

HOUSING NOW

Edmonton CMA

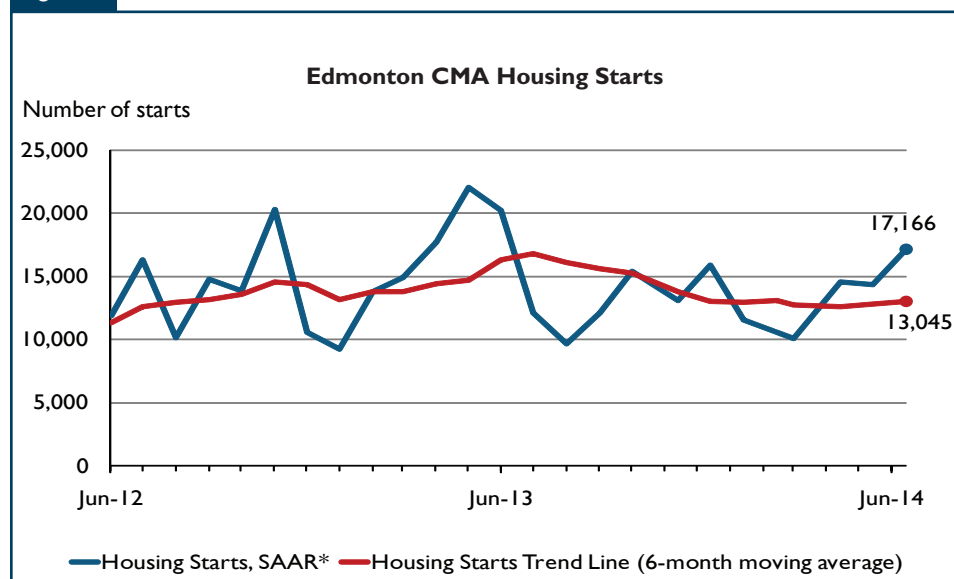

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: July 2014

Highlights

- Actual housing starts decline in June
- MLS® sales on the rise
- Strong employment growth continues

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

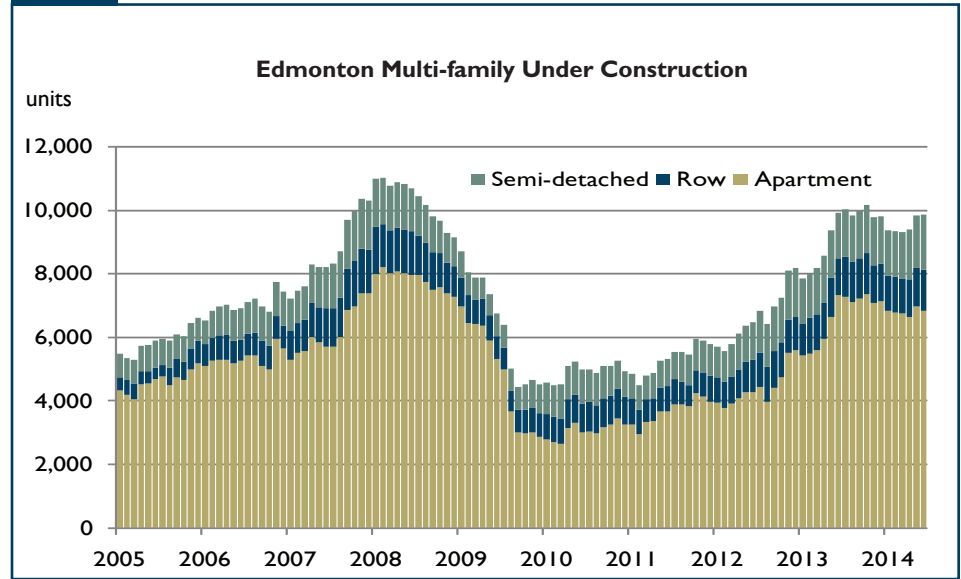

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 13,045 units in June compared to 12,831 in May. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts for the Edmonton CMA totalled 1,504 units in June, down from 1,750 in the same month of 2013. The decline was mostly attributable to lower multi-family housing starts which were down 20 per cent year-over-year, although single-detached starts also moved lower. After the first six months of 2014, total housing starts were down 21 per cent to 6,290 units from the 7,966 starts recorded in the first half of 2013.

