#### HOUSING MARKET INFORMATION

# HOUSING NOW Greater Toronto Area

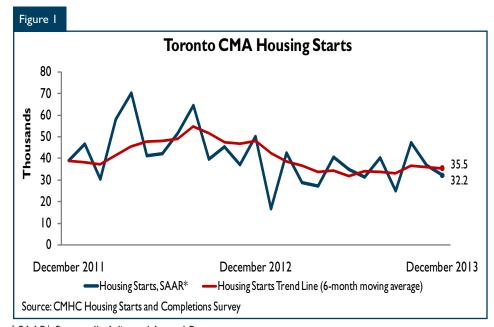

CANADA MORTGAGE AND HOUSING CORPORATION

## Date Released: January 2014

## **Highlights**

- Apartment sales recovered in the fourth quarter, allowing projects to start construction.
- Existing home sales were down from the third quarter peak, but the market remained tight.
- Job growth in 2013 was the strongest in more than a decade.

<sup>\*</sup> SAAR1: Seasonally Adjusted Annual Rate.

<sup>&</sup>lt;sup>1</sup> The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels. The trend is a six-month moving average of the monthly SAAR.

## **New Home Market**

Seasonally adjusted and annualized (SAAR) monthly housing starts in the Toronto Census Metropolitan Area (CMA) trended at 35,500 in December, roughly the same as in November. The standalone SAAR was 32,200 for December. The quarterly SAAR for total starts was 38,400 in the fourth guarter of 2013; this was significantly higher than the previous three quarters of 2013. The increase was almost entirely due to apartment starts. Starts of singles and semis declined in the fourth quarter, while townhouse starts were up only modestly.

New home sales followed a similar pattern. Low rise sales had already begun to recover in the third quarter, but it was a surge in apartment sales which resulted in the strong sales increase in the fourth quarter. These supported the increase in apartment starts since they allowed a number of projects which had begun selling in 2011 and 2012 to reach their sales targets required for construction to begin. The average time from sales launch to construction start fell from nearly 27.5 months in the third quarter to just over 21 months in the fourth. Despite the second half recovery, sales in 2013 were lower than in 2012 for all dwelling types except semis. Very strong price growth for singles pushed some demand towards the more affordable semis.

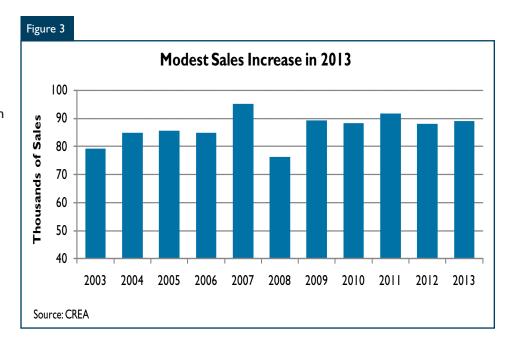

While the key factor supporting the sales recovery was employment growth, an upturn in migration also played a role. Net migration accounts for just under two-thirds of population growth in Toronto. While still high, it had been trending down, implying that population growth and consequently housing demand growth

was slowing. However, in the fourth quarter net migration was higher than it had been a year earlier for the first time in two years. Stronger migration usually does not contribute directly to sales of new home which are usually purchased by repeat buyers. Instead the increased demand is felt in the rental market and among the lower price ranges in the existing home market. Ultimately, migration allows

new home buyers to sell their current home in order to purchase a newlybuilt home.

All submarkets had fewer total housing starts in 2013 compared to 2012, but some submarkets had growth in certain housing types. The City of Toronto had growth in the single-detached and semi-detached housing type. Peel Region had growth

in all housing types with the exception of single-detached homes. And finally, Durham region had significant starts growth in semi-detached homes.

## **Resale Market**

Sales of existing homes in 2013 were up from 2012, supported by demand fundamentals such as historically low interest rates and strong gains in employment. However, following seasonal adjustment, MLS® sales in Toronto finished 2013 on a weaker note compared to the previous quarter. Sales had strengthened in the third quarter, as buyers pulled their purchases forward to pre-empt the effect of anticipated additional mortgage rate increases. With most demand satisfied and mortgage rates stabilizing, fourth quarter sales were down 5.5 per cent from the third quarter of 2013. However, compared to the same quarter last year, when the market was still adjusting to changes to mortgage insurance regulations, such as shorter amortization and maximum Gross Debt Service ratios, sales were up 11 per cent. Unusually severe weather conditions dampened sales activity in December.

