

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: February 2014

Highlights

- Actual housing starts rise in January
- Single-family supply continues to rise
- The number of apartments in ownership inventory declines

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 12,949 units in January compared to 13,043 in December. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA increased 25 per cent from 619 in January 2013 to 776 in January 2014. Both the number of single-detached starts and multi-family starts increased on a year-over-year basis. Foundations were poured on 388 single-family homes in January, up from 304 a year prior. There were also 388 multi-family housing starts in January, a 23 per cent increase from the 315 units started in the same period of 2013.

The number of single-detached housing starts in the Edmonton CMA increased 28 per cent in January. Within the City of Edmonton, 290 single-family homes were started, up from 218 one-year prior. Strong employment growth of 3.6 per cent in 2013, coupled with elevated migration, will continue to drive demand for single-family homes in Edmonton in 2014. As well, the selection of homes for sale in the competing resale market has fallen in the past year leading more prospective home buyers to look to the new home market.

There were 3,990 single-detached homes under construction in January, a 10 per cent increase over the same period of 2013. The number

Figure 2

Source: CMHC

of complete and unabsorbed single-detached homes in ownership inventory declined six per cent year-over-year in January to 579 units, down from 619 a year earlier. A total of 363 single-detached homes were completed in January, down 13 per cent from the same month of 2013. At the same time, absorptions of single-family homes remained relatively stable, at 403, down slightly from 408 a year earlier. The supply of single-family homes continued to move higher on a year-over-year basis in January. Total supply, which includes homes under construction plus those in inventory, stood at 4,569 in January, up seven per cent year-over-year. With gains in single-detached starts in the last two years, new supply has been increasing in the Edmonton CMA since early 2012.

The averaged absorbed price for a new single-detached home increased 10.5 per cent in January to \$562,354,

up from \$508,847 in January 2013. The increase was, in part, due to a higher proportion of higher priced homes being absorbed. Homes priced above \$450,000 accounted for 64 per cent of single-family homes absorbed in January, compared to 50 per cent one year prior.

