^{**}The trend is a six-month moving average of the monthly SAAR.

¹ The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Windsor Census Metropolitan Area (CMA) trended lower, at 724 units in March 2014 compared to 806 in December. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. The trend decreased due to a decline in townhouse starts and an unusually cold and long winter.

A total of 83 units were started in the first quarter of 2014, up 32 per cent from the 63 units started in the first quarter of 2013. Many of the homes started in the first quarter of 2014 were purchased several months ago. The colder than normal winter kept homebuyers inside which affected the resale market more than the new home market. Higher single-detached construction and more semi-detached and apartment starts boosted total starts. Row construction remained unchanged.

First quarter starts were pushed higher from a year ago by increased

construction in the City of Windsor. Forty per cent of the starts in the City of Windsor were multiple-family starts which include semi-detached, townhouse and apartments. A slight increase in new home construction also occurred in the Towns of LaSalle, Tecumseh and Lakeshore. Stable employment, immigration, and the relative affordability of housing in the Windsor CMA supported the demand for housing.

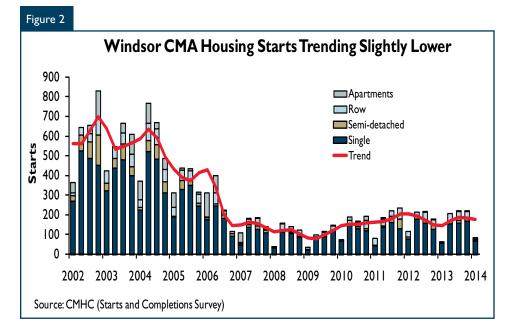

More than 75 per cent of the housing starts in the first quarter of 2014 were single-detached homes. Land is available for ground-orientated residential construction. The average price of a new single-detached home increased slightly by 1.9 per cent in the first quarter of 2014 to \$328,029 compared to the same period last year. Higher average prices for the newly completed and sold homes in all municipalities except Lakeshore pushed the average price higher. A higher percentage of homes sold in the \$200s contributed to the increased absorption price. No homes sold below \$200,000.

The labour market will support housing demand. Slight employment increases in the last year were supported by gains in the goodsproducing sectors, while jobs were shed in the services sector. In particular, increased employment in manufacturing and construction supported this job growth. The unemployment rate in the Windsor CMA was 7.3 per cent at the end of the first quarter this year compared to 9.1 per cent a year earlier. Some of the decline in the unemployment rate was due to job creation, but a lot of it was due to a shrinking labour force. Job growth was in parttime employment, while full-time employment declined. More youth and older workers were employed. However, much of the increased employment was part-time jobs.

Resale Market

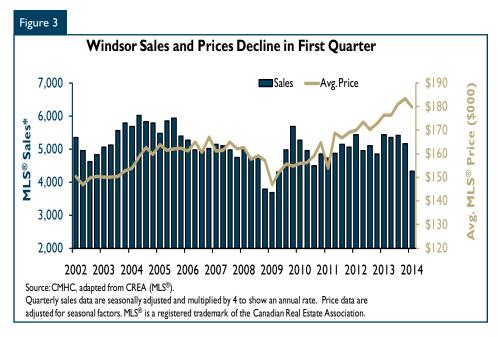

Residential sales through the Windsor-Essex Association of Realtors® on a seasonally adjusted basis were lower in the first quarter of 2014 compared to the fourth quarter of 2013. Actual first quarter sales figures decreased from the same quarter last year. Sales were down close to 20 per cent due to an unusually cold and long winter. The harsh winter weather was not conducive to homebuyers getting out to open houses. In addition, listings continued to trend down. With fewer listings there was less choice for homebuyers. Many households made their home purchases last year and fewer households were ready to buy early this year.

The resale market remained balanced. While new listings were lower in the first quarter of 2014 compared to the same quarter of 2013, sales declined more than listings. Rising prices through the fourth quarter of 2013

did not translate into increased listings as the harsh winter weather impacted households listing their home for sale. The sales-to-new listings ratio (SNLR) moved slightly lower in the first quarter.

Seasonally adjusted resale home prices trended lower in the first quarter. However, the longer-term trend shows that prices have been increasing since the first quarter of 2009. With a balanced market and little upward price pressure, the average price of a resale home increased by 1.2 per cent to \$174,399 in the first quarter of 2014 compared to the same quarter last year. Windsor has the most affordable prices for resale homes among Ontario CMAs. Close to 80 per cent of all homes sold in the first quarter of 2014 in Windsor-Essex were priced under \$220,000.

Migration Important to Housing Demand

Population growth is a driver of housing demand. Recent data from Statistics Canada showed that population growth has resumed in the Windsor Census Metropolitan Area (CMA) after several years of negative growth. However, the population remains below the level recorded at its

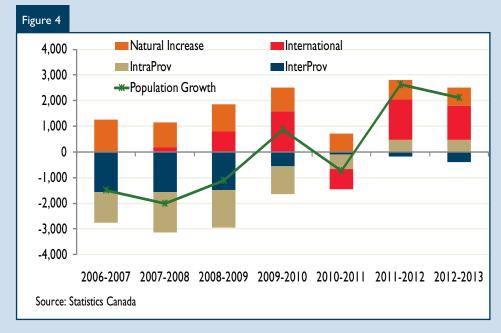

peak in 2006.

