How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website, www.statcan.gc.ca.

You can also contact us by

e-mail at infostats@statcan.gc.ca

telephone, from Monday to Friday, 8:30 a.m. to 4:30 p.m., at the following toll-free numbers:

- Statistical Information Service 1-800-263-1136
- National telecommunications device for the hearing impaired 1-800-363-7629
- Fax line 1-877-287-4369

Depository Services Program

- Inquiries line 1-800-635-7943
- Fax line 1-800-565-7757

To access this product

This product, Catalogue no. 51-210-X, is available free in electronic format. To obtain a single issue, visit our website, www.statcan.gc.ca and browse by "Key resource" > "Publications."

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, this agency has developed standards of service that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published at www.statcan.gc.ca under "About us" > "The agency" > "Providing services to Canadians."

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published
- * significantly different from reference category ($p < 0.05$)

Acknowledgments

Statistics Canada would like to thank all of the respondents and data suppliers whose participation has enabled us to provide the statistical information contained in this publication.

The information found in this publication could not have been produced if not for the cooperation of our respondents and data suppliers.

This publication was prepared by **Kathie Davidson**, **Conrad Ogrodnik**, **John Scolli** and **Bev Pomfret** of the Aviation Statistics Centre (ASC) of the Environment, Energy and Transportation Statistics Division (EETSD) under the general direction of **Kevin Roberts**, Director, EETSD, **Michael Scrim**, Assistant Director, EETSD and **Ed Hamilton**, Chief, ASC.

Note to users

Data presented in this issue of the publication supersede previously published statistics.

Analysis

In 2013, the number of take-offs and landings recorded at 137 Canadian airports without air traffic control towers was 640,608 movements. Seven airports recorded more than 20,000 take-offs and landings each. These airports—Goose Bay, Newfoundland and Labrador (32,119 movements), Peterborough, Ontario (30,162), Moosonee, Ontario (26,847), Red Lake, Ontario (24,288), Barrie-Orillia-Lake Simcoe Regional, Ontario (22,583), Comox, British Columbia (20,513) and Trois-Rivières, Quebec (20,374)—accounted for 28% of the movements during the year.

There were 506,944 itinerant movements (flights from one airport to another) recorded by 118 airports without air traffic control towers in 2013. Goose Bay, Newfoundland and Labrador, the most active site, represented 6.3% of the total itinerant movements. It reported 32,119 take-offs and landings, down 8.7% from 2012.

There were 104,282 local movements (flights that remain in the vicinity of the airport) recorded by 73 airports without air traffic control towers in 2013. Peterborough, Ontario (21,835 movements) and Barrie-Orillia-Lake Simcoe Regional, Ontario (15,448) reported the greatest number of local movements in 2013.

1. The "number of days reported" reflects the days that the airport reported take-offs and landings. It may not be the same as the number of days that the airport was open for operation. The information is provided to assist readers in making comparisons to other time periods, i.e., to indicate whether the movement counts represent the full year or a partial year.
2. Total, itinerant and local movements: The value may not equal the sum of total itinerant and local movements. This is due to some airports reporting only aggregated data (total itinerant plus local movements) rather than the two components. See Appendix I, Factors influencing the data.

Data quality and limitations

Although every effort is made to ensure the quality of the data, the statistics relative to airports where there is no air traffic control tower or flight service station should be used with due consideration for their limitations.

The validity of the source data reported is controlled through the use of computerized edit programs. Identified errors originating with the source documents or with data transmission are manually corrected by Aviation Statistics Centre editing staff.

To help respondents maintain a high level of accuracy in reporting, the Aviation Statistics Centre issues instructions explaining the various concepts of the required source data and the method of completing the forms. Respondents are also furnished with an "Air traffic designators" handbook (TP 143) showing the official Transport Canada aircraft type designators and the designators of various domestic and international air carriers. This handbook and another titled "Canada Flight Supplement" listing various airport codes, serve as reference to ensure the reporting of the proper aircraft identity and the last stop or next stop of flights at reporting airports.

At airports without towers or flight service stations, survey respondents, in performing their various assignments, are not always aware of all aircraft movements at their airport. For example, at small airports the airport manager may be responsible for both the administration and maintenance of the station facilities. At some airports the Daily air traffic records are filed by flying club managers who may not be completely familiar with other activities at other areas of the airport.

At airports with flying school operations it is sometimes difficult to record each individual local aircraft movement. In such cases, the Aviation Statistics Centre would advise the airport manager to report local movements based on hours expended in flying training operations. Observations have shown that, on average, six circuits can be made during each hour of flying training. Therefore, 12 local aircraft movements would be counted for each hour of flying training. At stations where the circuits demand a different norm, the respondent will make corrections accordingly.

