Canadian Technical Report of Hydrography and Ocean Sciences

Technical reports contain scientific and technical information of a type that represents a contribution to existing knowledge but which is not normally found in the primary literature. The subject matter is generally related to programs and interests of the Oceans and Science sectors of Fisheries and Oceans Canada.

Technical reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report is abstracted in the data base *Aquatic Sciences and Fisheries Abstracts*.

Technical reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page.

Regional and headquarters establishments of Ocean Science and Surveys ceased publication of their various report series as of December 1981. A complete listing of these publications and the last number issued under each title are published in the *Canadian Journal of Fisheries and Aquatic Sciences*, Volume 38: Index to Publications 1981. The current series began with Report Number 1 in January 1982.

Rapport technique canadien sur l'hydrographie et les sciences océaniques

Les rapports techniques contiennent des renseignements scientifiques et techniques qui constituent une contribution aux connaissances actuelles mais que l'on ne trouve pas normalement dans les revues scientifiques. Le sujet est généralement rattaché aux programmes et intérêts des secteurs des Océans et des Sciences de Pêches et Océans Canada.

Les rapports techniques peuvent être cités comme des publications à part entière. Le titre exact figure au-dessus du résumé de chaque rapport. Les rapports techniques sont résumés dans la base de données *Résumés des sciences aquatiques et halieutiques*.

Les rapports techniques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page de titre.

Les établissements de l'ancien secteur des Sciences et Levés océaniques dans les régions et à l'administration centrale ont cessé de publier leurs diverses séries de rapports en décembre 1981. Vous trouverez dans l'index des publications du volume 38 du *Journal canadien des sciences halieutiques et aquatiques*, la liste de ces publications ainsi que le dernier numéro paru dans chaque catégorie. La nouvelle série a commencé avec la publication du rapport numéro 1 en janvier 1982.

ABSTRACT

Senciarl, D.R., Chen, N.Y., Stead, P., and Colbourne, E.B. 2006. Long-term temperature monitoring program 2002-04, Newfoundland and Labrador Region. Can. Tech. Rep. Hydrogr. Ocean Sci. 247: xi + 493 p.

Monthly summaries of the temperature statistics including minimum, maximum, mean, standard deviations, degree day 0, degree day 4 and the number of observations are presented for thermograph deployments from 2002 - 2004 in the inshore regions of Newfoundland and Labrador. In addition, the temperature time series and location map are presented for the sampling period of each deployment.

RÉSUMÉ

Senciarl, D.R., Chen, N.Y., Stead, P., and Colbourne, E.B. 2006. Long-term temperature monitoring program 2002-04, Newfoundland and Labrador Region. Can. Tech. Rep. Hydrogr. Ocean Sci. 247: xi + 493 p.

On présente ici des résumés des statistiques mensuelles de température, y compris des minima, des maxima, des moyennes, des écarts-types, du degré-jour 0, du degré-jour 4 et du nombre d'observations, pour les thermographes mouillés de 2002 à 2004 dans les régions côtières du Terre-Neuve et du Labrador. On et la série chronologique correspondant à la période d'échantillonnage.

INTRODUCTION

Since the late 1960's fisheries scientists have been monitoring near-shore water temperatures at many locations around the bays and headlands off eastern Canada. The monitoring sites and the measurement periods were selected to meet the objectives of each individual process-oriented project, but all data were processed, archived and published as annual technical reports as part of a Long Term Temperature Monitoring Program (LTTMP) of the Department of Fisheries and Oceans. The data archive that resulted from this program consists of temperature time series from a large number of sites distributed in the near shore region dating back to 1967 in the Newfoundland and Labrador region and to 1978 in the Scotia-Fundy and Gulf of St. Lawrence regions.

The quality controlled time series data from the thermographs are archived at the Northwest Atlantic Fisheries Centre (NAFC), and also available at the website: <http://www.mar.dfo-mpo.gc.ca/science/ocean/>. The data are available upon request. This report presents a summary of the data from each deployment in the Newfoundland and Labrador region from 2002 to 2004. Previous LTTMP data and technical reports in this series are listed in the bibliography.