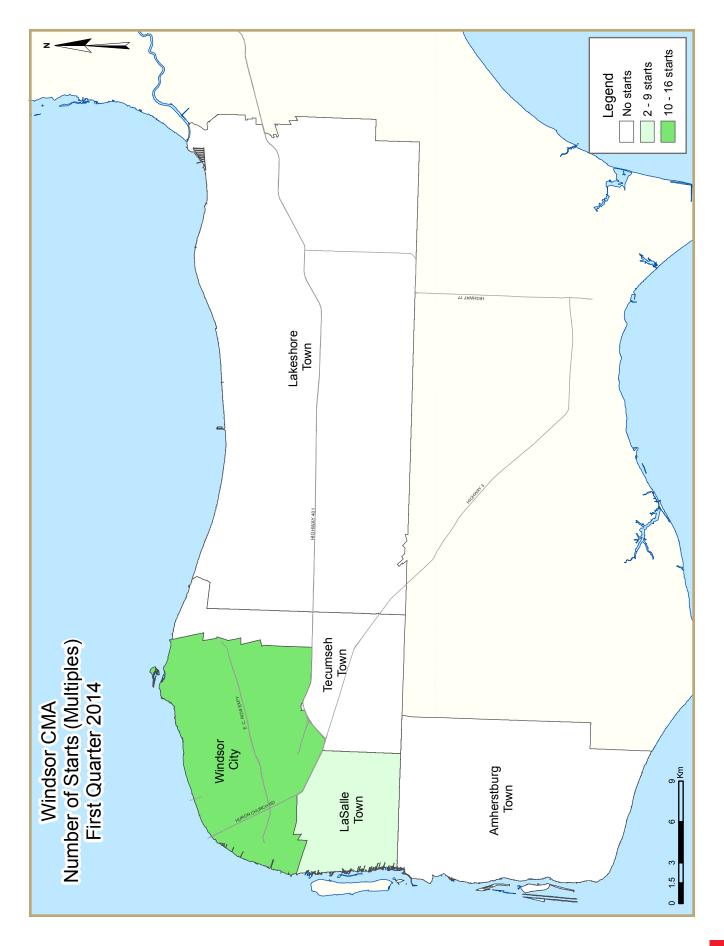

Although natural increase in the Windsor CMA is positive, the driver of population growth is migration, especially international migration. While inter-provincial migration remains negative, intraprovincial migration has added to population growth in the last two years.

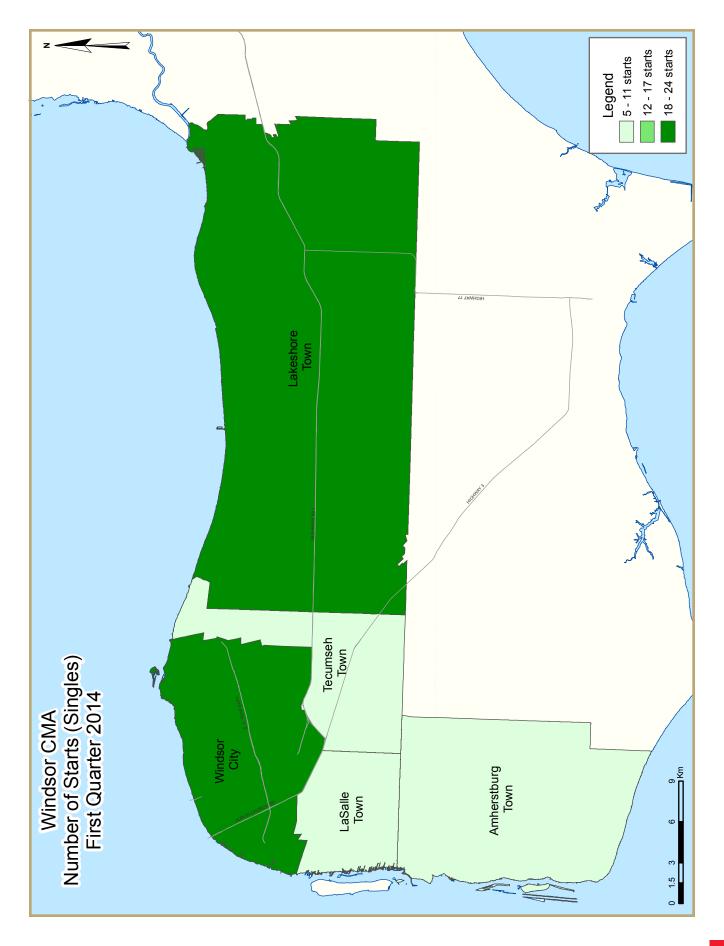

Total net migration supports population growth, however, the movement of migrants, in or out of the CMA, is important to housing transactions. With more than 20,000 persons moving in or

