

West Nile virus

National Surveillance Report

English Edition
September 22 to September 28, 2013
(Report Week 39)

Canada

Humans:

During surveillance week 39, the Public Health Agency of Canada (the Agency) was informed of 17 human clinical cases and one (1) asymptomatic infection of West Nile virus (WNV): three (3) in Quebec; eleven in Ontario; and four (4) in Saskatchewan. As of week 39, there have been a total of ninety-six clinical cases and three (3) asymptomatic infections reported to the Agency: twenty-six in Quebec; forty-four in Ontario; two (2) in Manitoba; six (6) in Saskatchewan, and twenty-one in Alberta. Of the 96 clinical cases, 31 (32%) were diagnosed as WNV neurological syndrome; 48 (50%) as WNV non-neurological syndrome; and 17 (18%) as unclassified. Three fatal cases (3%) associated with West Nile virus have been reported.

Mosquitoes:

To date (Week 39), a total of 12,237 mosquito pools have been tested for WNV [Quebec (2,112); Ontario (8,642); Manitoba (1088); Saskatchewan (106); and British Columbia (289)]. Of these, 317 (2.6%) mosquito pools tested positive for WNV [Quebec (60); Ontario (196); Saskatchewan (41); Manitoba (19); and British Columbia (1)].

Dead Birds:

A total of 170 dead birds have been tested for WNV by the Canadian Cooperative Wildlife Health Centre. Of these, 80 positives were reported [Quebec (33); Ontario (35); Manitoba (1); Saskatchewan (11)].

Domestic Animals:

A total of thirty-six animals positive for WNV have been reported by the Canadian Food Inspection Agency: Quebec (two horses, one domestic bird); Ontario (two alpacas, seven horses, two birds); Manitoba (two horses); Saskatchewan (eleven horses); and Alberta (nine horses).

National WNV surveillance data and maps can be found on the PHAC website at: <http://www.phac-aspc.gc.ca/wnv-vwn/index.html>

United States

As of week 39, 1135 human cases of WNV have been reported by the Centers for Disease Control and Prevention in the United States. Of these, 529 (47%) were diagnosed as neuroinvasive disease, and 606 (53%) as non-neuroinvasive. Forty-four fatal cases (4%) were reported. Two hundred and forty-eight cases of presumptive viremic blood donors were reported.

http://www.cdc.gov/ncidod/dvbid/westnile/surv&controlCaseCount12_detailed.html

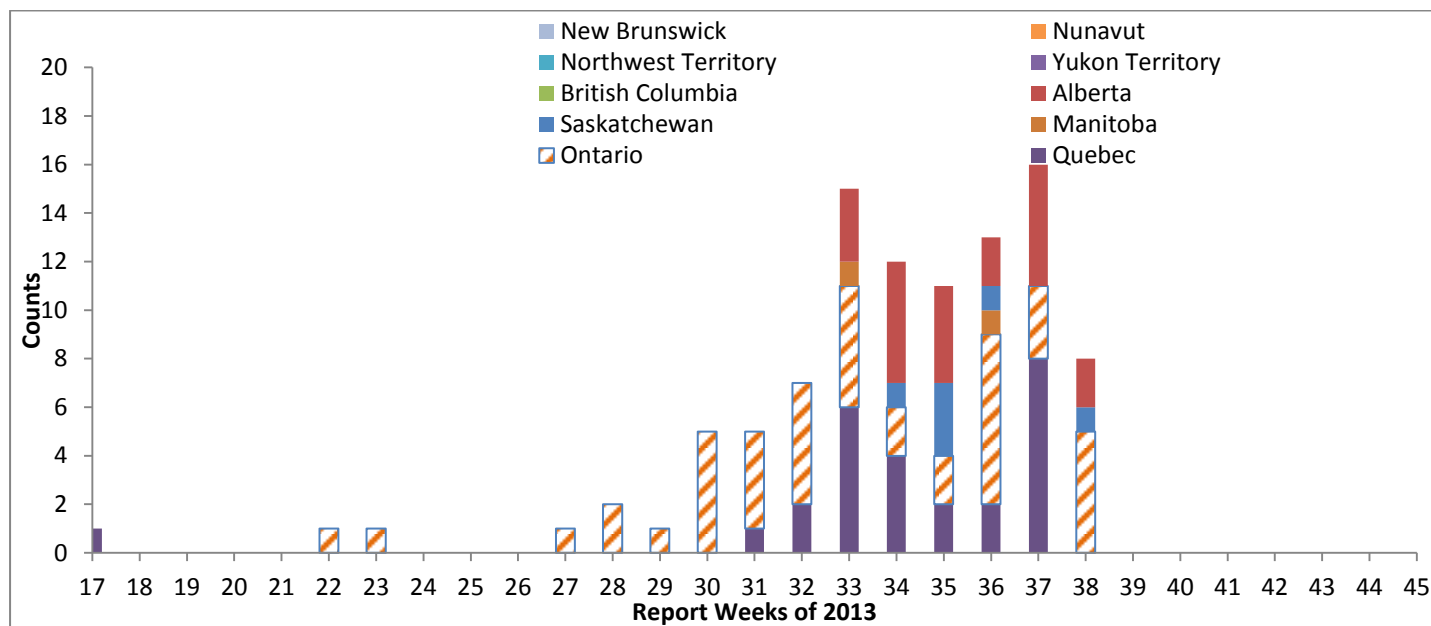

Europe and Neighbouring countries

A total of 686 human cases of WNV have been reported by the European Centre for Disease Prevention and Control. Of these, two hundred and three human cases have been reported in the European Union and the European Economic Area: Croatia (14); Greece (83), Hungary (27), Italy (61); and Romania (18). Four hundred and eighty-three human cases have been reported in neighbouring countries: Bosnia and Herzegovina (2), the Former Yugoslav Republic of Macedonia one (1); Montenegro (2); Serbia (238); the Russian Federation (177); Ukraine (1); Israel (56); and Tunisia (6).

	Total	31	48	17	96	3	3

¹ Total clinical cases is the sum of both probable and confirmed: West Nile virus neurological and non-neurological syndromes, along with any unclassified or unspecified cases.

² Likely related to travel outside the province/territory. These cases are included in either the total clinical cases or West Nile virus asymptomatic infections.

³ Satisfies West Nile virus diagnostic test criteria in the absence of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a nucleic acid amplification test (NAT), by blood operators (i.e. Canadian Blood Services or Hema-Quebec) and is subsequently brought to the attention of public health officials. Blood operators in Canada perform a supplementary West Nile virus specific NAT following any positive donor screen test result.
