

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: October 2014

Highlights

- Actual housing starts increase in September
- Balanced conditions in the resale market support price growth
- Employment growth eases in the third quarter

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 14,650 units in September compared to 13,850 in August. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts for the Edmonton CMA totalled 1,300 units in September, a 21 per cent increase over the same month of 2013. Both single-detached and multi-family housing starts were up on a year-over-year basis. On a year-to-date basis, total housing starts were down nine per cent to 10,038 from 11,020 in the first three quarters of 2013.

Single-detached housing starts in the Edmonton CMA rose 19 per cent in September as 616 single-detached homes were started, up from 518 in the same month one year prior. This marks the third consecutive month of double-digit year-over-year increases. A strong third quarter brought year-to-date single-detached starts to 4,924 units, a 10 per cent increase from the same period of 2013. Low mortgage rates, employment growth, and rising wages are supporting demand in this segment of Edmonton's new home market.

Completions of single-detached homes were relatively stable in September at 423 units compared to 420 one year prior. Absorptions, on the other hand, were down six per cent over the same comparison yet surpassed completions during the month. As a result, the number of completed and unabsorbed homes in inventory also decreased on a year-over-year basis. There were 526 new single-detached homes in inventory

Figure 2

Source: CMHC

in September, four per cent fewer than the 548 homes in inventory in September 2013.

The average absorbed price declined 5.4 per cent in September to \$552,245 from \$583,600 in the same month of 2013. This is the second consecutive month of decline. Despite this, the absorbed price for a new single-detached home averaged \$552,115 through the first nine months of 2014, up 4.1 per cent from the same period of 2013. The increase has been partly attributable to a shift to more expensive homes, as homes priced above \$550,000 accounted for 32 per cent of absorptions in the first nine months of 2014, up from 25 per cent in the same period of 2013.

Multi-family starts, which consist of semi-detached, row, and apartment units, reached 684 units in September, 22 per cent higher than 559 starts recorded one year prior. Increases were noted across all unit types with row and semi-detached units posting the largest gains. After nine

months of 2014, multi-family starts were down 22 per cent from the first three quarters of 2013. The decline was mostly attributable to apartment starts which were down 42 per cent over the same period. Although employment gains, elevated migration, rising wages, and a relatively low rental vacancy rate are supporting demand for multi-family homes in Edmonton, a high number of units under construction has held back starts for much of 2014.

There were 10,139 multi-family units under construction in September, two per cent higher than in the corresponding month of 2013. This represents the second highest level of under construction since mid-2008. Completions of multi-family units were down seven per cent year-over-year in September as lower completions of apartments more than offset increases in row and semi-detached units. In line with the drop in completions, absorptions of multi-family units in the ownership market also moved lower. A total of

289 multi-family units were absorbed, down 32 per cent from one year prior. Although absorptions were down, ownership inventory of multi-family units continued to move lower. At 470 units, inventory was 21 per cent lower than a year prior and at its lowest level since mid-2008. Given the high number of units under construction, we expect upward pressure on inventory once these units reach completion.

Existing Home Market

Residential MLS® sales in Edmonton were relatively unchanged in the third quarter of 2014 compared to the corresponding quarter last year. From July to September, 5,595 sales were recorded compared to 5,601 in the same quarter of 2013. Despite little change in the third quarter, year-to-date sales increased three per cent from the first nine months of 2013. Growth has been supported by employment gains, low mortgage rates, elevated migration, and an increase in new listings.

The number of MLS® new listings increased to 8,240 in the third quarter, up three per cent from the same quarter of 2013. This brought the year-to-date total to 26,339, four per cent higher than the first nine months of 2013. Growth in new

Figure 3

Source: CREA, Trended by CMHC

listings has been supported by price growth in the resale market as some homeowners look to take advantage of equity gains.

Although new listings have moved higher, active listings on the resale market continued to decline in the third quarter. The number of active listings averaged 5,252 from July to September, down from 5,501 in the same quarter of 2013. With demand steady and supply moving lower, the average number of days on the market decreased in the third quarter to 48 days, down from 52 in the same quarter of 2013. With new listings

rising and sales flat, the sales-to-listings ratio moved down slightly in the third quarter. The ratio averaged 68 per cent from July to September, down slightly from 70 per cent in the same three months of 2013.