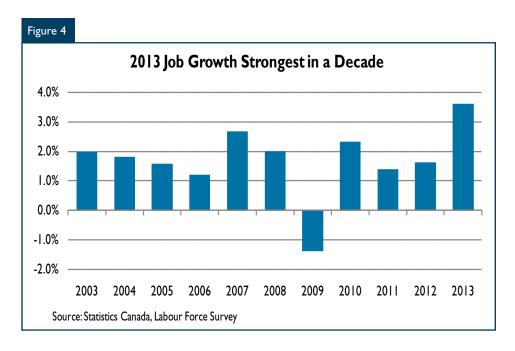

Employment eased in the fourth quarter, but the very strong gains of the first three quarters meant annual growth was the highest in more than a decade. The employment gains were mostly concentrated in Construction, Transportation and Finance and Insurance. Job gains were particularly strong among workers younger than 45, a group which had been hard hit by the economic downturn in

2008-2009. The strong employment growth meant the unemployment rate averaged 8.2 per cent in 2013, down from 8.6 per cent in 2012. With many younger workers with less experience being drawn back into the labour force, wage growth did not keep pace with employment growth. At 1.2 per cent, average wage growth in 2013 was the slowest in the decade. The relatively slow wage growth likely limited the impact of the very strong employment growth on housing demand.

The average resale price in 2013 in the GTA exceeded the half-a-million dollar value for the first time. Prices grew consistently throughout the year, with the highest price appreciation occurring in the third quarter. The pace eased somewhat in the fourth quarter, but on an annual basis, the average resale price increased by five per cent, well above income growth during the year. Drilling down by

region and dwelling type, we see the average price for singles showed the strongest appreciation. Durham Region led the GTA with an increase in average price of 6.2 per cent. Price growth was also above average in the City of Toronto, particularly for lowrise homes. For example, the average price for a semi-detached home was up 7.3 per cent in 2013 from 2012.

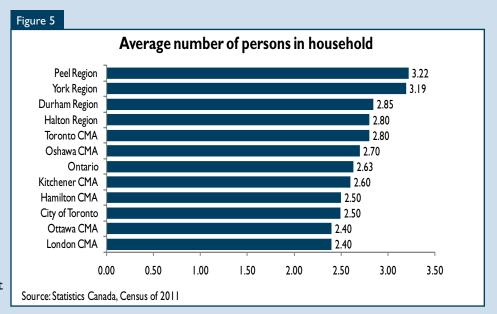

Seasonally adjusted new listings were down in the fourth quarter. Generally, price increases draw out more new listings but with a lag of several quarters. The price decline in the fourth quarter of 2012 likely played a role in the recent decline in new listings. This decline was slightly less than the decline in sales so the salesto-new-listings ratio eased slightly from the fourth quarter. However, with the ratio remaining close to 60 per cent, the market remained tight. Conditions were balanced but close to favouring sellers.