Single-detached housing starts in the Edmonton CMA slipped two per cent in June as 580 homes broke ground, down from 589 in June 2013. Within the City of Edmonton, 383 single-detached homes were started, a two per cent decline from one year prior. After the first half of 2014, single-detached housing starts were up five per cent year-over-year in the Edmonton CMA to 2,937. Edmonton's strong economy has led to employment gains, wage growth, and elevated migration. This, coupled with low mortgage rates and relatively low inventory in the competing resale market, has led to increased demand for single-detached homes in Edmonton.

Completions of single-detached homes increased 16 per cent year-over-year in June to reach 517 units. Absorptions, at 565 units, were also higher than in the same month of June 2013. On a year-to-date basis, absorptions of new single-detached

Figure 2

Source: CMHC

homes were 10 per cent higher than the corresponding period of 2013, indicative of stronger demand for single-detached homes. With absorptions surpassing completions, new inventory of single-detached homes moved lower in June. At 557, new single-detached inventory was down from the 575 in June 2013, and at one of its lowest level since mid-2012. Both the number of show homes and spec built homes declined on a year-over-year basis.

The average absorbed price of a single-detached home was relatively unchanged from a year prior in June, at \$526,646. In contrast, the median absorbed price increased seven per cent year-over-year to \$492,250. On a year-to-date basis, the absorbed price of a single-detached home increased 7.3 per cent from \$514,675 in the first six months of 2013 to \$552,631 in the same period of 2014. The increase in price thus far in 2014 can be partly attributed to a larger number of absorptions of homes higher priced homes. Homes priced above \$550,000 accounted for 31.4

per cent of absorptions in the first half of 2014, up from 22.9 per cent in the same period a year prior.

Multi-family starts, which consist of semi-detached, row, and apartment units, declined to 924 units in June from 1,161 in the same month of 2013. The decline was attributable to fewer apartment starts as both row and semi-detached starts increased. Although demand for new multi-family housing remains supported by job growth, elevated migration, and a relatively low vacancy rate in the rental market, starts have moved down from the near record level reached in 2013 due to heightened supply levels. Through the first six months of 2014, multi-family starts were down 35 per cent from the corresponding period of 2013. Both row and apartment starts were lower in the first half of 2014, while semi-detached starts increased.

For the first time in over three years, the number of multi-family units under construction declined on a year-over-year basis in June. There were 9,869 multi-family units under

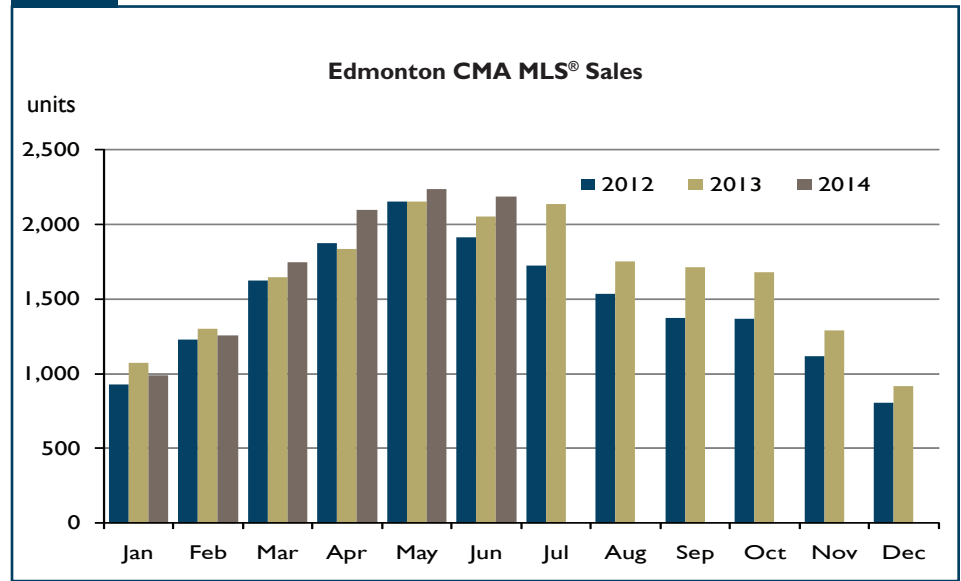

construction, down from 9,913 in the same month of 2013. Despite the decline, the number of units under construction was still well above the five-year average of 6,680. Completions of multi-family homes reached 883 units in June, up from 603 in the corresponding month of 2013. Apartment completions drove the increase and at 625 units, reached their highest level since mid-2009. The majority of apartment completions in June were of rental tenure.