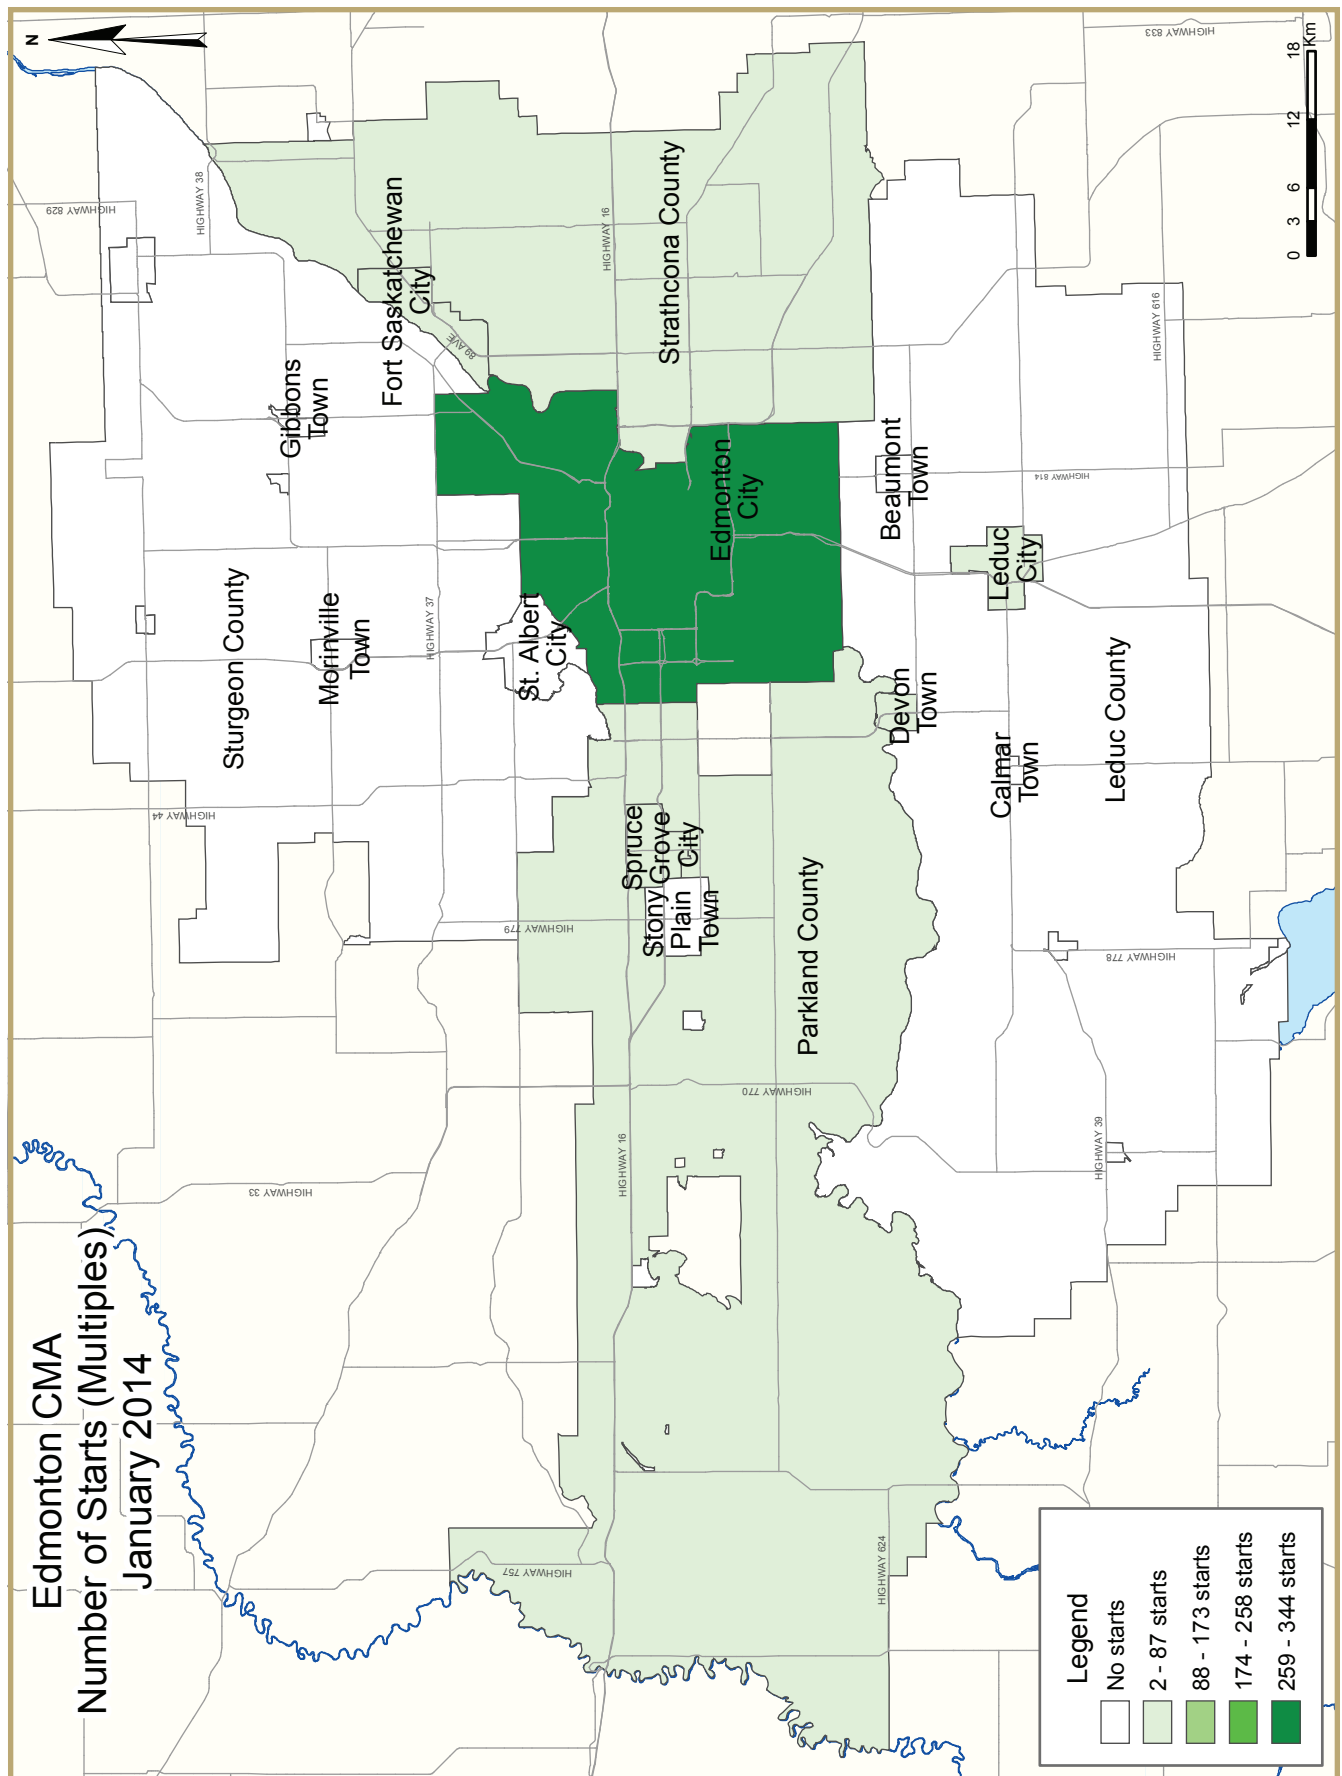

Multi-family housing starts in the Edmonton CMA, which include semi-detached, row, and apartment units, totalled 388 units in January, a 23 per cent increase from a year earlier. While both apartment and semi-detached starts rose on a year-over-year basis, the number of row starts declined. There were 25 row units started in January, down from 53 twelve months prior. A low vacancy rate in the Edmonton CMA has helped support construction in the multi-family sector. In January, 126 rental apartments were started, up from 78 in the corresponding month of 2013.

