed below.

First, some local markets are experiencing modest supply and demand imbalances, with the number of completed and unabsorbed units currently at 3.2 units per 10,000 population, slightly above the historical average of 2.7 units. As a result, builders are expected to moderately reduce the pace of multi-unit activity, at least in the short-term, in order to manage their inventory levels.

<sup>3</sup> The level of inventories discussed here is for urban centres with a population of 50,000 and over. The inventory of housing units is defined as a snapshot of the level of completed and unabsorbed units at a specific time. A dwelling is defined as being "absorbed" when a non-binding, non-conditional agreement is made to buy the dwelling. The definition of this concept was recently updated. Prior to 2013, a unit was defined as "absorbed" when an agreement was made to buy or rent the dwelling. However, data on absorption for multiple dwelling units intended for rent was not always available. Supply conditions in the owner and rental markets are now collected under separate, dedicated surveys (see CMHC's Rental Market Survey for rented accommodation and CMHC's Starts and Completions Survey for owned accommodation). In addition, the series' name was changed from "newly completed and unoccupied" to "newly completed and unabsorbed" as a result of the move toward counts based on the existence of a binding contract.

<sup>4</sup> Multi-units housing starts include semi-detached, row and apartment units.

Second, demographic<sup>5</sup> trends are expected to put downward pressure on multi-unit housing demand. Specifically, Statistics Canada projections indicate that the growth rate of the Canadian population aged 25-34 is expected to slow near the end of the forecast horizon and continue on a longer-term downward trend. CMHC's analysis has shown that the population aged 25-34 represents a large share of the first-time home buyers segment that traditionally enters homeownership through the lower priced multi-unit housing segment.

On the other hand, downward pressure on multi-unit starts activity from supply imbalances and demographic pressures is expected to be somewhat offset from continued house price increases, thus shifting demand towards lower-priced alternatives such as multi-unit dwellings.

Overall, multi-unit starts in 2014 are expected to be 110,800 units, comparable to levels seen in 2013. In 2015, multi-unit starts are expected to decline slightly by 1.9 per cent relative to 2014 to 108,700 units. Multi-unit housing starts are expected to range between 107,900 and 113,700 units for 2014 and between 97,400 and 120,000 units for 2015, reflecting potential risks to the outlook.

### **MLS® sales expected to rise moderately along with economic conditions**

MLS® sales are expected to increase moderately in 2014, supported by gradually improving economic conditions.

In 2015, economic fundamentals will gain further momentum and provide stronger support to resale housing demand. The anticipation of a rise in mortgage rates by the latter part of 2015 will also contribute to a shift in sales from higher-priced new single-detached homes toward relatively lower-priced resale housing options. Nonetheless, this growth in demand for existing units is expected to be somewhat contained by a slowing number of first time home buyers.

Consistent with these trends, CMHC's point forecast is for 463,600 MLS® sales in 2014, an increase of 1.4 per cent relative to 2013. In 2015, MLS® sales are forecast to rise further to 474,300 units. MLS® sales are expected to be between 450,800 and 482,700 units in 2014 and between 455,800 and 502,900 units in 2015, reflecting potential risks to the outlook.

### **Balanced<sup>6</sup> national market conditions to prevail over the forecast horizon**

At the national level, Canada's housing market will be supported by improving economic conditions translating to higher employment and income growth. Overall market conditions remain balanced and house prices are generally in line with underlying demographic and economic factors. While there are some indicators which suggest some modest overvaluation, this is not a concern given the strong underlying factors that support the housing market. The outlook for the Canadian housing sector is moderation, with a soft landing expected.

The average MLS® price for Canada is expected to be between \$394,700 and \$405,700 this year and between \$396,500 and \$416,900 in 2015. CMHC's point forecast for the average MLS® price calls for a 4.5 per cent gain in 2014 to \$399,800 and a 1.8 per cent gain in 2015 to \$406,800. The decrease in growth of the average MLS® price next year is due to a reduction in more expensive resales and an increase in moderately priced resale units.

### **Provincial summary**

In 2014, Alberta is forecast to see the greatest growth in housing starts, supported by stronger economic and employment prospects relative to the rest of the country. Quebec and British Columbia are also forecast to see housing starts increase, albeit modestly. In contrast, starts in Saskatchewan and Manitoba are expected to decline due to expected supply adjustments, while housing starts in Ontario are expected to continue to slow down because of the slowing of apartment construction expected through remainder of 2014 and modest employment and income growth.

In 2015, housing starts are expected to increase modestly in Quebec, British Columbia and Manitoba based on improving economic conditions. In contrast, Alberta is expected to see a reduction in starts activity due to supply adjustments and expected declines in net migration.

In 2014, all provinces east of Manitoba are expected to see lower MLS® sales. However, strong growth in existing home sales in British Columbia and

<sup>5</sup> Demographic forecasts are based on Statistics Canada's medium-growth population projection as of July 2014 (Table 052-0005).