Methodology

Airports without air traffic control towers

Survey universe

The statistics in this publication reflect the number of aircraft movements reported to the Aviation Statistics Centre by airport and carrier personnel, members of flying clubs and employees of various levels of government at airports without control towers across Canada. There are approximately 6,000 aerodromes in Canada, including land (runways and/or heliports) and water facilities. Of these, approximately 1,300 are airports operating under licences issued by Transport Canada (including those listed in 51-209-X and most of those listed in this publication). Criteria for inclusion in this publication are the size and scope of operation and the importance in establishing regional traffic patterns.

Coverage

The statistics appearing in this publication were compiled in most cases from daily air traffic records received by the Aviation Statistics Centre. The data for 19 of Manitoba's airports were submitted by Manitoba Highways and Transportation (see Factors influencing the data in Appendix I). The data for 12 of Quebec's airports were submitted by the Kativik Regional Government (see Factors influencing the data in Appendix I).

The daily air traffic records (Form 06-0065) are designed to capture three data items for each aircraft arrival and/or departure for itinerant movements, and two items for local movements. Section A of the record dealing with itinerant movements reports the following information for each movement:

- (a) the aircraft registration or air carrier code and flight number;
- (b) the aircraft type;
- (c) the last station before landing at the reporting airport or the next station after take-off.

Section B of the record provides for the reporting of the number of local civil and local military movements for each day.

Due to revisions, the sum of monthly totals released in Aircraft Movement Statistics: Airports Without Air Traffic Control Towers (TP 141) 51-008-X, may not equal the annual totals published in this report.

The daily air traffic records are completed on a daily basis and mailed or sent electronically to the Aviation Statistics Centre where they are registered and edited for clarity and reliability. Survey respondents are contacted by telephone to follow up for non-response.

The Aviation Statistics Centre maintains a data base of parameter files of current information on all registered aircraft. Other parameter file information includes registered aircraft identifications and their corresponding aircraft types, gross take-off weights, types of power plant (piston, jet or turboprop); whether the aircraft are fixed wing, helicopters or gliders. This information also provides a basis for identifying type of flight (commercial, private and government) and the geographical area in which the flight takes place. The storage of this information allows for a reduction in the reporting burden of the survey respondents and limits the element of human error associated with the preparation of source documents.

Appendix I

Appendix I: Factors influencing the data

Data presented in this issue of the publication supersede previously published statistics.

1. Aggregate data only are available for the 19 airports reported by the Manitoba Department of Highways and Transportation listed below:

- Berens River
- Bloodvein River
- Brochet
- Cross Lake
- Gods Lake Narrows
- Gods River
- Ilford
- Lac Brochet
- Little Grand Rapids
- Oxford House
- Pikwitonei
- Poplar River
- Pukatawagan
- Red Sucker Lake
- Shamattawa
- South Indian Lake
- Tadoule Lake
- Thicket Portage
- York Landing

2. Aggregate data only are available for the 12 airports reported by the Kativik Regional Government in Quebec listed below.

- Akulivik
- Aupaluk
- Inukjuak
- Ivujivik
- Kangiqsualujjuaq
- Kangiqsujuaq
- Kangirsuk
- Puvirnituq
- Quaataq
- Salluit
- Tasiujaq
- Umiujaq

3. Aggregate data only are available for Tillsonburg, Ontario.

4. In January 2013, recording operations at Welland Niagara, Ontario temporarily ceased until the new owner is established.

5. In the spring of 2011, recording operations at Guelph, Ontario temporarily ceased until the new owner is established.

6. In January 2011, the airport at Nanisivik, Nunavut was closed due to cessation of mining operations. A new airport was opened at Arctic Bay, Nunavut.

Factors which may influence the data

2013

Significant winter storms struck much of Ontario, Quebec and the Maritime provinces forcing flight cancellations and delays across Canada in December 2013.

2012

Significant winter storms struck eastern Canada and the Maritime provinces in December 2012 forcing numerous flight cancellations and delays.

2011

Hurricane Irene struck the northeastern United States and eastern Canada in August 2011 forcing numerous flight delays and cancellations.

Significant winter storms struck the northeastern United States, Atlantic Canada and Britain in January 2011 forcing flight delays and cancellations. These winter storms continued to affect the northeastern United States and eastern Canada in February resulting in further flight delays and cancellations.

2010

Winter storms struck the north-eastern United States, Atlantic Canada and Britain in December 2010 resulting in numerous flight delays and cancellations.

Lightning storms, combined with dry conditions, caused a rash of forest fires in northern Manitoba and Saskatchewan and in the British Columbia interior in July 2010.

Significant winter storms struck the eastern seaboard of Canada and the United States in early February 2010, forcing flight delays and cancellations.

