

# RENTAL MARKET REPORT

## Ontario Highlights\*

CANADA MORTGAGE AND HOUSING CORPORATION

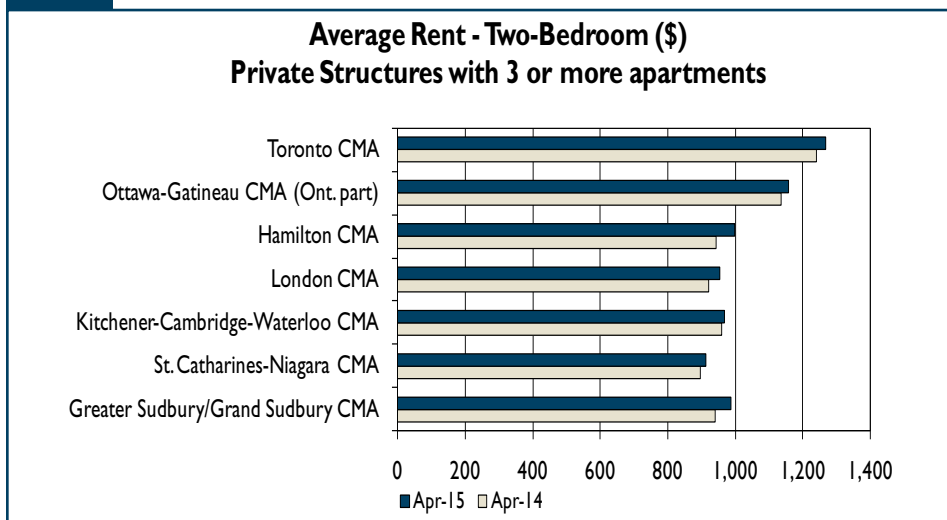

Date Released: Spring 2015

Figure 1

Source: CMHC Rental Market Survey

Figure 2

Source: CMHC Rental Market Survey

\*Urban centres with a population of 10,000 + are included in the survey.

## Highlights

- Ontario vacancy rate declined to 2.5 per cent in April of 2015, from 2.8 per cent one year ago.
- Fixed sample 2-bed apartment rents grew at a rate of 2.1 per cent in 2015 versus 2.7 per cent in the spring of 2014.
- Factors exerting downward pressure on vacancy rates include: improving job prospects for young adults and less first time buyer demand.
- Factors exerting upward pressure on vacancy rates include: declining net migration and more condominium rental completions.

## Overview: Vacancy Rates Edge Lower in Most Urban Centres

According to Canada Mortgage and Housing Corporation's (CMHC) Spring Rental Market Survey, Ontario vacancy rates<sup>1</sup> edged lower to 2.5 per cent in spring 2015 from 2.8 per cent in the spring of 2014. Vacancy rates moved lower for one and two bedroom units while remaining stable for bachelor and three bedroom units. The decline in the provincial vacancy rate was solely due to increasing rental demand as the province wide rental universe remained relatively stable over the past year.

Vacancy rates declined in almost half of all urban centres in Ontario while remaining flat or edging higher elsewhere. The sharpest declines in vacancy rates occurred in Brantford (1.8%), Hamilton (1.8%) and Guelph (0.6%). The lowest vacancy rate was registered in Guelph (0.6%), Barrie (1.7%), and Toronto (1.8%) while the highest vacancy rates were registered in Windsor (4.9%), Thunder Bay (4.7%) and Greater Sudbury (4.6%).

## Economic, Demographic and Supply Factors Impacting Vacancy Rates

Several factors exerted downward pressure on vacancy rates. Youth employment is critical in explaining movements in vacancy rates. While young adults across the province aged 15-24 comprise a slightly smaller number of existing renter households

than say those aged 25-44, their propensity to rent is much higher and more sensitive to changing economic circumstances. According to historical census data, a sizable number of young adults have stayed home longer in Ontario likely due to both education and job market conditions. A pool of potential renters has been built across the province over the post recession period as the job recovery has been gradual for this group. In recent years however, young adults have been more successful in securing employment – encouraging them to depart from the family home and create their own renter household.

The cost gap between owning and renting a home in Ontario continued to increase resulting in fewer renters shifting to ownership housing in the spring of 2015. The rise in the cost gap was fuelled by the price of ownership housing growing well in excess of increases in average apartment rents. First time buyers aged 25-44 are sensitive to changing economic conditions. Most were unable to substitute into a lower priced home from rental accommodation or had difficulty saving enough for their down payment. Furthermore, employment prospects, particularly for households in typical first time buyer ages of 25-44, remained unchanged over the past year – encouraging more households to remain in rental accommodation longer.

Other factors exerted upward pressure on apartment vacancies. According to both CMHC and Urbanation data, investors have

been quite active in recent years purchasing condo units in major markets primarily for investment purposes. CMHC and Statistics Canada census data indicates that the growth in new purpose-built rental supply has not kept pace with the growth in new renter households across the province. Condominium apartments have satisfied a large part of this excess demand as most of the growth in the Ontario rental stock has occurred in secondary rental units such as condominiums. Many of these condominiums purchased by investors in recent years reached the completion and registration phase adding significantly more rental units to the rental market. Some condominium rental units charge above average market rents and thus represent more competition for pricier purpose-built rental units.