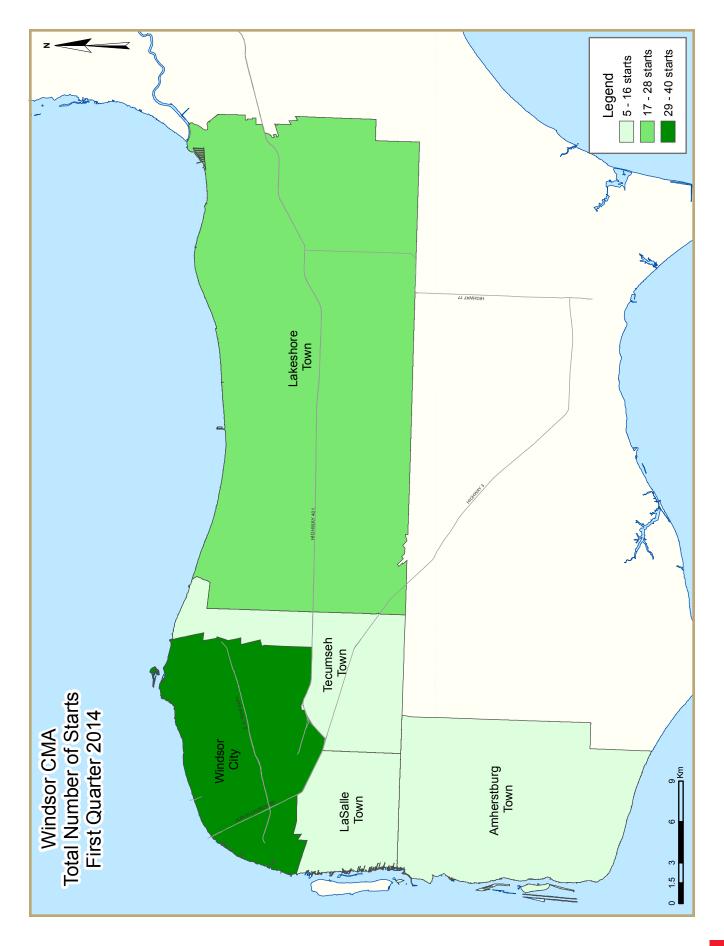

out of the CMA each year, this translates into thousands of transactions in the resale, rental and new home markets.

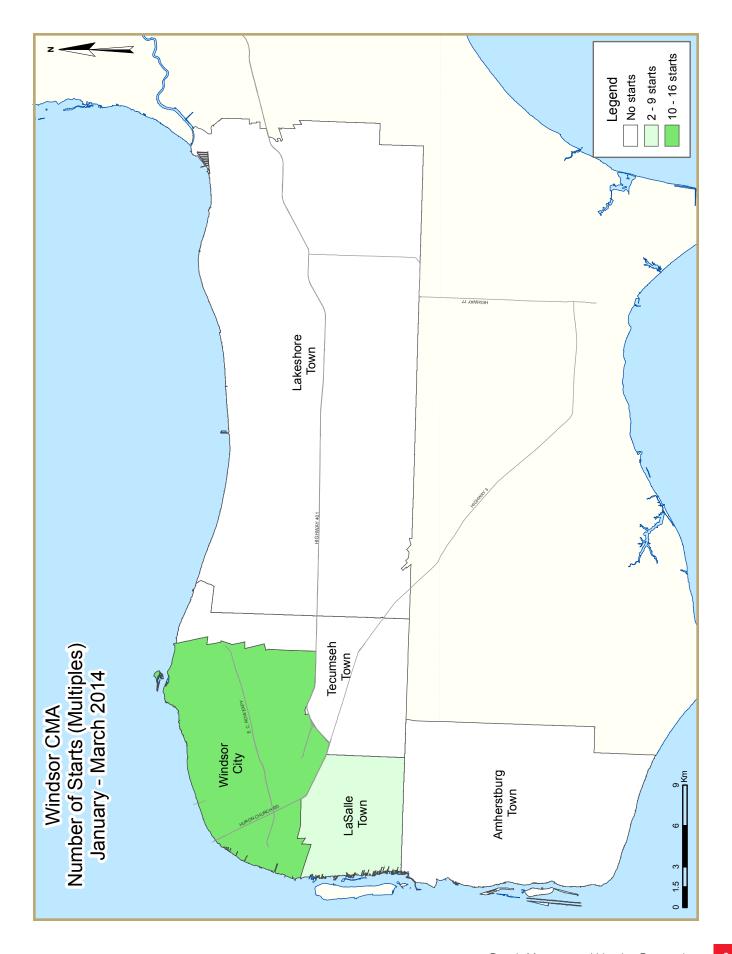

The accompanying chart shows the components of population growth.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