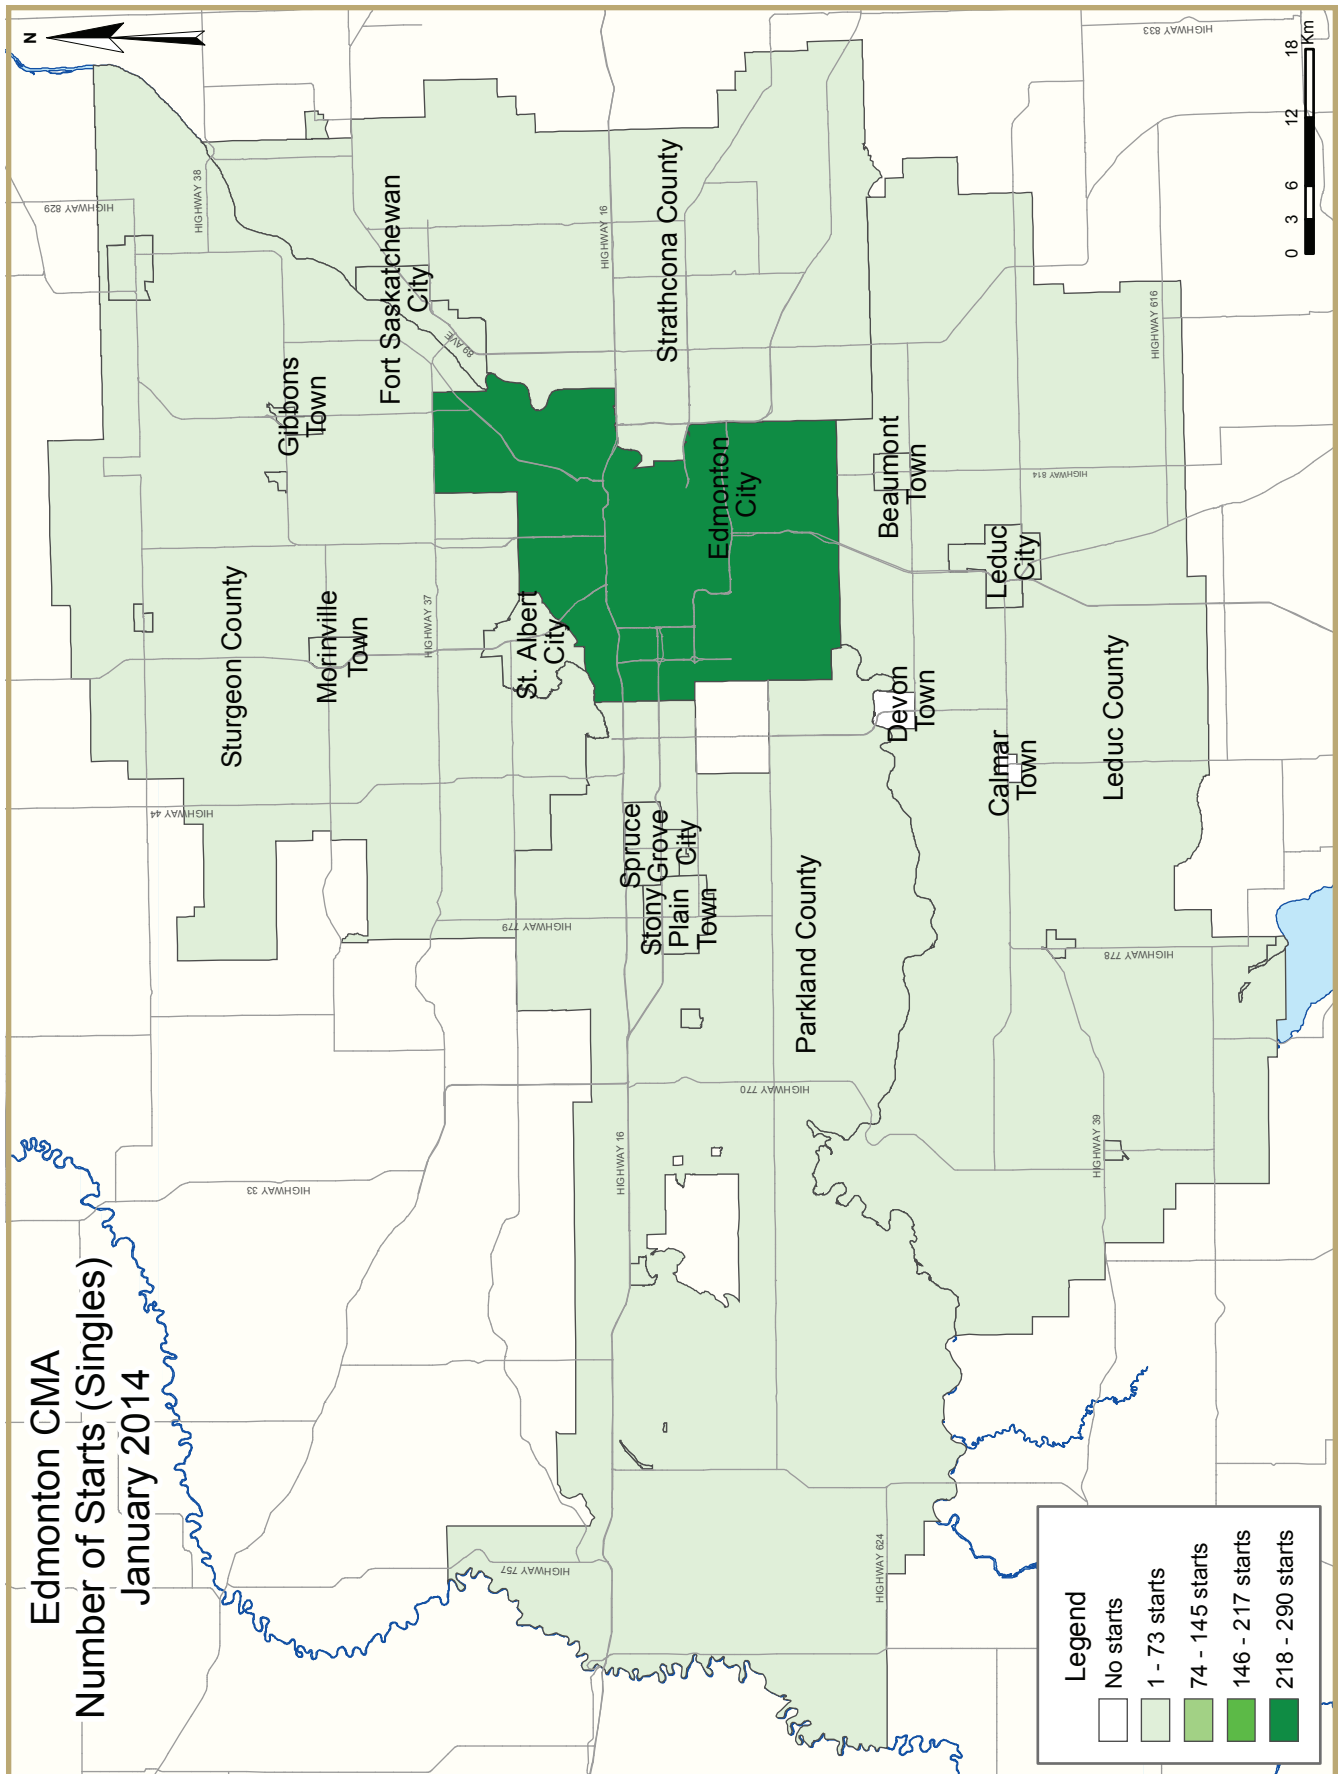

Absorptions of multi-family units into the ownership market totalled 494 in January, up from 387 12 months prior. Ownership inventory of multi-family units continued to decline on a year-over-year basis. There were 672 units in inventory, a 23 per cent decline from a year prior. Much of the decline was attributable to lower apartment inventory, which at 284 units was down 41 per cent from January 2013. The number of multi-family units under construction increased 19 per cent year-over-year in January to 9,379 units, up from 7,862 one year prior.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