#### **What Affects Household Size?**

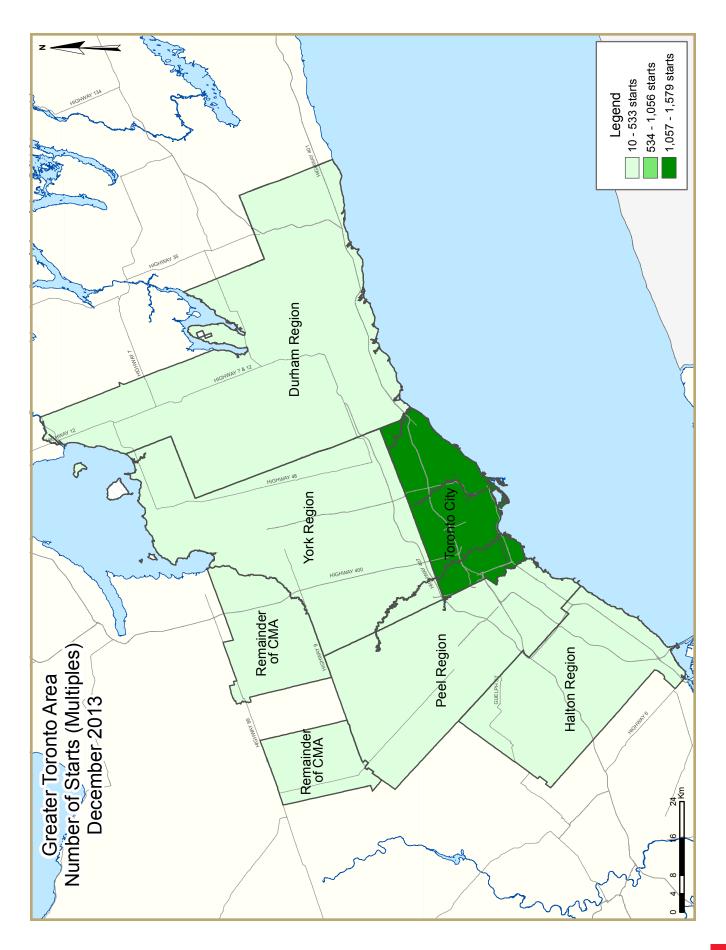

Housing demand depends not just on the size of a city's population but also the average household size in that city. The larger the average household size, the fewer the homes needed to house a given population. The average number of persons living in a household in Toronto at 2.8 persons is well above the Ontario average of 2.6. The higher cost of housing in Toronto encourages larger households, but there is more to the story. If we look at household size in the major submarkets of the GTA, we find that it is the regions surrounding the city which bring up average household

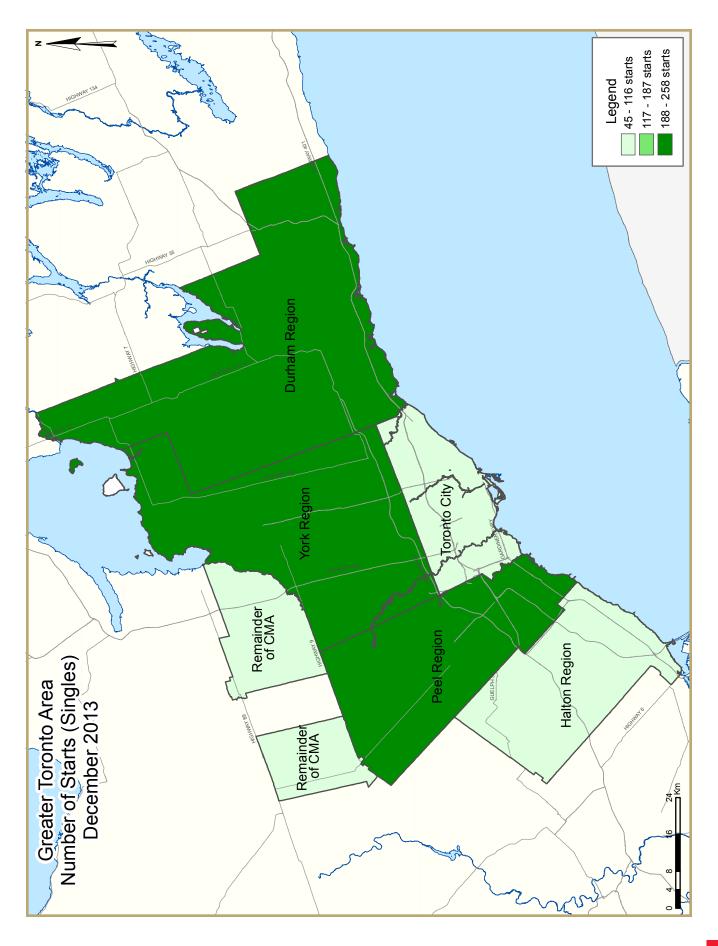

size in the Toronto CMA. York Region has a large household size and also relatively high housing costs. Another factor is the concentration of multi-family households. Multi-family households are prevalent in the areas surrounding the city of Toronto, such as Brampton, Vaughn, Richmond Hill and Markham. The larger share of these households may reflect higher proportions of immigrants in these areas relative to elsewhere in