Ownership inventory of multi-family units continued to move lower on a year-over-year basis in June. There were 572 multi-family units in ownership inventory, down 20 per cent from the 719 units in inventory 12 months prior. Inventory has been lower on a year-over-year basis every month since September of 2012. As the relatively high number of units currently under construction move to completion over the next several months, inventory should begin to trend higher.

Existing Home Market

Residential MLS® sales in Edmonton picked up in the second quarter of 2014. There were 6,521 sales from April to June, an eight per cent increase over the same period of 2013. On a year-to-date basis, sales were up four per cent over the first six months of 2013. Strong employment growth, elevated migration, and low mortgage rates continued to support demand for housing.

Figure 3

Source: CREA

Sales growth was also supported by an increase in the number of MLS® new listings in the second quarter, as active listings in the Edmonton market had been relatively low over the past year. There were 10,689 new listings posted from April to June of 2014, a six per cent increase over the same three months of 2013. Price growth in the resale market has moved higher in recent months and has contributed to the increase in new listings as owners attempt to capitalize on equity gains.

Although new listings increased in the second quarter, active listings remained lower on a year-over-year basis as demand for resale homes outpaced supply. Active listings averaged 5,416 from April to June, seven per cent lower than the average in the second quarter of 2013.

With demand for resale homes rising faster than supply, prices continued to move higher in Edmonton's resale market. The average MLS® residential price was \$366,205 in the second quarter of 2014, a 4.3 per cent increase over \$351,179 in the corresponding quarter of 2013. On a year-to-date basis, the average resale price rose 4.5 per cent in first six months of 2014 compared to the first half of 2013.

Economy at a Glance

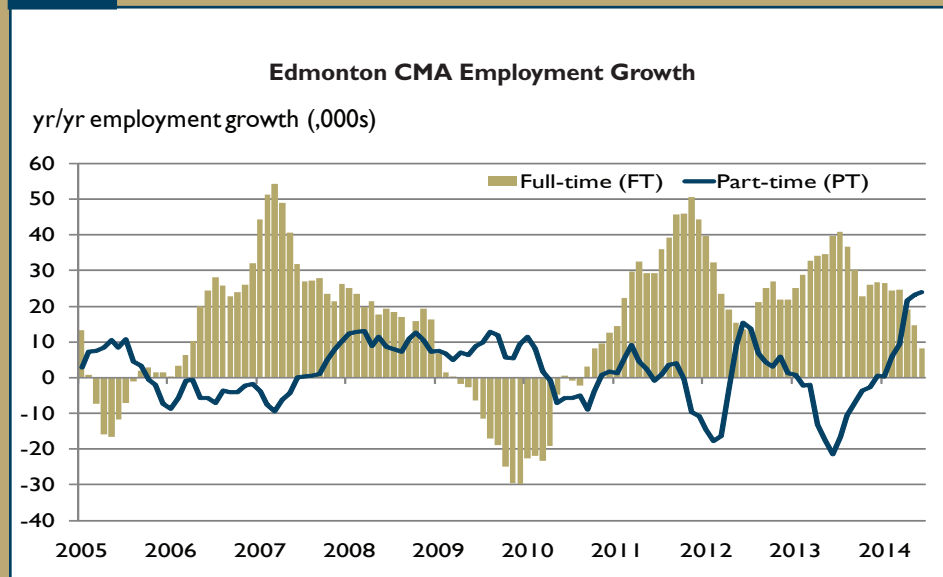

Employment growth remained strong in the second quarter of 2014. Employment averaged 745,200 from April to June, a 4.5 per cent increase over the same quarter of 2013. Most of the jobs created during this period were part-time positions, which accounted for 24,000 new positions. In contrast, only 8,200 full-time jobs were created.

