

# HOUSING NOW

## Quebec Region

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2014

### New home market in the fourth quarter of 2013

According to the results of the latest survey conducted by Canada Mortgage and Housing Corporation (CMHC), residential housing starts across Quebec (urban and rural) decreased by approximately 13 per cent in the fourth quarter of 2013.

A total of 10,661 dwellings were started between October and December 2013, compared to 12,201 a year earlier. However, the seasonally adjusted annual rate of the same period (38,903) is stronger than that recorded in the third quarter (36,627).

In the province's urban centers (centers with populations of 10,000 or more inhabitants) decreases in housing starts were observed in

the two main housing categories: the single-detached market segment, which decreased by 17 per cent and multi-family homes (semi-detached, row-houses and apartments), which decreased by approximately 9 per cent. However, the decline recorded on the multi side conceals a contrast with respect to apartments. In fact, there was a sharp drop in condominium starts (-34 per cent), while rental apartments grew by more than 60 per cent.

## 2013 yearly total

The fourth quarter result brings the yearly total of starts to 37,758 (compared to 47,367 for the year 2012). Thus, in 2013, residential construction Quebec will have declined by 20 per cent over the previous year.

In 2013, starts of single-detached and multi-family dwellings in urban centres each fell about 22 per cent over the previous year. However, as in the fourth quarter, the result for the multi-family segment requires qualification: starts of condominium apartments (-29 per cent) and rental apartments (+11 per cent) evolved in opposite directions.

Thus, after several years during which housing starts were close to the 50 000 unit level, the volume is now down to below the 40,000 mark. Low employment growth and the expansion of the resale market have reduced the demand for new single-detached homes, while the relatively high supply of new apartments slowed the pace in the multi-family starts.

According to the latest forecasts made by CMHC, housing starts in the province of Quebec will amount to 38,000 units in 2014 and 38,800 units in 2015. The moderate pace of

economic growth and employment will weigh on housing demand of new and resale homes, this year and next year. In addition, the number of starts will also be limited by relatively high inventories of new and existing houses.

## At the regional level

At the regional level, in the fourth quarter, a decrease of housing starts was observed in about half of Quebec's 46 urban centers. Several differences can thus be observed among these centres. As for rural areas, a significant decrease took place during this same period.

Four of the six census metropolitan areas (CMAs) showed significant declines in housing starts in the last quarter of 2013. In addition, the Gatineau CMA showed a slight decrease (3.2 per cent) while the Sherbrooke area posted a significant increase in the last quarter due to a hike in the apartment market segment.

For the entire year 2013, housing starts decreased in approximately 60 per cent of urban centers Quebec. With regard to centres of 50,000 inhabitants or more, nearly all of them recorded decreases, whereas for smaller urban centres, approximately a third posted a drop.

Housing starts in urban areas of medium size (population between 50,000 and 99,999 inhabitants) decreased by approximately 22 per cent in the fourth quarter of last year. This fall is due to a decrease in both the single-detached homes than in multi-family dwellings. Note that except for Shawinigan, all centres of this size showed a significant drop in activity in the fourth quarter (see Tables 2 and 2.1).

Contrary to the trend of larger urban centres, the total for all 34 smaller agglomerations (including between 10,000 and 49,999 inhabitants) is up by 19 per cent in the fourth quarter. This result is explained by increases in starts of new rental apartments. For the entire year 2013, the results are comparable to the previous year. However, the breakdown of the annual total shows a decrease on the single-detached and semi-detached side, while apartment starts were on the rise (see Table 2.1).

## Resale market

According to data from the Quebec Federation of Real Estate Boards (QFREB), approximately 14,000 residential transactions were conducted by the Centris® system in the fourth quarter of last year. This is a decline of about 5 per cent compared to the same period in 2012.

During this period, all three residential categories (freehold homes, condominiums and small rental apartments) recorded a decrease in sales compared to the same period last year.

Freehold home sales recorded a decrease (-4 per cent) similar to the overall average, while the condominium segment registered a similar decline (-3 per cent). Transactions of small rental apartments decreased more significantly (-13 per cent).

An analysis of the seasonally adjusted quarterly sales data shows a break in the upward trend that began in the middle of last year. Nevertheless, considering the labour market outlook, we expect the annual total for the year 2014 will increase compared to last year.

The decrease in sales combined with an increase in listings has contributed to a slowdown in the growth rate of average price. On a seasonally unadjusted basis, the average price for all homes traded by Centris® in the fourth quarter was \$ 273,436, up by about 2 per cent from the last quarter of the 2012. Analysis of the average price by market segment reveals a growth of 2 per cent for freehold homes, of 5 per cent for small rental apartments and no variation in the case of condominiums. These results are consistent with the market conditions in the respective segments.

## CMHC Rental Market Survey (Fall 2013)

According to the results of the CMHC fall 2013 rental market survey, the overall vacancy rate for Quebec's urban centres (10,000 inhabitants and over) remained essentially unchanged from October of last year, having reached 3.1 per cent in 2013, compared to 3.0 per cent in 2012.

Regionally, most of the province's 45 urban centres did not see any change in their vacancy rates compared to October 2012. Nearly half of them did not register any statistically significant changes, and most of those that did posted increases that were relatively small overall.

While the changes in rental market conditions across Quebec continued to reflect the effects of the fundamentals on supply and demand, the diverse prevailing environments were such that these impacts varied depending on the areas.

The addition of new units to the rental housing supply remained slow in several large urban centres in Quebec over the past year. Investors focused on the more profitable condominium segment. That said, several agglomerations still registered increases in their rental housing supply, which affected their markets.

Over the same period, demand remained significant overall. In addition to the effect of the stable net migration, it should be noted that the movement to homeownership probably slowed down (weakened by the new financial framework and the stagnant job market conditions).

## Economic Indicators

According to the latest economic accounts for the province of Quebec, GDP (at market prices) rose by 0.9 per cent in real terms in the third quarter 2013 (+0.7 per cent in Canada). This follows a decline of 0.5 per cent in the second quarter. An increase in domestic demand is the source of this result. A decline in the trade balance slowed the rise. On a cumulative basis, real GDP grew by 1.2 per cent compared to the first three quarters of 2012 (1.6 per cent in Canada).

According to the latest results of Statistics Canada Labour Force Survey, the downward trend in employment (started in June) came to a halt in the fourth quarter of 2013. Between October and December, the average number of jobs increased by 0.54 per cent compared to the same period in 2012. For the entire year

2013, employment grew by 47,800 jobs (1.2 per cent) of which 27,500 (0.9 per cent) full-time. An increase in the labour force pushed up the unemployment rate Quebec, which stood at 7.7 per cent in December (7.2 per cent in Canada and 7.9 per cent in Ontario).

## Migration

According to the latest population estimates from Statistics Canada (third quarter 2013), total net migration for Quebec decreased significantly compared to the same period last year. This result is attributable to a significant increase in interprovincial deficit and a decline in net international migration. For the first three quarters of 2013, the balance decreased (-5,193 persons) in relation to the same period of 2012, due to a deterioration of net interprovincial and international migration.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
