*Urban centres with a population of 10,000 + are included in the survey.

The vacancy rate rises in Quebec

- The average vacancy rate of privately initiated apartment structures with three units and over stood at 3.5 per cent in April in Quebec urban centers (10,000 or more).
- The variation (+0.6 point) of the nominal rate compared to the one recorded in spring 2014 was statistically significant.
- Among large urban centres, the Québec region (up 1.4 points) recorded the highest variation in the vacancy rate.
- The market was likely tighter in the two- and three-bedroom apartment segments.
- The average rent for two-bedroom apartments was \$714. At the CMA level, the average rent was between \$571 (Trois-Rivières) and \$777 (Québec).

The vacancy rate rises in Quebec

According to the Rental Market Survey conducted in the spring by Canada Mortgage and Housing Corporation (CMHC), the average vacancy rate of private buildings with three units and over stood at 3.5 per cent in April in urban centres (10,000 or more) of Quebec. The change in the nominal rate compared to that recorded in the spring of 2014 (+0.6 percentage point) was significant statistically.

This rise in the vacancy rate at the provincial level was attributable to changes in the Census Metropolitan Areas (CMA) of Montreal and of Québec – which make up nearly 80 per cent of the rental housing stock of Quebec. That said, the Québec region was the only one among CMAs to have recorded a statistically significant variation (+1.4 per cent). With respect to other urban areas, the survey reported an increased rate in agglomerations with 10,000 to 49,999 inhabitants and stability in agglomerations with 50,000 to 99,999 inhabitants (see table).

As for the picture of the market by unit size, whereas the results do not show statistically significant differences, they would suggest that the market was slightly tighter in the case of two- and three-bedroom apartments.

The vacancy rate for three-bedroom apartments was estimated at 2.9 per cent whereas that of bachelor units is 4.2 per cent. That said, given the statistical reliability at the regional level, it is not possible to say that the provincial result was widespread.

According to the survey, the average rent for two bedroom apartments was \$714. At the CMA level, it ranges between \$571 (Trois-Rivières) and \$777 (Québec). In other urban areas, it was situated around the lower part of this range. As for rents by unit size, the picture was congruent with apartment size and its relative scarcity. The survey often showed that the average rent climbed about \$100 with the addition of a bedroom. The estimated change in the average rent for the entire province stood at 1.7 per cent in April 2015.

The rise of the Quebec vacancy rate in the spring of 2015 occurred in the context where supply is increasing and where demand is passing through a phase of decrease. On the supply side, the stock of apartments (purpose built rental or condominium) has been indeed on the rise, while demand has been weaker as a result of less robust labour markets and decreasing net migration.

Caution: Because the period during which the spring survey is held coincides with that during which owners and tenants are negotiating the terms of the lease renewal, the results of this survey must be interpreted with caution. Even when comparing the spring results with those of the same period a year earlier, statistically significant variations may not be related to changes in market conditions.

Montréal CMA

In the Montréal region, the vacancy rate went from 2.7 per cent in April 2014 to 3.3 per cent in April 2015. This variation was not statistically significant.

The vacancy rate went up for one-bedroom apartments, from 2.7 to 4.2 per cent, and remained stable for the other apartment categories.

The decrease in net migration and the greater competition coming from the secondary (condominium) market restricted, to a certain degree, demand for purpose built rental apartments.

The average rent for a two-bedroom apartment was estimated at \$742. The estimated change in the average rent was 1.8 per cent.

Québec CMA

The rental market eased in the Québec CMA: the vacancy rate went up from 1.8 per cent to 3.2 per cent between April 2014 and 2015.

This increase of the share of vacant apartments was mostly observed in the two-bedroom apartment category, where the rate went from 1.6 per cent to 3.4 per cent between the two last surveys.

The easing of the market is explained by a relatively unchanged demand and the greater arrival of new rental units than a year ago.

As well, the average rent for a two-bedroom apartment was \$777 last April, making it the highest average rent among the provinces large urban centres. The estimated change in the average rent was 1.7 per cent.

Gatineau CMA

The vacancy rate in the Quebec part of the Ottawa-Gatineau CMA came in at 6.2 per cent this spring, compared to 5.8 per cent at the same time last year. The regions rental market was thus the most relaxed of the provinces CMAs. Moreover, this result applied to all apartment categories.

This result reflects relatively weak rental demand and stable supply. In fact, in the region, the increased competition coming from the secondary (condominium) market continues to reduce demand in the purpose built market.

The average rent for a two bedroom apartment was estimated at \$747, a comparable level to that of the Montréal CMA.

