

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: May 2014

Highlights

- Actual housing starts decline in April
- Single-detached price growth slows
- Multi-family housing starts move lower

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 12,631 units in April compared to 12,772 in March. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA totalled 1,255 units in April, a 17 per cent decline from the 1,503 units started one year prior. Both single-detached and multi-family housing starts moved lower on a year-over-year basis. On a year-to-date basis, housing starts for the Edmonton CMA were down 18 per cent in April compared to the same four months of 2013. The decline was attributed to lower multi-family production, as single-detached starts to the end of April have increased over the previous year.

Following three consecutive months of increase, the number of single-detached starts in the Edmonton CMA moderated three per cent in April to 544 units. Within the City of Edmonton, foundations were poured on 375 single-detached homes, a 9 per cent decline from one year prior. After four months of 2014, single-detached starts for the Edmonton CMA totalled 1,853 units, up 10 per cent from the corresponding period of 2013. Growth in this segment is being supported by an expanding economy which has led to employment gains and wage growth. As well, the supply of homes in the resale market has been relatively low in the early months of 2014 which has led to additional demand for new homes.

Figure 2

Source: CMHC

With single-detached starts up from the previous year, the number of single-detached homes under construction continued to move higher on a year-over-year basis. There were 3,959 single-detached homes under construction in April, a six per cent increase over the same month of 2013. Following two months of double-digit increases, completions of single-detached homes declined seven per cent in April compared to the same period of 2013. Absorptions surpassed completions in April, reducing the number of complete and unabsorbed units. There were 634 single-detached homes in ownership inventory in April, down six per cent year-over-year. The decline was due to a lower number of spec built homes in inventory which more than offset a slight increase in the number of show homes.

After three months of double-digit per cent gains, price growth for new single-detached homes slowed in April.

The average absorbed price for a new single-detached home rose six per cent year-over-year to \$553,743. The increase can be partly attributed to a greater proportion of higher priced homes being sold. Homes priced above \$550,000 accounted for 32 per cent of absorptions in April, up from 22 per cent in the same month a year prior.

Multi-family housing starts in the Edmonton CMA, which include semi-detached, row, and apartment units, totalled 711 units in April, a 25 per cent decline from the same period of 2013. The decline was attributable to lower apartment starts, which were down 56 per cent year-over-year. On a year-to-date basis, multi-family starts declined 36 per cent compared to the first four months of 2013.

A key factor contributing to lower starts in the multi-family sector in 2014 is the number of units under construction. As of April, there were 9,338 multi-family units under