INSTRUMENTATION

The primary instrument used for collecting water temperatures in the near-shore region during the early years of the program was the Ryan model J-180 and J-90 analogue thermographs which recorded data on paper strip charts that were subsequently digitized upon recovery for processing. These instruments had a temperature range of -5 to 25°C with an accuracy of $\pm 2.0\%$ or 0.6°C. The Ryan TempMentor Digital thermograph was introduced in the mid 1980s followed by digital Hugrún Seamon thermograph in the late 1980s. The Ryan TempMentor thermographs are small digital recording instruments, which can record up to 6361 temperature readings at sample intervals ranging from 1 second to 2 hours. This instrument has a range of -32 to 70°C with an accuracy of $\pm 0.3^\circ\text{C}$. The Hugrún Seamon thermographs, introduced in the late 1980s are compact microprocessor controlled temperature recorders with the electronics and probe housed in a strong waterproof case. This instrument has a temperature range of -2.0 to 38.0°C with an accuracy of $\pm 0.1^\circ\text{C}$ and a resolution of 0.05°C and can store up to 5400 temperature readings with sampling intervals from 1.0 second to 24.0 hours. The Vecom Minilog-T thermograph introduced in 1998 records up to 8064 temperature readings at sample intervals from 1 second to 6 hours. Two versions of this thermograph were used, one with a range of -4 to 20°C with an accuracy of $\pm 0.2^\circ\text{C}$ and a resolution of 0.1°C and one with a range of -5 to 35°C with an accuracy of $\pm 0.3^\circ\text{C}$ and a resolution of 0.2°C. During 2002 - 2004 all thermographs in use at the Department of Fisheries and Ocean's Northwest Atlantic Fisheries Centre in St. John's were digital manufactured by Hugrún and Vemco. The type of instrument is identified on the summary page for each deployment.

CALIBRATION

Each digital thermograph was calibrated prior to its deployment using temperature calibration facilities located at the Northwest Atlantic Fisheries Center. The sensor of each thermograph is

submerged in a Guildline Model 5010 constant temperature water bath of 40% ethylene glycol and water where it is subjected to a series of known stable temperatures. The microprocessor bath control system provides constant cooling and heating for any temperature setting in the range -9.9 to 65.0°C. A controlled temperature is achieved in 10 to 15 minutes and maintained to within 0.002°C. Several thermographs are loaded at one time and recordings are made at -2.0, 0.0, 10.0, 15.0 and 20.0°C. Approximately 4 hours are required at each temperature setting to allow for stabilization of the water bath. The thermographs are then calibrated by entering the calibration data in a factory supplied software package. Data collected by these instruments are then automatically corrected when the data is downloaded to the computer.

DATA ANALYSIS

The data translation, calibration and downloading was carried out using the PC software supplied by the manufacturer of each instrument. All data were then archived into a common digital format on PCs for further processing using custom in-house software. Any large spikes in the data were edited and replaced by the average of the adjacent two valid points. Each temperature data time series was also trimmed by removing invalid data collected during deployment and recovery of the instrument.

DATA PRODUCTS

The quality controlled time series was used to generate monthly temperature statistics for each deployment. These included minimum and maximum temperature and the day that it occurred, the mean temperature, standard deviation, degree-day 0, degree-day 4 and the number of samples for the month. It should be noted that although the statistics are generated for each month during the deployment, some months are incomplete so that the statistics only apply to the portion of the month in which there were observations. No attempts were made to extrapolate to the full month in these cases.

In this report we present a one page summary of the deployment, which includes; station name and station number, instrument type and serial number, station position and instrument deployment depth, water depth, sampling interval, and deployment and recovery dates. A table of the monthly statistics follows for each deployment period. The complete data set for each station is then presented as a time series plot on a time scale of 120 days per panel. If the data record was more than 120 days, a second 120-day panel was produced beneath the first.

A station location map is also provided with each time series plot. The boundaries of the unit fishing areas in the inshore regions defined by the Department of Fisheries and Oceans are shown in Figure 1. The data in this report are organized by year in alphabetical order in each unit area starting in NAFO Division 2H and proceeding clockwise around the island of Newfoundland. Data from deployments in various freshwater rivers and ponds around Newfoundland are listed in a separate appendix at the end of the report in alphabetical order. For the purpose of processing, deployment sites were given a unique station number starting at 100 for each year. This report contains data from a total of 82 deployments of which 20 were in freshwater for 2002, 85 deployments of which 19 were in freshwater for 2003, 37 deployments of which 17 were in freshwater for 2004. A complete list of deployments during the three years is contained in the table of contents. Some of the time

series actually started in 2001 but the instruments were not recovered until 2002. The locations of all deployment sites during 2002 and 2004 are shown in Figure 2, identified by station number.

ACKNOWLEDGMENTS

We thank the fisheries scientists at the Northwest Atlantic Fisheries Center for making the thermograph data available.