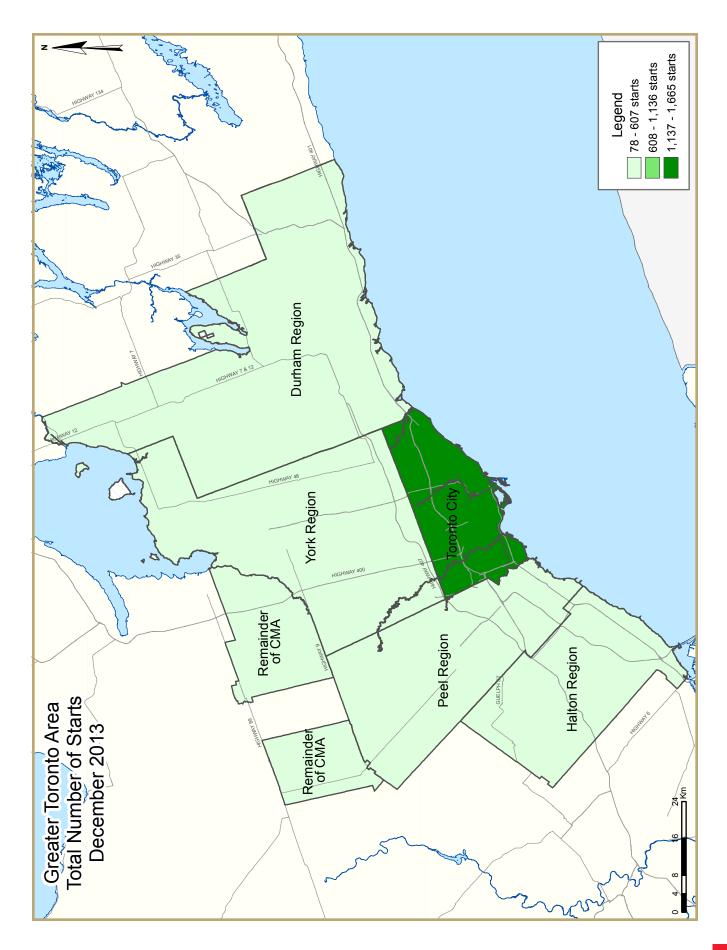

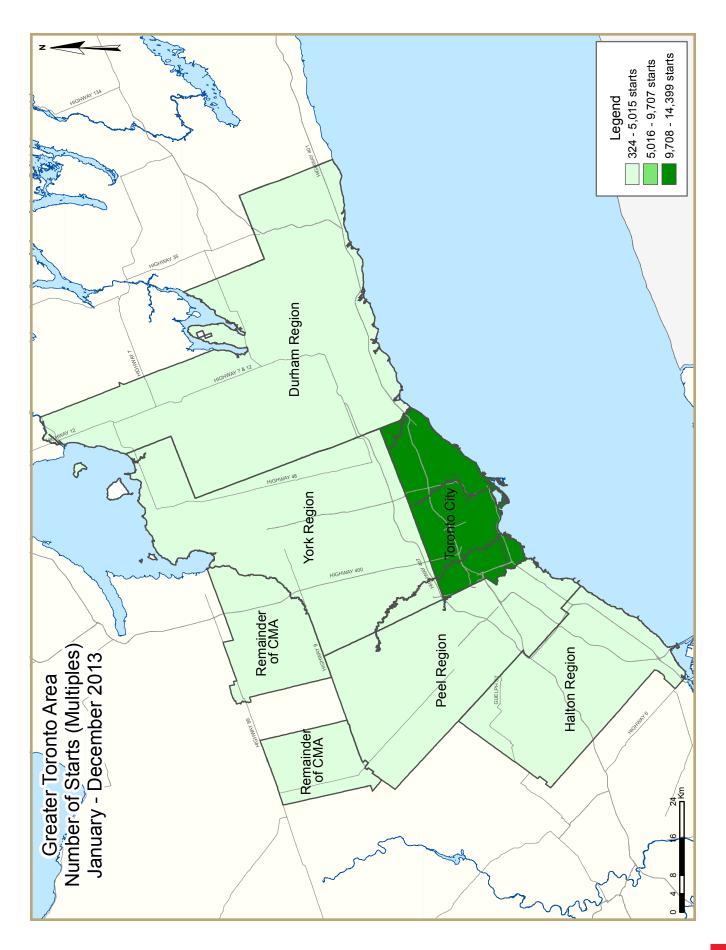

Canada<sup>1</sup>. These are also areas where young adults tend to live with their parents. The proportion of 20 to 29-year olds living with their parents in York Region is 73 per cent, the highest in Canada. The proportions in Peel, Halton and Durham are also among the highest in Canada. With children remaining with their parents longer, household size remains higher in these areas.

<sup>&</sup>quot;NHPI" means New Housing Price Index

<sup>&</sup>quot;CPI" means Consumer Price Index

<sup>&</sup>quot;SA" means Seasonally Adjusted

# **METHODOLOGY**

### **Starts & Completions Survey Methodology**

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

#### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

# STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## **DWELLING TYPES:**

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

# **GEOGRAPHICAL TERMS:**

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

# CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