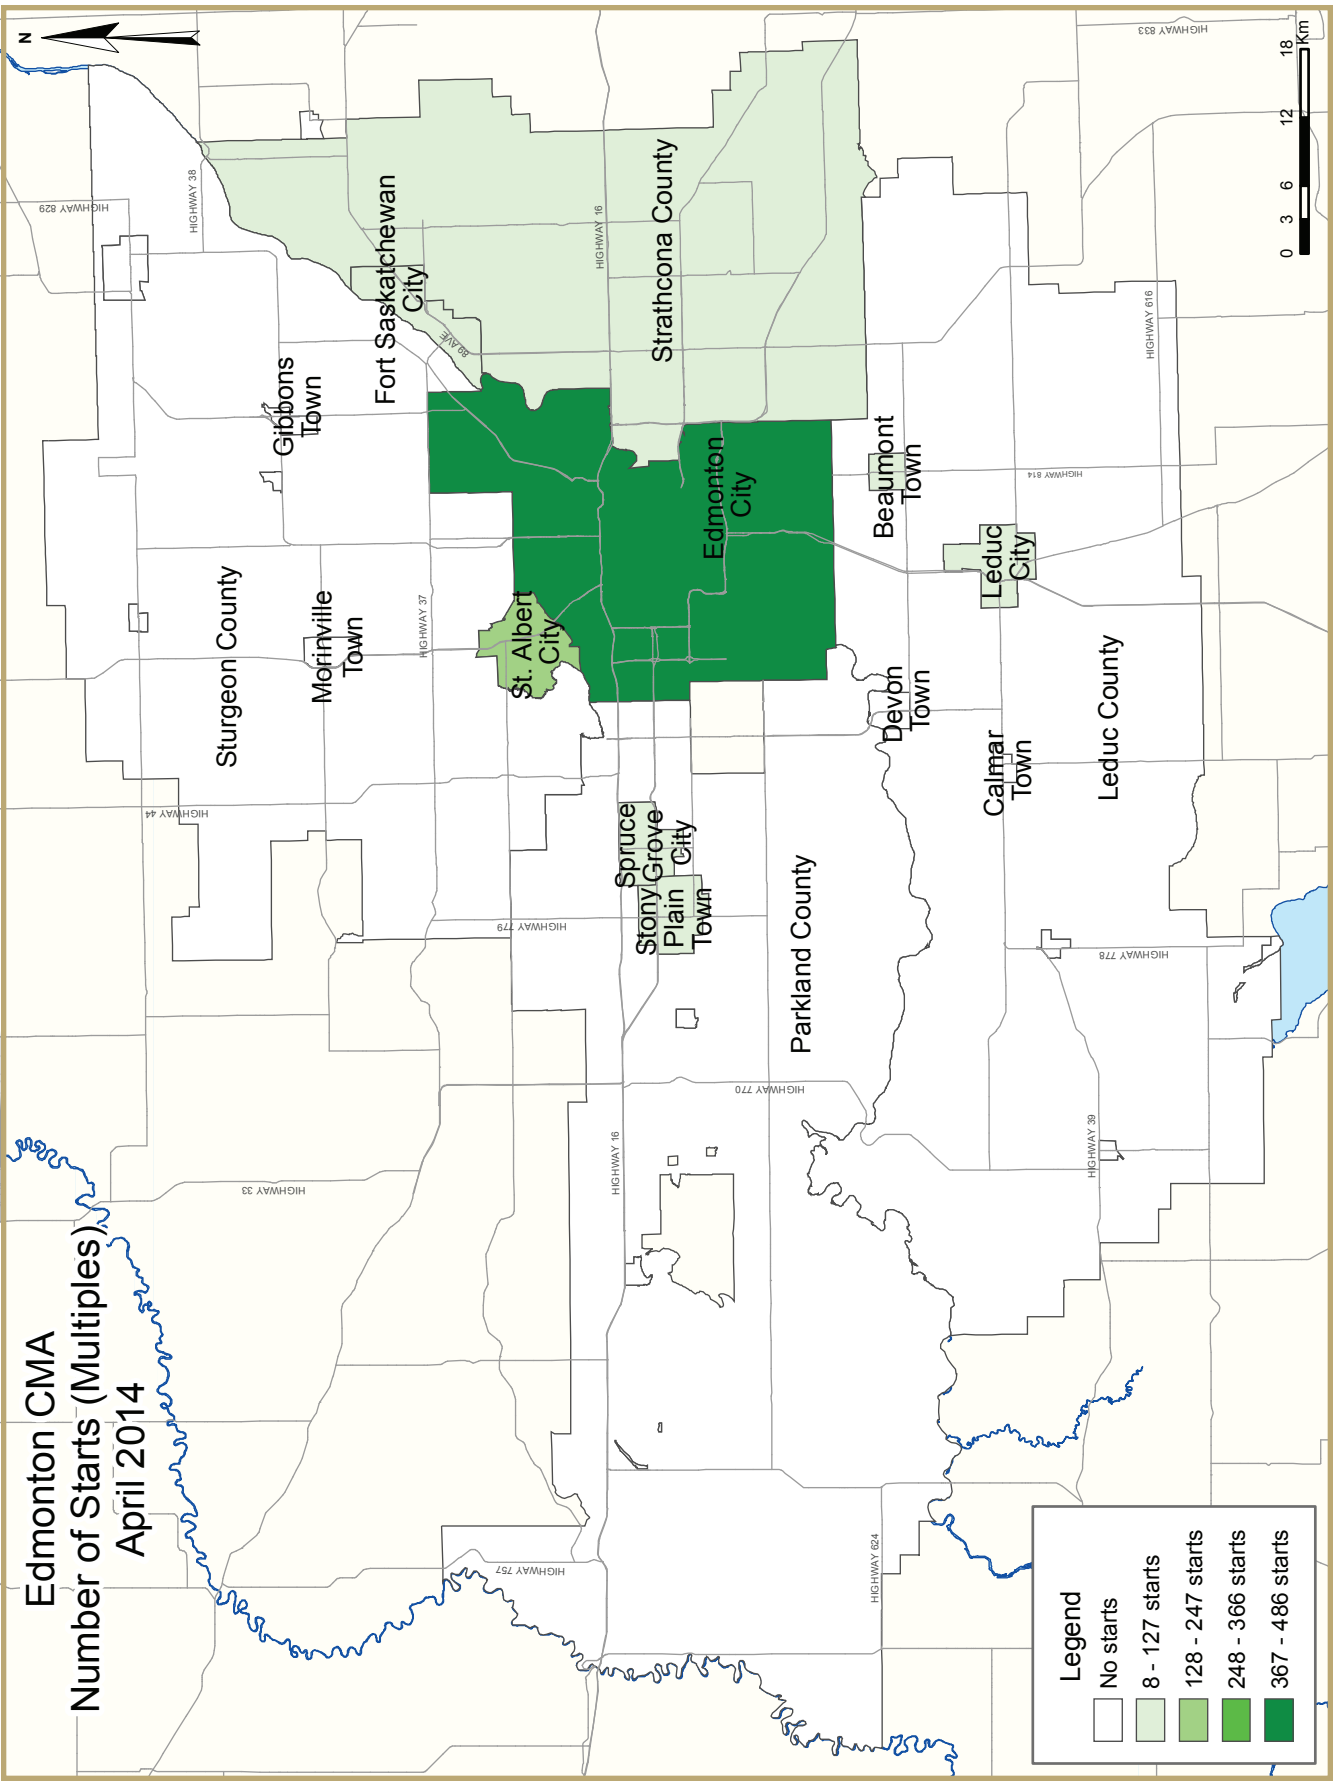

construction, 10 per cent higher than one year prior. As these units move to completion there is a risk that inventory may rise which is leading to the pull-back in multi-family housing starts.

Completions of multi-family units increased 20 per cent in April to 683. The increase was mostly due to apartment completions, which increased from 307 in April 2013 to 449 a year later. Almost one-third of apartment completions in April were of rental tenure. Absorptions of multi-family units in the ownership market were down five per cent year-over-year in April. Despite this decline, the number of multi-family units in ownership inventory was 23 per cent lower over the same comparison.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
