HOUSING MARKET INFORMATION

HOUSING NOW Montréal CMA

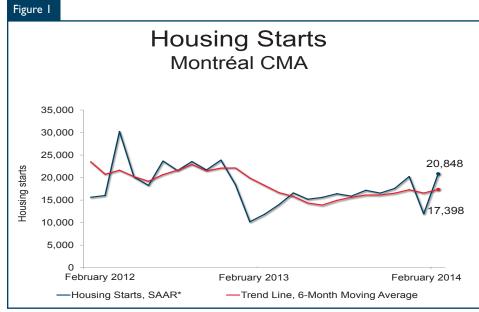

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: March 2014

Highlights

- The housing starts trend in the Montréal CMA was up slightly in February compared to the previous months.
- The pace of residential construction increased in all geographic sectors of the CMA in February.
- Housing starts fell in only one market segment: freehold housing.

All starts figures in this release, other than actual starts and the trend estimate, are seasonally adjusted annual rates (SAAR)—that is, monthly figures adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace were maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing market overview

Housing starts in the Montréal census metropolitan area (CMA) were trending at 17,398 units in February, compared to 16,573 in January, according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. The stand-alone monthly SAAR was up significantly, rising to 20,848 units in February from 11,960 in January. This gain was attributable to the increase in the pace of multi-unit housing construction.

More specifically, this considerable increase in housing starts in the Montréal CMA in February resulted from the start of construction on a few large residential projects, mostly located in downtown Montréal. But even with this one-time gain, the number of housing starts in 2014 should remain comparable to the level recorded in 2013. With demand having been less significant for several months now, builders adjust gradually to the market conditions by slowing down their rate of production.

According to the actual data, 1,614 dwellings got under way in the Montréal CMA in February 2014, or almost double the 870 units started during the same month in 2013. As mentioned earlier, this hike was largely

due to the start of construction on a few large housing projects, mainly intended for the condominium segment. Rental housing starts² also posted a strong increase, jumping from 32 units in February 2013 to 315 in February 2014. Only the freehold home segment registered a decrease in activity (-12 per cent).

Across the CMA, housing starts rose in all geographic sectors in February. The South Shore posted the greatest hike in starts, mainly on account of a strong increase in activity in the rental housing segment in February. As well, starts more than doubled year over year on the Island of Montréal and in Vaudreuil-Soulanges, while the gains were more modest in Laval (+4 per cent) and on the North Shore (+6 per cent).

For the first two months of 2014, total starts in the CMA were up by 59 per cent over the same period a year earlier. This gain was attributable to increases in the rental and condominium housing segments. Freehold home starts, for their part, were down (14 per cent).

Resale market

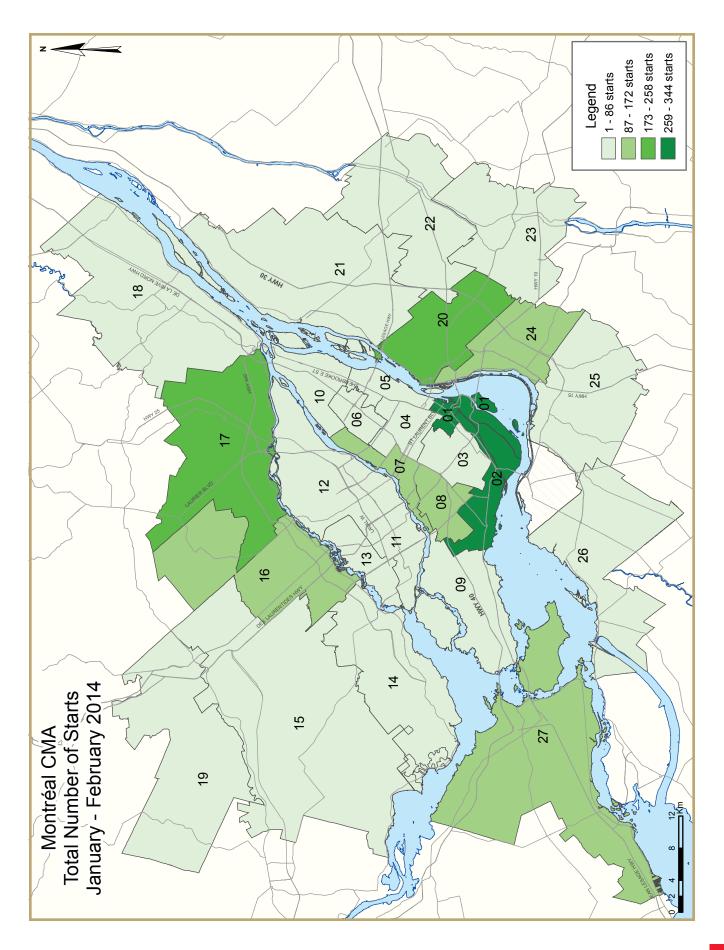

According to the latest Centris® statistics from the Quebec Federation of Real Estate Boards (QFREB), 3,311 Centris® sales were registered in the Montréal CMA in February 2014, for a decrease of 2 per cent from the same period a year earlier. This

drop was due to a marked decline in condominium sales (-11 per cent).

The number of existing homes for sale in the CMA continued to grow in February. In fact, overall active Centris® listings went up by 9 per cent, mainly on account of the increase recorded in the condominium segment (+13 per cent). Active Centris® listings rose more moderately for single-family houses (+8 per cent), while they remained relatively stable in the case of plexes (+1 per cent).

With this persistent increase in supply and small decrease in demand, the resale market continued to ease in February 2014, mainly on account of the conditions in the condominium segment.

 $^{^{2}\ \}mbox{ln}$ this report, the data presented on the rental segment exclude co-operative housing starts.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