Balanced market conditions continued to support price growth in Edmonton's resale market. The average residential price reached \$362,937 in the third quarter, a 4.3 per cent increase over the same quarter one year prior. On a year-to-date basis, prices rose 4.5 per cent in the first nine months of 2014 to average \$362,129.

Economy at a Glance

Employment growth in the Edmonton CMA eased in the third quarter of 2014. After rising 4.5 per cent year-over-year in the second quarter, employment growth moved down to 2.0 per cent year-over-year in the third quarter. Job creation was concentrated in part-time positions, which accounted for 11,900 new positions. In contrast, the number of full-time positions increased by 2,900.

The unemployment rate averaged 5.7 per cent from July to September, up from 5.3 per cent in the same quarter of 2013. This represents the highest quarterly average for the unemployment rate in over two years. Elevated migration, which has led to an expanding labour force, and slower employment growth were contributing factors in the increase.

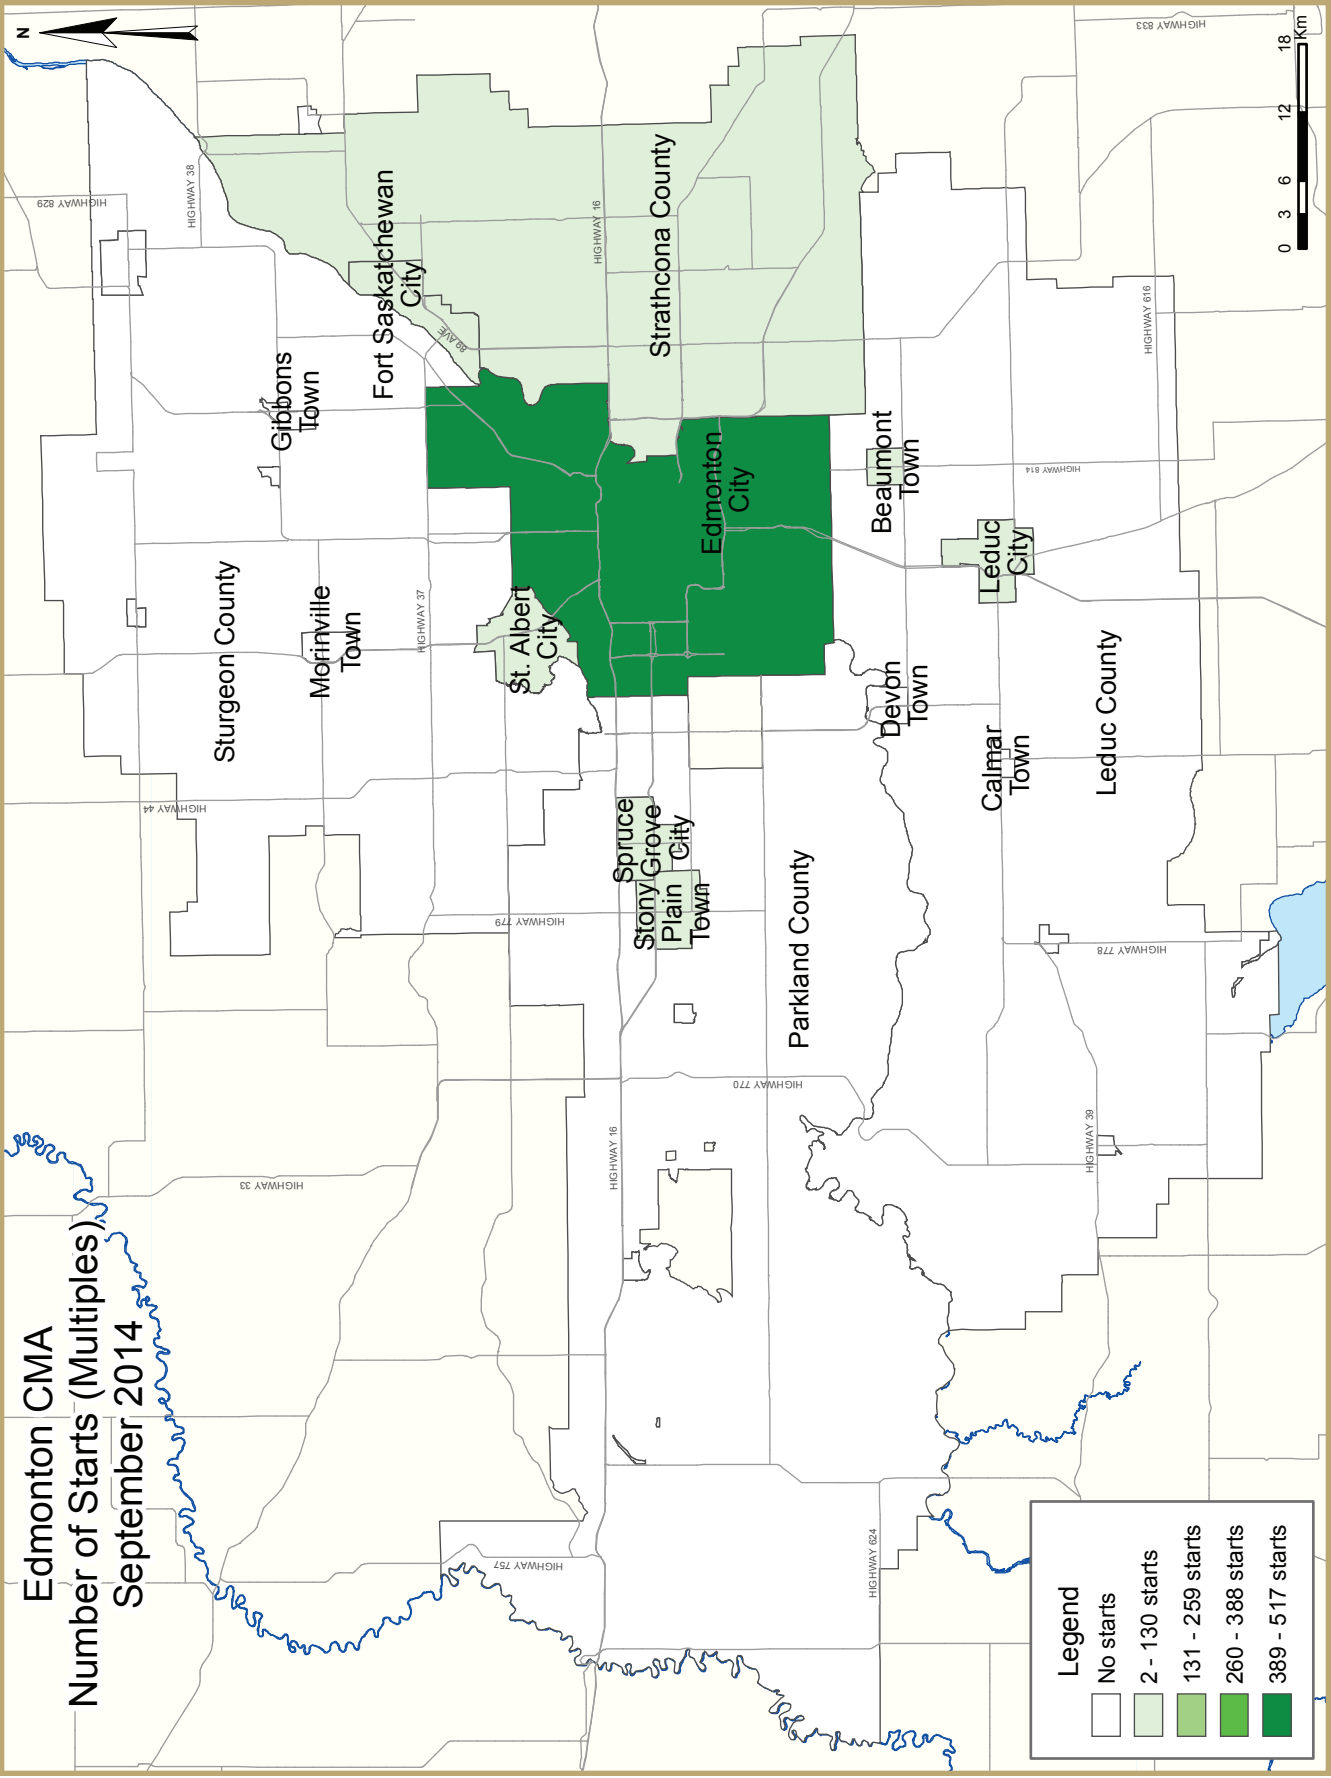

Although the unemployment rate moved higher in the third quarter, demand for labour has remained relatively strong and has led to continued growth in earnings. Average weekly earnings increased to \$1,069 in the third quarter, 3.1 per cent higher than one year prior.

