^{**} Trend: Six-month moving average of the SAAR

¹The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Hamilton CMA Total Housing Starts Trend Unchanged

Housing starts in the Hamilton Census Metropolitan Area (CMA) were trending at 3,257 units in October, almost unchanged from 3,293 units in September. The trend is a six month moving average of the monthly seasonally adjusted annual rate (SAAR) of housing starts. While the trend in Hamilton total housing starts remained stable in October 2014, strength varied by dwelling type. A tight resale market, with listings of affordable homes in short supply, encouraged home buyers to buy new. Townhouse starts were up for the sixth consecutive month in October, indicating that those buying in the affordable price ranges are turning to this more affordable ground-oriented home type in the new home market.

The standalone monthly SAAR was 2,166 units in October, down from 4,759 units in September. This month's decline in the SAAR measure was mainly due to fewer apartment starts. Year-to-date, apartment starts were 460 units, down 30 per cent compared to the first ten months of 2013. Single-detached housing starts were down 1.2 per cent during the same ten-month period.

According to Statistics Canada labour force survey data, full-time employment in Hamilton grew 6.8 per cent in October from a year earlier, marking the ninth consecutive monthly gain. The October increase in full-time employment was broad based among all age groups, indicating that employers are gaining confidence in Hamilton's economic recovery. Strong full-time job creation among the key home buying age group (25 to 64) supported homeownership demand. Meanwhile, higher full-time

- * SAAR1: Seasonally Adjusted Annual Rate.
- ** Trend: Six-month moving average of the SAAR

employment in the 15 to 24 age group encouraged household formation among young adults. A higher level of household formation among this group tends to increase overall rental housing demand, as young adults are predominantly renters. Hamilton's unemployment rate fell to 5.6 per cent in October 2014, the lowest since May 2011. Average weekly earnings grew three per cent during the first ten months of 2014, outpacing the general rate of inflation and another factor supporting homeownership demand.

Brantford CMA Total Housing Starts Trending Down

Housing starts in the Brantford CMA were trending down at 415 units in October compared to 434 units in September, due to weaker single and semi-detached housing construction. However, single-detached housing starts remained strong at 200 units in the first ten months of 2014, up 1.5 per cent from the same period in 2013. Move-up buyers coming from

the more expensive neighbouring municipalities continue to support single-detached housing demand in Brantford. Typically, move-up buyers are in the 45 to 54 age group.

Existing home sales in the Brantford CMA increased by 3.5 per cent in October 2014 compared to the same month a year ago. The increase was due to stronger single-detached home sales which completely offset the sales decline in semi-detached, townhouse and condominium apartment dwellings. As in the new home market, the higher existing single-detached home sales reflected a strong housing demand coming from move-up buyers.

Higher employment and low mortgage rates have also boosted housing demand in Brantford. Full-time employment was up 0.9 per cent in October 2014 compared to the same month a year ago, marking the sixth consecutive year-over-year increase.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca or follow us on Twitter, YouTube and Flickr.

You can also reach us by phone at I-800-668-2642 or by fax at I-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient!