The Vancouver 2010 Winter Olympics resulted in regular carriers scheduling additional flights and an influx of corporate jets in February 2010. Conversely, airspace restrictions and enhanced security reduced the number of movements of the smaller local carriers.

2009

A major winter storm in the eastern United States and Atlantic Canada resulted in the cancellation of flights between Canadian airports and cities along the eastern seaboard.

Appendix II

Glossary of terms

Air carrier

Aircraft operators, licensed by the Canadian Transportation Agency to transport persons, mail and/or goods by air.

Level I: Effective 2010, this includes every Canadian air carrier that, in the calendar year immediately preceding the reporting year, transported at least 2 million revenue passengers or at least 400 thousand tonnes of cargo.

Level II: Effective 2010, this includes every Canadian air carrier that, in the calendar year immediately preceding the reporting year, transported at least 100 thousand, but fewer than 2 million revenue passengers, or at least 50 thousand but less than 400 thousand tonnes of cargo.

Level III. Effective 2010, this includes every Canadian air carrier not classified in reporting level I or II that, in the calendar year immediately preceding the reporting year, realized gross revenues of at least 2 million dollars for the provision of air services for which the air carrier held a licence.

Level IV. Effective 2010, this includes every Canadian air carrier not classified in reporting level I, II or III that, in the calendar year immediately preceding the reporting year, realized gross revenues of less than 2 million dollars for the provision of air services for which the air carrier held a licence.

Aircraft movement

A take off, a landing, or a simulated approach by an aircraft. ATC Manops amendment 8-8-83. NC-703.

Class of operation

Aircraft movements are classified as either "Itinerant" or "Local".

Commercial

Flights by aircraft operators licensed by the Canadian Transportation Agency to perform commercial air services. Commercial operations are divided into two categories: Air carrier and Other commercial.

Domestic itinerant movements

Movements, at a Canadian airport, of aircraft departing to or arriving from another point in Canada.

FSS

Flight service station.

Government-Civil

Aircraft owned by federal, provincial and municipal bodies as well as foreign states, but excluding those owned by crown corporations, boards and commissions. Such aircraft are coded "3" under "Purpose" in the Canadian civil aircraft register.

Government-Military

Aircraft of any branch of the armed forces of any nation.

I.F.R. flight

A flight conducted in accordance with Instrument flight rules.

International movements

Movements, at a Canadian airport, of aircraft arriving from or departing to a point outside Canada. International movements are subclassified into "transborder" (to or from a point in the United States including Alaska, Hawaii, and Puerto Rico), and "other international" (to or from points in countries other than Canada and the United States). Since aircraft movements are reported on the basis of place "arrived from" or "departed to", an arrival at Halifax airport from London, England would appear under "other international". If the same aircraft moved on to Toronto, both the departure at Halifax and the arrival at Toronto would be shown as "domestic".

Itinerant movements

At airports with control towers and/or flight service stations: for the purpose of completing air traffic records, itinerant movements are considered as movements in which aircraft proceed to or arrive from another location; or where aircraft leave the circuit but return without landing at another airport. At airports without control towers: an aircraft movement in which the aircraft arrives from or departs to a point other than the reporting airport; or a movement by an aircraft that leaves the close proximity of an airport and returns without landing at another airport.

Local movements

At airports with control towers and/or flight service stations: for the purpose of completing air traffic records, local movements are considered as movements in which the aircraft remains in the circuit. At airports without control towers: an aircraft movement in which the aircraft remains in the close proximity of the airport. Local movements are often carried out during training flights (touch-and-go), equipment tests, etc.

Maximum take-off weight

The maximum weight for which the aircraft is licensed to operate. For operational purposes, all weights are rounded upwards to the next 1,000 kilograms. Thus 3,200 kilograms becomes 4,000 kilograms.

Other commercial

Flights performed by Commercial aircraft operators not included in the Air carrier categories. Flying schools, agricultural sprayers, water-bombers, aerial photography and survey, etc.

Power plant

The source of propulsion. For example, piston engines, turbo-propellers and jet engines. "Helicopters", in this report, include both piston and turboshaft-driven engines.

Private aircraft

Aircraft used solely for private purposes, not for hire and compensation, which are classified as "Private" or "Private Restricted" in the Canadian civil aircraft register or similar registries of other countries. Owners include individuals, groups and business firms.

Runway 88

Through control zone flights, i.e. flights which communicate with the tower while transiting the tower control zone to another destination without landing at the reporting airport. Data for these runways are not included in the grand total.

Simulated approaches

Movements that are either missed instrument or practice instrument approaches without landing.

TC

Transport Canada.

Tower control zone

A controlled airspace within the proximity of an air traffic control tower, usually within a radius of less than 24 kilometres of the tower.

V.F.R. flight

A flight conducted in accordance with Visual flight rules.

Weight group

The classification of weight classes in groups for statistical purposes.