<sup>6</sup> Taking the Canadian MLS® market as a whole, a sales-to-new listings ratio below 40 per cent has historically accompanied prices that are rising at a rate that is less than inflation, a situation known as a buyer's market. A sales-to-new listings ratio above 55 per cent is associated with a seller's market. In a seller's market, home prices generally rise more rapidly than overall inflation. When the sales-to-new listings ratio is between these thresholds, the market is said to be balanced.

Alberta is expected to push the national average number of MLS® transactions marginally higher. In 2014, Ontario and Alberta are expected to see the strongest growth in average MLS® home prices.

In 2015, Newfoundland and Labrador, Prince Edward Island and New Brunswick will see existing home sales trend down, whereas all other provinces are expected to post increases. Ontario and Quebec are expected to see the greatest growth in existing home sales. Average MLS® home prices are forecast to see the strongest price growth in Manitoba and Alberta (see pages 7 to 16 for the detailed provincial outlooks).

## Trends Impacting Housing<sup>7</sup>

### Gradual growth in Gross Domestic Product

Over the forecast horizon, global economic growth is expected to increase. Canadian exports and investments, both resource and non-resource based, are expected to benefit from the improved outlook and in particular from the anticipated U.S. recovery by 2015. This is reflected in the consensus economic forecast, where Gross Domestic Product (GDP) in Canada is forecast to grow at a gradually faster rate in 2014 (2.3 per cent) relative to 2013 (2.0 per cent), before rising further to 2.5 per cent in 2015. A more broadly based Canadian recovery is also expected to support demand in the housing market.

### Improving trends in employment

Consensus economic forecasts predict that the overall Canadian unemployment rate will continue to decline, falling to 6.9 per cent in 2014 and further to 6.7 per cent in 2015 compared to 7.1 per cent in 2013. In addition, hourly earnings are also forecast to grow modestly faster than consumer prices, with earnings expected to grow by 2.1 per cent in 2014 and 2.3 per cent in 2015. These trends will help to support housing demand.

### Demographic trends are expected to impact the composition of housing demand over the longer-term

Over the longer-term, there are a number of factors supporting the upward in the share of multi-unit dwellings as a proportion of overall starts activity.

- Continued price progression is expected to shift demand towards lower-priced alternatives, including multi-unit dwellings.
- Household formation trends are changing, with Statistics Canada censuses indicating declining prevalence of couples with children and increasing prevalence of one person households and households without children<sup>8</sup>. Baby boomers are also beginning to transition to retirement. These two factors are expected to lend increasing support towards smaller, lower priced housing options like multi-unit dwellings over the medium to long-term.

### Mortgage rates are expected to remain unchanged until the latter months of 2015

Consistent with the view of Canadian economic forecasters, CMHC expects interest rates to remain unchanged until the latter half of 2015 and then begin to increase gradually. Gradual increases in mortgage rates from historic lows are not expected to significantly impact housing demand.

According to CMHC's base case scenario for 2014, the average for the one-year posted mortgage rate is forecast to be between 3.0 per cent and 3.25 per cent, while the average for the five-year posted mortgage rate is anticipated to be between 5.0 per cent and 5.5 per cent. For 2015, the average for the one-year posted mortgage rate is expected to rise and be in the 3.20 per cent to 4.0 per cent range, while the average for the five-year posted mortgage rate is forecast to be within the 5.25 per cent to 6.0 per cent range.

## Risks to the Outlook

While the consensus forecast is for a soft-landing for the Canadian housing sector, there are risks to the Canadian housing sector outlook. First, there is some evidence of a short-term buildup of supply in select housing markets, particularly in the multi-unit segment. Second, household debt-levels, while appearing to have stabilized, continue to be high relative to historical standards.

Given that Canada is an open economy, there are a number of global market risks to consider as well that could put added pressure on housing market supply imbalances and the ability of households to service

<sup>7</sup> CMHC uses publicly available information and the consensus among major Canadian forecasters regarding economic assumptions.

<sup>8</sup> See the 2013 edition of CMHC's Canadian Household Observer, Chapter 1, Page 8 for more detail.

their debt, through their impact on household incomes, employment and lending rates, were they to occur.