Despite strong employment growth, the unemployment rate in the Edmonton CMA averaged 5.5 per cent in the second quarter of 2014, up from 4.6 per cent one year prior. An increase in the number of people in the labour force led to the uptick in the unemployment rate. Elevated migration in the past year has been a key factor in the increase in the labour force.

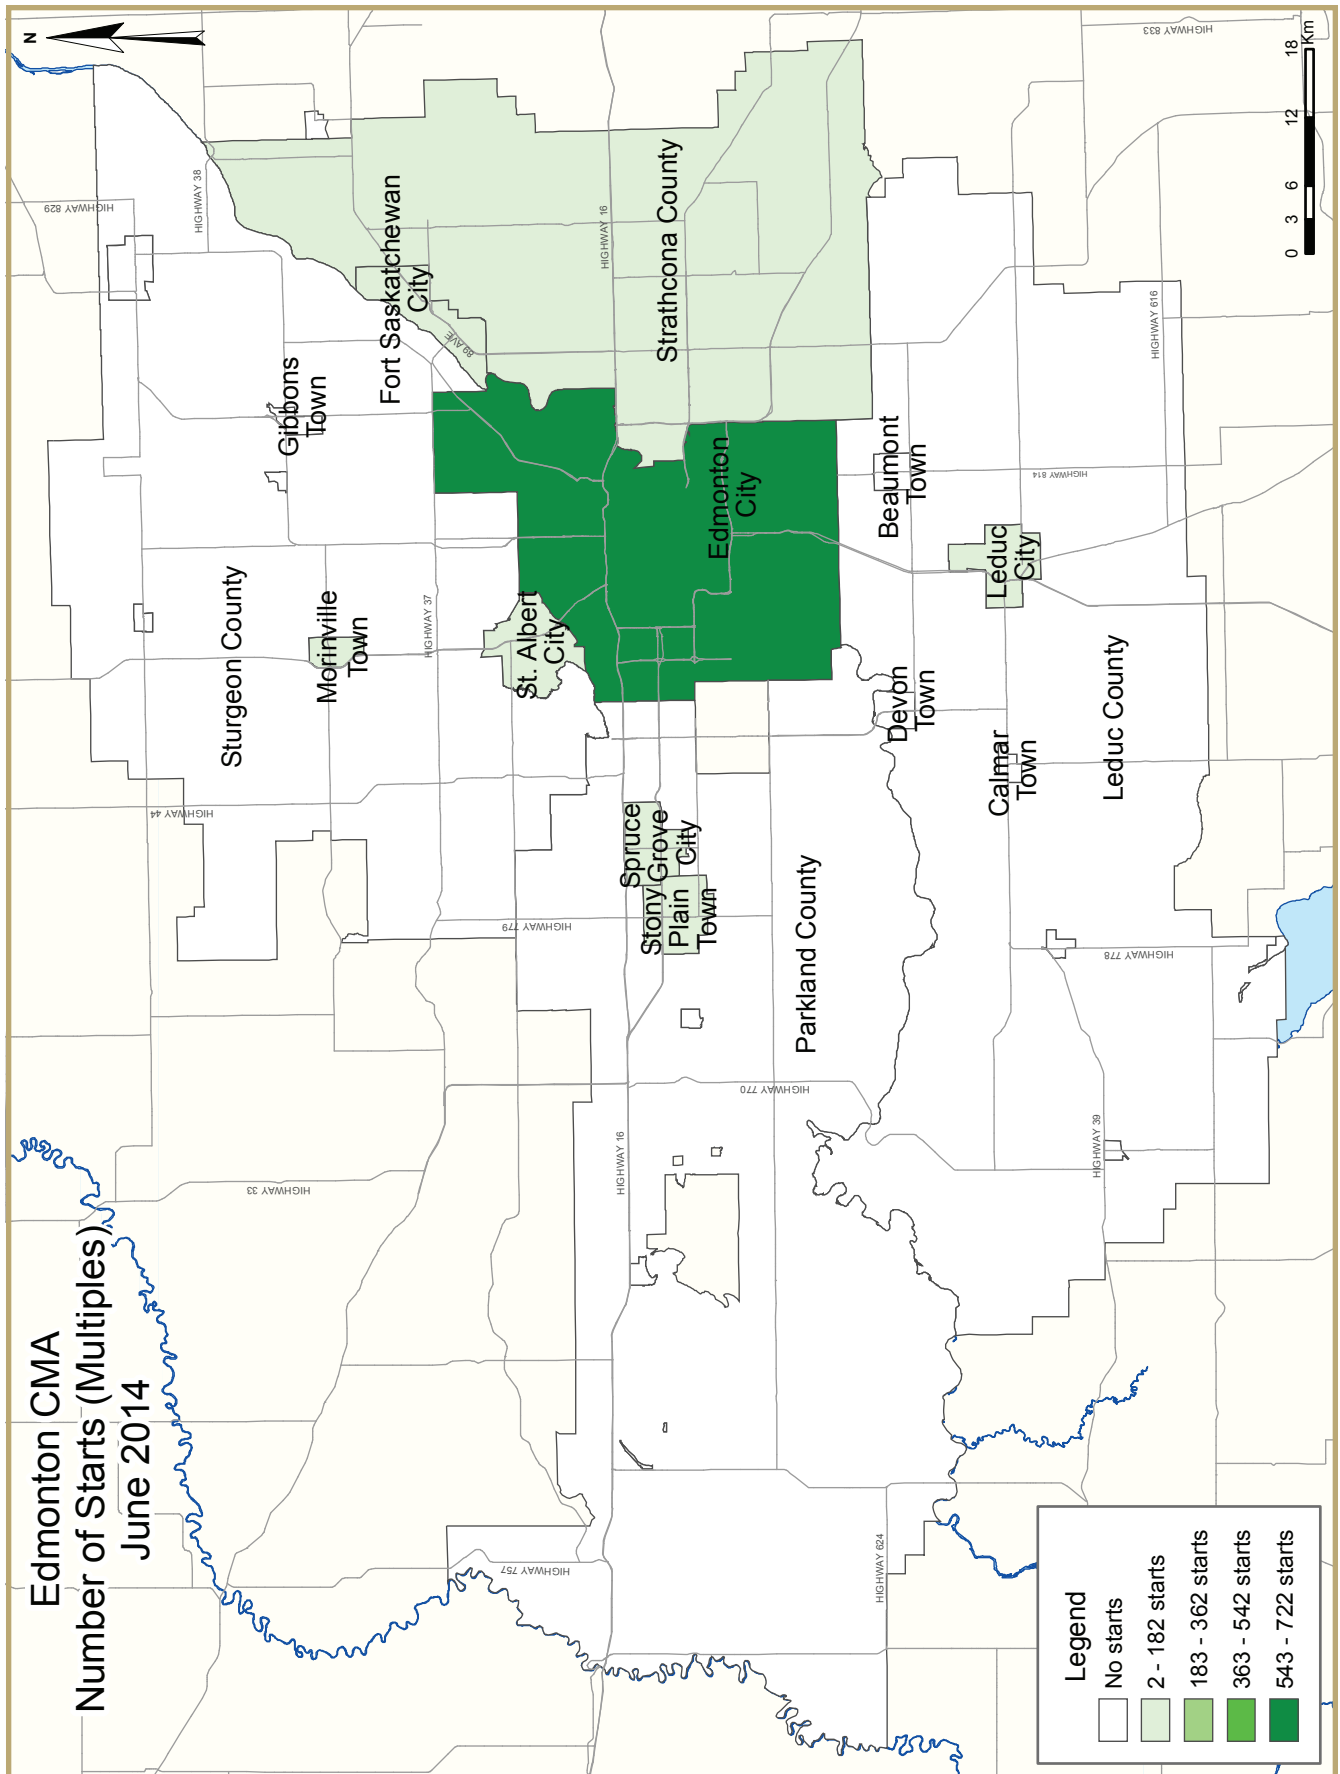

Average weekly earnings continued to move higher in the second quarter of 2014, albeit at a slower pace. Earnings averaged \$1,063 from April to June, 1.7 per cent higher than in the same three months of 2013. The slowdown in earnings growth can be partly attributed to the relatively higher number of part-time positions in the Edmonton CMA.