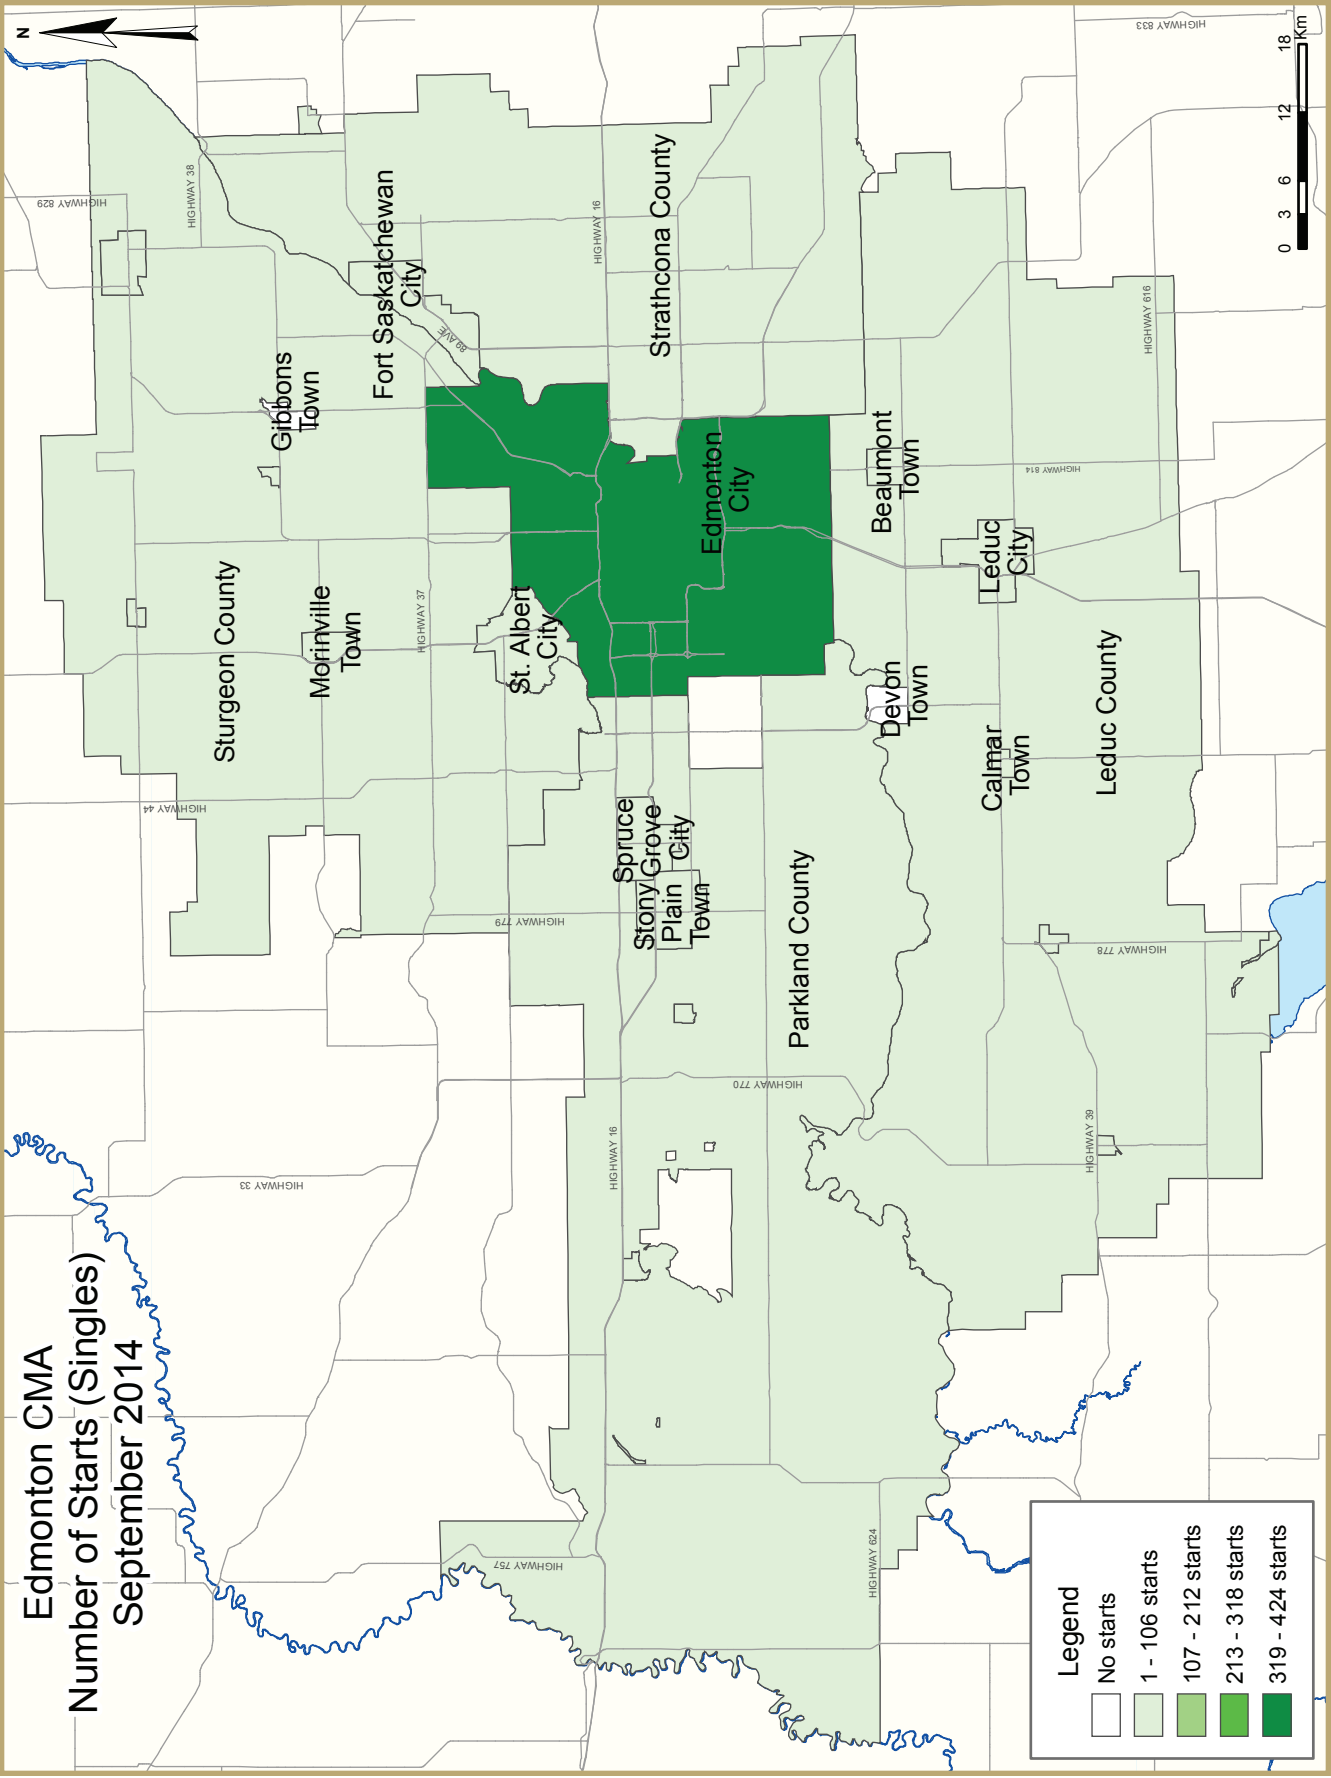

Net migration in the province continued to move down from its elevated level in the second quarter of 2014. Net migration totalled 25,757 from April to June, ten per cent lower than in the same quarter of 2013. The decline was attributable to a lower number of non-permanent residents moving into Alberta, as the number decreased from 8,330 in the second quarter of 2013 to 601 in the corresponding quarter of 2014. In contrast, both net international migration and interprovincial migration increased on a year-over-year basis.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