- There is a risk of a slowdown in China coupled with uncertainty regarding the stability of the Chinese banking system.
- Uncertainty remains in emerging markets between the possible interaction of financial vulnerabilities in some economies and prospective monetary policy normalization in the United States. Normalization is the unwinding of the measures put in place to combat the previous U.S. real estate crisis and recession.
- In the Euro area, there are deflationary concerns due to prolonged low inflation and the fragile economic recovery. In addition, the situation in the Ukraine and Russia could exert further drag on the Euro-area recovery.
- There is uncertainty in regards to the strength of the post-recession recovery in the U.S. In its July 2014 Monetary Policy Report (MPR), the Bank of Canada (BOC) downgraded United States GDP growth forecasts to 1.6 per cent for 2014, compared to 2.8 per cent in its April MPR. A less optimistic economic growth forecast could weaken Canadian economic performance, particularly exports. To date, growth in Canadian non-energy exports has proven to be elusive. The precise timing of the realignment in growth is highly uncertain and could take longer than currently anticipated.
- Recent upward movements in Canadian consumer prices could lead to pressure to raise lending rates earlier than currently anticipated and would likely translate to rising mortgage rates.

However, in its July 2014 MPR, the BOC indicated that it expects recent upward price movements to only be temporary, as the Canadian economy has yet to reach full capacity. In any case, the BOC noted in its June 2014 Financial System Review that a significant housing market correction would require a market event leading to declining household incomes and rising unemployment. Gradual increases in mortgage rates, in and of themselves, are not expected to have a significant impact on housing demand.

# TRENDS AT A GLANCE

## Key factors and their effects on the housing sector

<b>Mortgage rates</b>	Mortgage rates will remain low by historical standards and supportive of housing demand.
<b>Employment</b>	Based on the consensus among prominent Canadian forecasters, CMHC expects that employment will grow by 0.9 per cent in 2014 and 1.6 per cent in 2015.
<b>Income</b>	Income is expected to increase modestly as economic conditions in Canada improve. As a result, income growth will remain supportive of housing demand over the forecast horizon.
<b>Net migration</b>	Canada's economy is expected to continue to attract a high level of immigrants. As a result, the level of net migration will remain above its historical average and help support Canada's housing sector.
<b>Demographics<sup>9</sup></b>	By the end of the forecast horizon, all regions but Quebec will see the growth rate of their population aged 25 to 34 decline, according to Statistics Canada's projections. By the end of the current decade, the growth rate of population aged 25 to 34 will be negative or very close to zero in most regions. This, along with general population aging, will impact the type and tenure of housing demand.
<b>Resale market</b>	Overall market conditions remain balanced and house prices are generally in line with underlying demographic and economic factors. As a result, the average MLS® price is expected to increase by 4.5 per cent in 2014 and 1.8 per cent in 2015.
<b>Stock of completed and unabsorbed units</b>	The stock of completed and unabsorbed housing units to population is above the historical average, but has been declining since May 2013.

<sup>9</sup> Demographic forecasts are based on Statistics Canada's medium-growth population projection.

# British Columbia

## Overview

Business investment, as well as increased exports driven by stronger demand from the U.S. for British Columbia commodities by 2015, will bolster the provincial economy. The British Columbia economy is forecast to grow 2.3 per cent in 2014 and 2.8 per cent in 2015, compared to an estimated 1.8 per cent increase in 2013. Accompanying employment gains and ongoing population growth will support consumer demand for goods and services.

Employment growth is forecast to generate demand for housing this year and next. Employment increased modestly during the first half of 2014, however a notable shift from self-employed to paid private employment is a sign of a strengthening labour market. First half employment gains were concentrated in the Vancouver Census Metropolitan Area (CMA), providing fundamental support to the province's largest housing market. Total employment is expected to grow 0.8 per cent in 2014 and 1.8 per cent in 2015.

Population growth will contribute to increased home sales, house price growth and lower rental vacancy rates. British Columbia's population grew 1.2 per cent on an annual basis in the first quarter of 2014 due to a larger-than-forecast increase in net migration. Employment opportunities, reflected by a relatively low unemployment rate, are anticipated to draw people from other countries and provinces, with total net migration forecast at 42,400 people in 2014 and 41,600 people in 2015.

While housing demand will be supported by an improvement in the fundamentals, total housing starts will

Figure 2

\*The point forecast for provincial total housing starts is 27,500 for 2014 and 27,900 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 26,700-28,300 units for 2014 and 24,900-30,900 for 2015.

remain relatively stable due to a well-supplied resale market and inventory of newly completed and unabsorbed units. Housing starts are forecast to reach 27,500 units in 2014 and 27,900 units in 2015.

## In Detail

**Single Starts:** Single-detached home starts are forecast to increase to 9,200 units in 2014 and 9,500 units in 2015. Based on historical data, single-detached homes tend to be the most prevalent housing type in most areas outside of Vancouver and Victoria. As the economy and employment improve, expect a modest shift to single-detached home starts.

**Multiple Starts:** Multi-unit housing starts are projected to total 18,300 units in 2014 and 18,400 units in 2015. Starts of apartment condominiums, townhomes and semi-detached homes are forecast to edge lower, as the combination of multi-unit homes under construction, the existing inventory of completed and unabsorbed units and a well-supplied resale market are expected to satisfy some of the demand for this type of housing.