Another factor exerting upward pressure on purpose-built unit vacancies has been declining net migration. Net migration to Ontario has slowed in recent years and was a factor less supportive of rental demand. The bulk of this decline was driven by less immigration. According to census data, roughly two thirds of immigrants rent a home when first arriving in Ontario as they need time to establish job tenure and to accumulate savings to qualify for homeownership. Meanwhile, Ontario was also losing more migrants to Western Canada largely due to more plentiful job prospects in regions such as Alberta.

<sup>1</sup> Based on privately-initiated rental apartments structures of three or more units.

## **Ontario Same Sample Rents Grow by 2.1 Per Cent in Spring 2015**

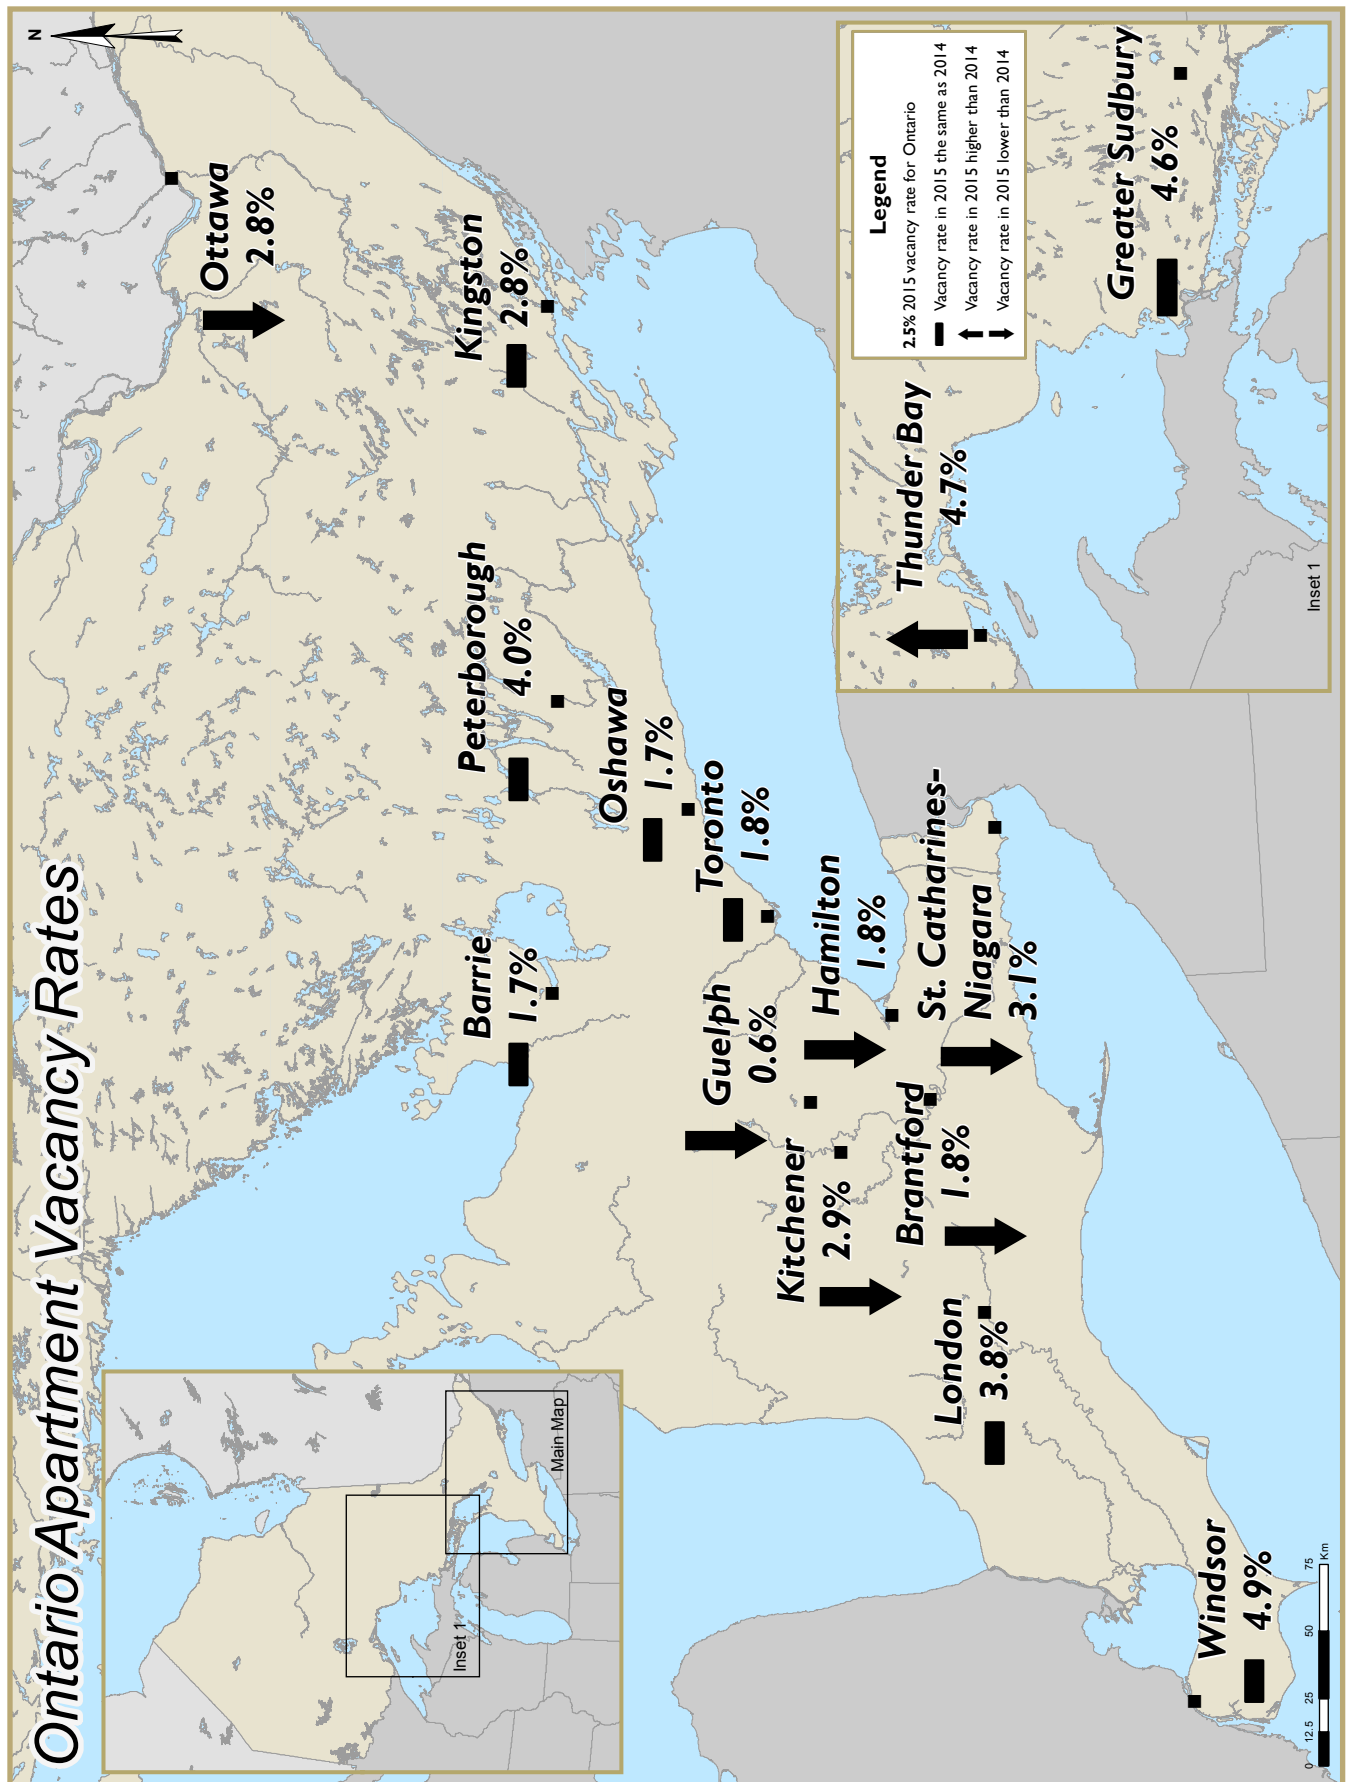

Apartment rents for two bedroom units that were common to both 2014 and 2015 spring surveys<sup>2</sup> rose by 2.1 per cent versus a 2.7 per

cent increase this time last year. Fixed sample 2-bedroom apartment rents grew the fastest in Hamilton (3.5 %), London (3.2%) and Guelph (2.9%) while growing the slowest in Kitchener (1.5%), Peterborough (1.6%) and Ottawa (1.7%).

Modest income growth and more competition from condominium rental units dampened the growth in fixed sample rents across the province, especially for units charging above average rents.

---

<sup>2</sup> When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2014 and 2015 Spring Rental Market, we can get a better indication of actual rent increases paid by most tenants.

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

Please click [Methodology](#) or [Data Reliability Tables Appendix](#) link for more details

## TECHNICAL NOTE:

*Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):*

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

Use caution when comparing changes in statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. These tables include indicators to help interpret changes. ↑ indicates the year-over-year change is a statistically significant increase, ↓ indicates the year-over-year change is a statistically significant decrease, while – indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

**Definitions of Census Areas referred to in this publication are as follows:**

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented in this publication is based on Statistics Canada's 2011 Census area definitions.

### Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