Sherbrooke CMA

The vacancy rate remained stable in the Sherbrooke CMA (4.2 per cent). Moreover, no significant variations were observed in any market segment.

Despite a decline in recently completed rental units, demand was likely weakened by the move toward ownership, as evidenced by the rebound in activity on the resale market.

The average rent for a two-bedroom apartment in the CMA was \$607. According to the survey, the estimated change in the average rent was 1.8 per cent.

Trois-Rivières CMA

In the Trois-Rivières CMA, the market situation remained stable. The vacancy rate was estimated at 3.4 per cent in April 2015.

The rise in demand, generated by a slight growth in employment, cancelled out a proportional increase in supply.

The average rent for a two-bedroom apartment was \$571 according to the April CMHC survey. Between April 2014 and April 2015, the estimated change in the average rent was 1.3 per cent.

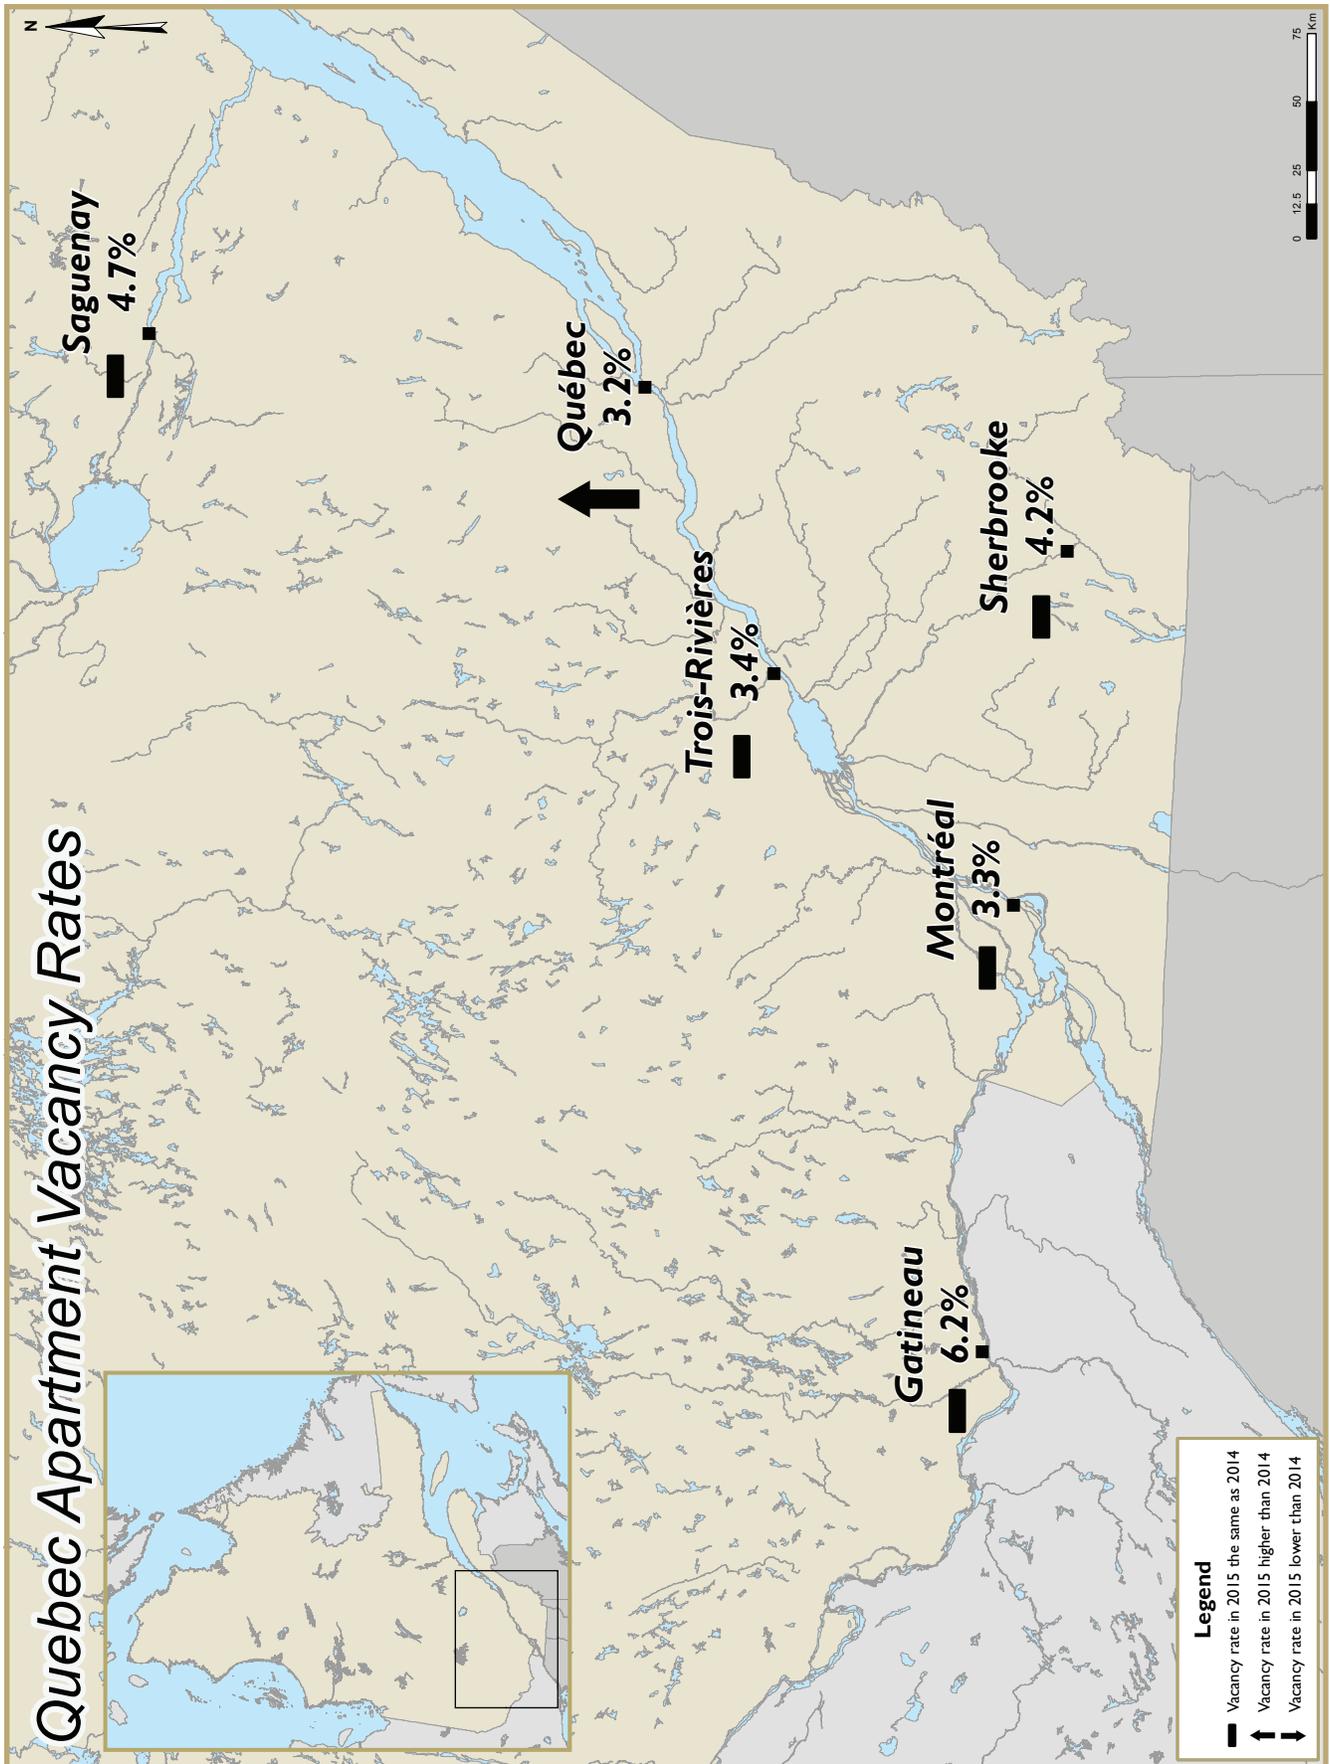

Saguenay CMA

In the Saguenay CMA, the vacancy rate came in at 4.7 per cent in April. The variation (+0.6 point) of the nominal rate, when compared to that recorded in the spring of 2014 was not statistically significant.

The market remained less tight in the smaller apartment segments.

The stability of the vacancy rate stems from unchanged supply and demand. On the supply side, few apartments were newly completed. With regard to demand, the decrease in the move towards ownership somewhat compensated a decline in the population aged 15 to 24 years.

The average rent for a two-bedroom apartment was estimated at \$583. The estimated change in average rent was 1.4 per cent.

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

Use caution when comparing changes in statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. These tables include indicators to help interpret changes. ↑ indicates the year-over-year change is a statistically significant increase, ↓ indicates the year-over-year change is a statistically significant decrease, while – indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented in this publication is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