**Resales:** Resale markets are expected to remain balanced. Existing home sales, as measured by MLS® transactions, are projected to increase to 78,200 resales in 2014 and 78,700 in 2015.

**Prices:** The MLS® average price is forecast at \$553,300 in 2014. The MLS® average price was lower in British Columbia and Vancouver in the second quarter of 2014 compared to the first quarter, and further moderation in price is anticipated in the third quarter as sales shift to less expensive home types. The MLS® average price is forecast at \$556,500 in 2015.

# Alberta

## Overview

Economic growth in Alberta is expected to lead all provinces in Canada over the next two years. GDP is forecast to increase by 3.8 per cent in 2014 and 3.0 per cent in 2015. Higher oil and natural gas prices this year will help increase the value of energy exports and encourage investment in the energy sector. Consumer spending is also projected to rise, supported by strong population growth and rising wages.

Labour market conditions in Alberta are projected to remain favourable as the economy generates employment growth of 2.8 per cent in 2014 and 2.2 per cent in 2015. Alberta's attraction of new migrants will help expand the labour force and keep the unemployment rate close to its current levels. The unemployment rate in Alberta is projected to average 4.6 per cent in 2014 and 4.5 per cent in 2015.

After two consecutive years of record net migration, inflows of migrants to Alberta are projected to moderate as economic growth in other jurisdictions improve relative to Alberta. Net migration to Alberta will decline from the record of 102,465 people in 2013 to 79,000 in 2014 and to 64,000 in 2015.

## In Detail

**Single Starts:** Single-detached starts are forecast to increase from 18,431 units in 2013 to 19,100 in 2014 and then moderate to 18,800 units in 2015. With active listings in the resale market below that of last year, some home buyers will look to the new home market to meet their needs,

Figure 3

\*The point forecast for provincial total housing starts is 38,600 for 2014 and 36,800 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 37,500-39,700 units for 2014 and 32,700-40,900 for 2015.

helping to lift starts this year. By 2015, the declining level of migration, combined with more listings in the resale market and rising new home inventory, are expected to moderate new production. Listings are expected to rise because housing prices in some markets have surpassed prices that last peaked in 2007/2008, thus providing an opportunity for homeowners to move up.

**Multiple Starts:** Multi-unit starts are projected to rise from 17,580 units in 2013 to 19,500 in 2014 and then ease to 18,000 units in 2015. The lift in multi-unit construction this year is primarily due to increased production in Calgary, where multi-unit starts are projected to attain a 33-year high. The multi-unit inventory has been trending lower over the past two years encouraging new production.

**Resales:** MLS® sales are projected to increase to 69,900 in 2014 and to 71,900 in 2015. A large inflow of migrants over the past few years has generated momentum for housing demand. This will help lift sales over the forecast period, as will

employment growth and income gains. While MLS® sales are projected to increase in 2015, growth will become more subdued as migration continues to ease.

**Prices:** The average MLS® sales price is projected to increase to \$396,800 in 2014 and then to \$407,000 in 2015. A higher level of demand relative to supply will help lift resale prices in 2014. As 2014 progresses, new listings are expected to increase and continue rising into 2015.

# Saskatchewan

## Overview

Saskatchewan's economy is forecast to grow by 2.3 per cent in 2014 and 2.5 per cent in 2015. Saskatchewan is benefiting from population growth of nearly 2.0 per cent, ranking only behind Alberta among all Canadian provinces. This, combined with continued wage gains, is helping to increase consumer spending. Offsetting some of this growth is a lower level of investment spending and international exports, despite gains in exports of energy products.

Saskatchewan's economy is expected to generate employment gains and keep the unemployment rate low in the province. Employment growth is forecast to be 1.8 per cent in 2014 and 1.7 per cent in 2015. The unemployment rate is forecast to be 4.2 per cent this year and 4.4 per cent in 2015, which is low compared to the national average.

Economic opportunity and tight labour market conditions in Saskatchewan will continue to be a draw for migrants. Saskatchewan's population is forecast to increase by an additional 13,800 people from net migration in 2014 and 11,300 in 2015. While net migration to the province is expected to continue to moderate from the record of 15,974 in 2012, it will remain an important driver of economic growth and housing demand in Saskatchewan.

## In Detail

**Single Starts:** Saskatchewan's single-detached starts are forecast to decline to 3,900 units in 2014, due to elevated inventory and a moderation in net migration to the province. Barring a significant draw down on inventory, a

Figure 4

\*The point forecast for provincial total housing starts is 7,900 for 2014 and 7,500 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 7,700-8,100 units for 2014 and 6,700-8,300 for 2015.

further moderation to 3,800 units is projected for 2015 as net migration slows further and the new home sales compete with a well-supplied resale market.

**Multiple Starts:** Multi-unit starts are expected to moderate to 4,000 units in 2014 as builders focus on reducing existing inventory, which is elevated and rising. A further reduction to 3,700 units is projected for 2015 due to elevated supply and competition from Saskatchewan's resale market.