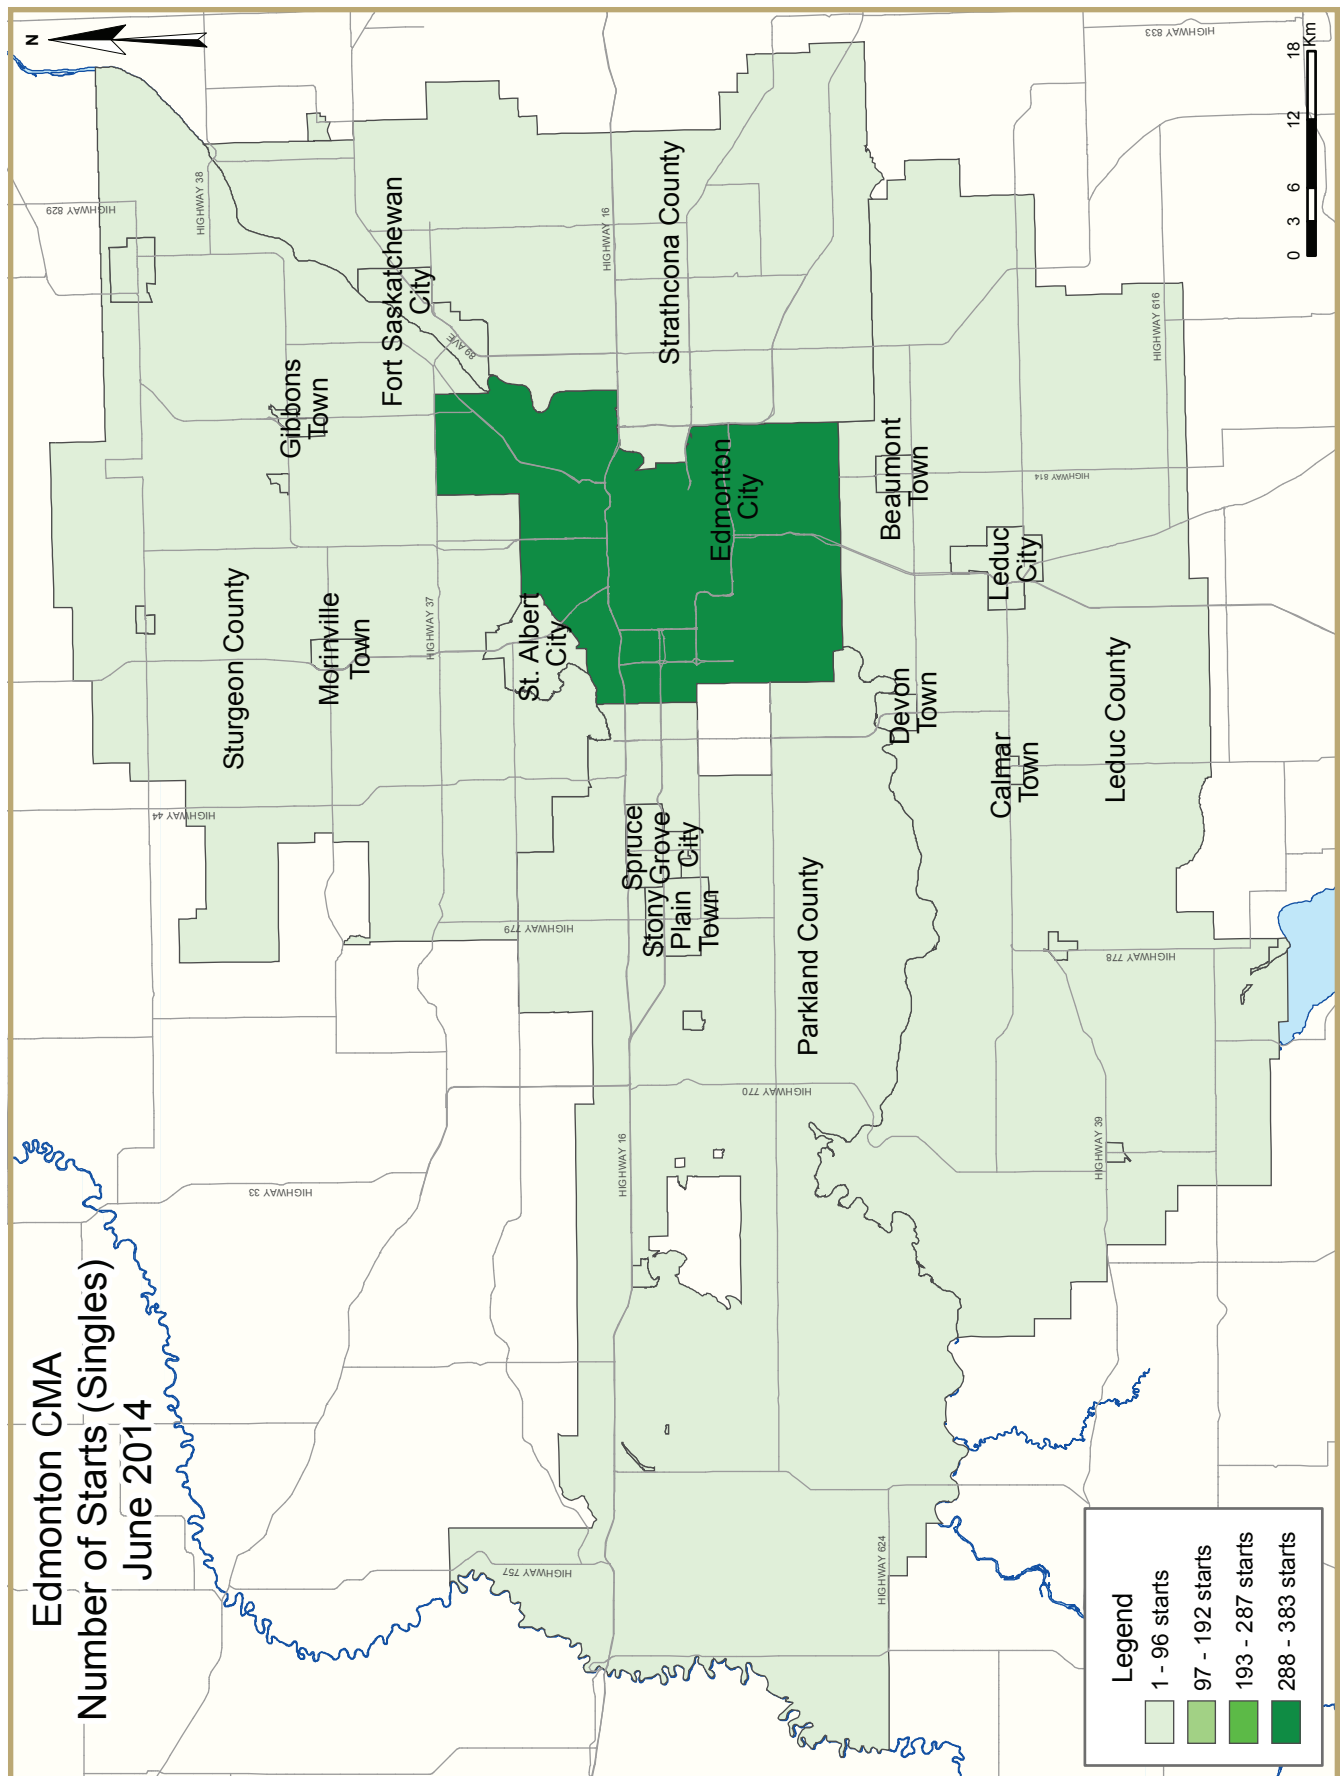

After reaching elevated levels in 2013, net migration to Alberta moderated in the first quarter of 2014. Net migration totalled 21,316 from January to March, down from 27,070 in the first three months of 2013. Lower interprovincial migration was the largest contributor to the decline, as it decreased 29 per cent year-over-year. Net international migration, including non-permanent residents, also moved lower, declining to 11,735 people from 13,632. Although migration moved lower on a year-over-year basis, it is still relatively high and will continue to support demand for housing.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