**Resales:** Supported by continued employment growth and population gains, provincial MLS® sales are forecast to reach 13,700 units in 2014, slightly higher than the level achieved last year. 2015 will see a minimal change from 2014. Listings over the forecast period will continue to offer a wide selection to prospective home buyers.

**Prices:** The average MLS® price in Saskatchewan is projected to rise to \$295,600 in 2014 and \$303,000 in 2015. While market conditions are expected to remain balanced over

the forecast period, Saskatchewan is experiencing rising supply relative to demand, which has contributed to a moderation in price growth since 2012.

# Manitoba

## Overview

Economic growth in Manitoba is projected to remain near the national average with GDP projected to rise by 2.1 per cent in 2014 and 2.4 per cent in 2015. Steady population growth and rising wages will help increase consumer spending. International exports are also expected to rise with an expanding U.S. economy by 2015. On the other hand, flooding in Manitoba has temporarily disrupted some economic activity. In addition, moderating investment intentions this year will hold back some economic growth.

While the economy is expanding in 2014, employment growth is projected to be less than one per cent and will be below the national average. Flooding in Manitoba has impacted some economic activity and employment while provincial government lay-offs have also been a factor. Full-time and part-time employment is expected to improve next year. With a faster expanding economy in 2015, economic activity will generate employment growth of 1.2 per cent. While employment growth will trail the national average over the forecast period, the unemployment rate will remain lower. In 2014, the unemployment rate will average 5.5 per cent and edge down to 5.4 per cent in 2015.

Net migration is projected to moderate to 8,400 in 2014 and 8,300 in 2015. International migration will be a key driver of migration gains.

Figure 5

\*The point forecast for provincial total housing starts is 6,400 for 2014 and 6,500 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 6,200-6,600 units for 2014 and 5,800-7,200 for 2015.

## In Detail

**Single Starts:** Construction of new single-detached homes in Manitoba is expected to moderate to 3,400 units in 2014 before increasing slightly to 3,500 units in 2015. Higher new home inventories and competition from the resale market will prompt the decrease in 2014. As inventories are drawn down and employment gains strengthen, builders will moderately increase production in 2015.

**Multiple Starts:** Multi-unit starts will moderate to 3,000 units in 2014 and remain stable at this level in 2015. Builders will respond to increasing inventories and higher rental vacancy rates, resulting in a stabilization of housing starts. Nevertheless, multi-unit starts will remain above the preceding five-year average, supported by population growth among younger households and employment in the 20-34 age group.

**Resales:** Contrary to the new home market, the MLS® sales market will see a moderate increase over the forecast period with 13,900 transactions in

2014 and a further 14,100 in 2015. Listings in the resale market will offer more selection to prospective home buyers looking for an alternative to the new home market. The expected increase in sales will correspond with moderate increases in population and employment.

**Prices:** The average residential MLS® price in Manitoba is forecast to increase to \$266,200 in 2014 and to \$273,800 in 2015. An increasing number of listings will support balanced market conditions and a more modest pace of price growth than in previous years.

# Ontario

## Overview

Moving forward, Ontario economic expansion is set to match the rate of growth in Canada over the 2014-15 forecast horizon. Overall, the province's economy is forecast to grow by 2.2 in 2014 and 2.5 per cent in 2015. Meanwhile, business investment is poised to grow as corporate profits and business sentiment continue to grow. Growth in Ontario business investment hinges largely on the state of the global economy. An improving global economy by 2015, led by growth in the U.S., combined with a low Canadian dollar, will support Ontario's export performance.

An improving economy will boost Ontario employment growth from 0.9 per cent in 2014 to 1.8 per cent by 2015. Ontario economic sectors better positioned to support growing U.S. business and consumer spending, such as information technology, machinery manufacturing, automotive and building material industries, should register stronger employment gains. Ontario's unemployment rate should trend lower and reach 7.0 per cent by 2015.

With respect to demographics, migratory outflows from Ontario will lessen as a rebalancing of economic growth takes hold across the country in the years ahead. In fact, Ontario's net loss of interprovincial migrants was at one of its lowest levels over the past decade during the fourth quarter of 2013. Net migration to Ontario will rise from 82,500 to 93,900 net migrants by 2015. With growth in net international migration expected to double from 5.0 per cent in 2014 to 10.0 per cent in 2015, this will have a positive impact on the demand for housing.

Figure 6

\*The point forecast for provincial total housing starts is 57,100 for 2014 and 57,100 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 55,500-58,600 units for 2014 and 50,900-63,300 for 2015.

## In Detail

**Single Starts:** Single-detached starts will slow over the forecast horizon and reach 21,400 and 20,400 units in 2014 and 2015, respectively. A number of factors will weigh on the sector, including lower single-detached affordability should interest rates rise and efforts geared towards more housing densification.

**Multiple Starts:** After slowing by over 26 per cent in 2013, multi-unit home construction will slow further to 35,700 units in 2014 before stabilizing at 36,700 units in 2015. Rising home prices will shift demand to less expensive multi-unit construction by the second half of 2015. Row housing will benefit from this shift, so will apartment ownership and rental accommodation. Apartment ownership and rental demand will be supported by immigrants and younger households that are more price sensitive, as well as a growing pool of baby boomers nearing retirement.

**Resales:** MLS® existing home sales will reach 197,900 units this year and 202,500 units in 2015. With gradually rising mortgage carrying costs, the existing home market will gain ground

on the new home market as demand rotates to lower priced resale housing.

**Prices:** Ontario MLS® average home prices will reach \$424,500 in 2014 and \$433,300 in 2015. A slower pace of average price growth will occur over the forecast horizon thanks to a more balanced housing market and a shift in demand to lower priced resale housing.

# Quebec

## Overview

In Quebec, moderate economic and employment growth will hold back demand for existing and new homes in 2014 and 2015. In addition, relatively high inventories of new and existing dwellings will constrain the number of housing starts. The expected levels of demand and supply will translate into marginal price growth in most resale markets.

In the next two years, economic growth will stem from consumer spending and recovering private investment. Public expenditures will remain limited by balanced budget objectives while net exports gain some momentum as U.S. demand strengthens in 2015. As a result, GDP is forecast to grow 1.7 per cent this year and 2.0 per cent in 2015. As private investment increases gradually, the impact on labour markets will be felt more substantially next year. Employment is expected to grow by 0.3 per cent in 2014 and 1.2 per cent in 2015. The unemployment rate is forecast to be 7.6 per cent this year and at 7.3 per cent in 2015.

On the demographic front, total net interprovincial migration will continue to be hindered by more attractive labour markets in other provinces. However net international migration will remain sustained. Total net migration is expected to attain 38,000 people this year and 44,000 people in 2015. These levels will thus have a positive impact on demand in Quebec's rental markets. During this period, moderating formation of younger households will cool first-time buying, and population aging will continue to prompt some older households to downsize.

Figure 7

\*The point forecast for provincial total housing starts is 38,400 for 2014 and 38,700 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 37,300-39,500 units for 2014 and 34,500-42,900 for 2015.

## In Detail

**Single Starts:** Demand for new single-detached homes will be influenced by moderate employment growth, the continued easing of the resale market and the trend toward apartment living. Starts in this category will decline to the 12,000 level in 2014. As the resale market begins to tighten, demand for new single-detached homes will increase, and translate into 13,300 starts next year.

**Multiple Starts:** After a decline in 2013 to a level that is more in line with the demographic trends, multi-unit housing starts will remain relatively stable this year and next. This market segment will continue to be supported by its relative lower price in comparison to new single-detached homes. Further growth will be held back by relatively high levels of supply of new and resale housing, which will limit the need for additional building. Starts of multi-unit dwellings will be 26,400 units in 2014 and 25,400 in 2015.

**Resales:** Sales of existing houses recorded by Centris<sup>®10</sup> should decline

slightly this year, in line with weaker employment growth. A total of 69,800 transactions are expected this year. In 2015, 73,200 Centris<sup>®</sup> resales are forecast as a more robust labour market pushes up demand.

**Prices:** With lower demand and higher supply, prices of resale homes will post marginal growth during the forecast horizon. A gradual return to more balanced market conditions will keep price growth between the one and two per cent mark this year and next. As a result, the average price recorded by Centris<sup>®</sup> will reach \$267,400 this year and \$270,200 in 2015.

<sup>10</sup> The Centris<sup>®</sup> system contains all the listings of Quebec real estate brokers.

# New Brunswick

## Overview

Economic growth in New Brunswick will remain the lowest among the four Atlantic Provinces over the forecast period. Growth is expected to reach 0.5 per cent in 2014 and 0.8 per cent in 2015. The current challenges for the province stem, in part, from reduced private and public sector investment. The natural resources sector, which is one of the main economic drivers in the province, remains weak as the recovery south of the border is not expected to take hold until 2015. As a result exports have declined so far this year.

Labour market conditions will be impacted by the economic weakness as employment growth is projected to reach just 0.3 per cent in 2014. By 2015, employment growth is expected to rise 0.8 per cent as economic conditions improve. As a result of employment rising faster than the growth in the labour force, the unemployment rate will decline to 10.3 per cent in 2014 and 10.0 per cent in 2015.

The growth prospects for the province also continue to be impacted by a lack of population growth and a negative outlook for net migration. International migration is expected to be 600 people for 2014 and 1,000 for 2015. Negative interprovincial migration of 2,875 people in 2014 and 1,000 in 2015, due to better opportunities in other provinces, will result in net migration remaining negative for 2014 and 0 for 2015.

## In Detail

**Single Starts:** Rising out-migration from the province's major centres to other parts of Canada as a result of

Figure 8

\*The point forecast for provincial total housing starts is 2,300 for 2014 and 2,160 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 2,240-2,360 units for 2014 and 1,920-2,400 for 2015.

weakening prospects for employment will continue to impact the demand for new homes over the forecast period. As a result single starts are expected to decline over nine per cent to 1,245 units in 2014 and to 1,180 units in 2015.

**Multiple Starts:** Stronger activity focused on the rental market since the beginning of 2010, particularly in Moncton and Fredericton, has resulted in an increase in supply. However, rental demand is expected to decline over the forecast due to continuing negative net migration. This will exert upward pressure on vacancy rates and result in a pullback in apartment construction over the forecast. Multi-unit starts are expected to decline to 1,055 units in 2014, with a further drop to 980 units in 2015.

**Resales:** The existing home market will continue to slow in 2014 with a moderate pullback in sales. Although listings have dropped slightly, levels remain elevated. This has resulted in buyers' market conditions. With only a small improvement in employment expected over the forecast period and

continuing negative net migration, the demand for existing homes is forecast to drop. MLS® sales should decline to 6,000 units in 2014, with a further decline to 5,800 units in 2015.

**Prices:** The inventory of available homes is expected to remain at historically high levels in the province's large urban centres in 2014 and 2015 as a result of weaker demand. This will continue to impact price growth. The MLS® average price is expected to remain relatively stable in 2014 at \$162,500 with a small decline to \$162,000 in 2015.

# Nova Scotia

## Overview

Nova Scotia is expected to record economic growth of 0.8 per cent in 2014 and 1.5 per cent in 2015. Economic conditions are expected to improve as continued site development and pre-engineering work at the Halifax shipyard this year will be followed by actual shipbuilding activity in 2015. Furthermore, a steady rise in the production of natural gas and the resulting increase in exports could contribute to a stronger economic outlook in 2014 and 2015.

Labour market conditions will remain weak in 2014. Employment is expected to decline by 0.5 per cent in 2014, followed by a small rise of 0.6 per cent in 2015 due to a forecasted increase in private sector investment activity. The unemployment rate is expected to decline to 8.5 per cent in 2014. Looking ahead to 2015, the unemployment rate is expected to experience a small increase to 8.7 per cent.

In 2013, interprovincial migration was negative with 4,025 people leaving the province for other parts of Canada for relatively better opportunities. During 2014 and 2015, interprovincial migration is forecast to be 3,350 in 2014 and 1,200 in 2015, largely due to poor labour market conditions relative to other provinces. International migration, or immigration, added close to 1,200 persons in 2013. For this year, the expectation is for 1,050 immigrants before rebounding to 1,800 in 2015. As a result, total net migration will remain negative in 2014 at 2,300 before turning positive in 2015 with a net gain of 600 people.

Figure 9

\*The point forecast for provincial total housing starts is 3,350 for 2014 and 3,300 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 3,260-3,440 units for 2014 and 2,940-3,660 for 2015.

## In Detail

**Single Starts:** In 2014, negative net migration from the province and an aging population base will continue to contribute to reduced demand for new, single-detached units. Expect single starts to decline to 1,400 units this year from 1,639 in 2013. Next year, improving economic and employment prospects will push single-detached starts to 1,550 units.

**Multiple Starts:** Multi-unit starts in Nova Scotia continued to record levels above the ten-year average last year. In 2014 and 2015, continued strength in the apartment market in Halifax will support overall provincial multi-unit activity. Demand for apartment living will continue to be driven by the evolving needs of the province's aging population base. Expect apartment starts to total 1,350 units in 2014 and 1,150 units in 2015. In the semi-detached and row segments of the market, starts are forecast at 600 units in both 2014 and 2015.

**Resales:** MLS® sales in Nova Scotia are expected to be 8,700 units in 2014. In 2015, expect moderate economic and

employment growth to contribute to increased activity in the resale market, pushing sales up to 9,100 units.

**Prices:** Last year the average MLS® price declined close to two per cent. This year, expect the average price of an existing home in the province to decline further by 0.5 per cent to \$216,000. In 2015, an uptick in demand will push resale prices up to \$217,500.

# Prince Edward Island

## Overview

The economy of Prince Edward Island is forecast to grow by 0.6 per cent in 2014 and 0.9 per cent in 2015. Economic growth will be the result of an improving outlook for aerospace, biosciences and seafood processing industries. This will be offset, somewhat, by weakness in the public sector as well as accommodation and services.

Employment is forecast to remain flat in 2014 with a rise of 0.6 per cent in 2015. Labour force growth is expected to remain below employment growth in both 2014 and 2015, resulting in the unemployment rate declining in both years to 10.9 per cent and 10.8 per cent, respectively.

The economic prospects for the province will continue to be impacted by slowing population growth as international immigration has fallen back to levels last reported in 2007. For 2015 there will be a pick-up in net migration to 500 people as a steady gain in international migration of 900-1,000 per year is offset by a smaller decrease in interprovincial out-migration of 400 in 2015 compared to a loss of 715 in 2014.

## In Detail

**Single Starts:** The demand for new single-detached homes is expected to slightly weaken. Accordingly, single starts will move lower to 230 units while 2015 will see a forecasted 235 units. The majority of starts will continue to be concentrated in and around Charlottetown.

Figure 10

\*The point forecast for provincial total housing starts is 475 for 2014 and 450 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 460-490 units for 2014 and 400-500 for 2015.

**Multiple Starts:** Multi-unit starts activity is forecast to continue declining over the forecast period as the market continues to absorb the recent rise in the inventory of new units. Multi-unit starts will slow to 245 units in 2014, before declining further to 215 units in 2015.

**Resales:** The continued pullback in net migration from the 2011 peak, due to a more negative outlook for interprovincial migration and a weak employment forecast, will result in slowing sales activity in both 2014 and 2015. MLS® sales are forecast to reach 1,250 units in 2014 and 1,175 units in 2015.

**Prices:** The slowdown in sales activity resulting from softer demand and an increase in listings over the forecast period will impact house prices. The average MLS® sales price is expected to see moderate growth of 0.6 per cent to \$157,000 in 2014 with a small decline to \$156,500 in 2015.

# Newfoundland and Labrador

## Overview

Newfoundland and Labrador will be the Atlantic Canada leader in economic growth in 2014 and 2015 as GDP is expected to grow by 1.2 per cent this year and 1.5 per cent next year. The province's economic future will be supported by projects focused on energy and resource investment over the forecast horizon.

The province's labour market conditions are softening. Employment is expected to decline by 0.2 per cent in 2014 with a rebound to 1.0 per cent growth in 2015, as the province begins the transition to providing new manufacturing capacity within the resource sector. The unemployment rate is forecast to be 10.8 per cent this year and remain stable in 2015, with both employment and labour force growth around 1.0 per cent.

Following two years of declines, net migration is expected to turn positive in 2015, due to an increase in interprovincial migration. Immigration will begin to contribute positively to population growth in 2015 by adding 500 people, after a decline of 200 people in 2014.

## In Detail

**Single Starts:** Demand for housing will remain soft over the forecast period as a result of a reduction in net migration coupled with a weaker employment outlook. This will result in the single-detached housing market declining to 2,050 single starts in 2014 and 2015.

**Multiple Starts:** Multi-unit construction is expected to rise moderately in 2014

Figure 11

\*The point forecast for provincial total housing starts is 2,700 for 2014 and 2,650 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 2,615-2,765 units for 2014 and 2,350-2,950 for 2015.

after declining significantly in 2013. The forecast is for a small increase to 650 units in 2014, followed by a decline to 600 units in 2015. Current interest in new multi-unit construction is likely to grow as recent projects have been absorbed quickly.

**Resales:** Although wage growth remains positive in the province, the expectation is for a small decline in sales because of the weaker employment outlook. MLS® sales will decline over the forecast period to 4,050 in 2014 and 4,000 in 2015.

**Prices:** Prices are expected to rise close to the rate of inflation, due to a softening of demand and elevated inventory levels. Average MLS® house prices are expected to rise to \$290,000 in 2014 and \$295,000 in 2015, representing gains of 2.4 per cent and 1.7 per cent. In contrast, 2013 saw growth of 5.3 per cent.

Figure 12

\*The point forecast for total housing starts is 184,800 for 2014 and 183,100 for 2015. Economic uncertainty is reflected by the current range of forecasts, which varies from 179,600 to 189,900 units for 2014 and from 163,000 to 203,200 units for 2015.

n.a.: Data not available.

\* All indicators are seasonally adjusted and annualized except the New Housing Price Index and the Residential Investment Deflator, which are only seasonally adjusted, and housing completions and the 1-year and 5-year mortgage rates, which are not adjusted or annualized.

\*\* Residential Investment includes outlays for new permanent housing, conversion costs, cost of alterations and improvements, supplementary costs, and transfer costs.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at [www.cmhc.ca](http://www.cmhc.ca) or follow us on [Twitter](#), [YouTube](#) and [Flickr](#).

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to [www.cmhc.ca/housingmarketinformation](http://www.cmhc.ca/housingmarketinformation)

For more information on MAC and the wealth of housing market information available to you, visit us today at [www.cmhc.ca/housingmarketinformation](http://www.cmhc.ca/housingmarketinformation)

To subscribe to priced, printed editions of MAC publications, call 1-800-668-2642.
