

# HOUSING NOW

## Regina CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2015

## Highlights

- Total housing starts trended lower in the first quarter, led by reduced single-detached construction
- Elevated new home inventory has prompted a slower pace of starts so far this year
- Buyer's market conditions and weaker economic fundamentals contributed to negative resale price growth in the first quarter

Figure 1

\* SAAR: Seasonally Adjusted Annual Rate

<sup>1</sup> Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

## New Home Market

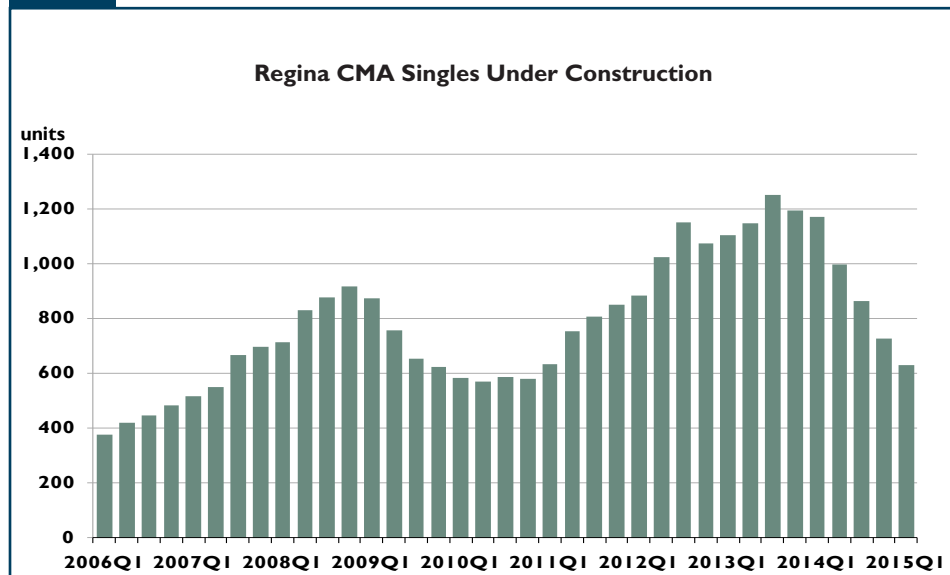

Housing starts in the Regina Census Metropolitan Area (CMA) were trending at 1,636 units in March compared to 1,930 in February and 2,041 in January. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Regina CMA were down 29 per cent in the first quarter of 2015 at 264 units compared to 371 in the same period a year earlier. The most pronounced reduction occurred in the single-detached sector where starts declined 51 per cent in the first three months of this year compared to the same period one year prior. Each month in the first quarter recorded year-over-year reductions in total starts as slower employment growth and lower net migration, combined with elevated inventory, prompted local builders to initiate fewer starts than in the previous year.

From January to March, builders in Regina began construction on 81 single-detached homes, significantly fewer than the 165 units started in the same period of 2014. Like total starts, all three months in the first quarter recorded year-over-year reductions in the single-detached segment, as builders sought to manage elevated inventory in the face of economic uncertainty brought on by falling oil prices and rising supply in the resale market.

As a result of slower single-detached production in recent months, the under construction count in Regina declined to 629 units in the first quarter of 2015, a decrease of 46 per cent from 1,169 in the same period a year earlier, and the lowest number since the first quarter of 2011. Meanwhile, local builders completed

Figure 2

Source: CMHC

a total of 177 single-detached homes in the first three months of 2015, down 5.9 per cent from 188 in the corresponding period one year prior. By comparison, absorptions during the first quarter rose 4.2 per cent to 197 units compared to 187 in the same period the previous year. Nonetheless, the inventory of complete and unabsorbed single-detached units remained elevated, at 140 in March, up 43 per cent from March 2014. Spec units continued to represent a significant portion of Regina's single-detached inventory and have more than doubled this year from the previous year.

At an average of \$505,815, the price of a single-detached home absorbed in the Regina CMA was 4.5 per cent higher in the first quarter of 2015 than a year earlier, but much lower than the annual average absorbed price of \$514,165 in 2014. A slower pace of production has contributed to a modest reduction in Regina's contractor selling prices measured by Statistics Canada's New Housing Price Index (NHPI), which declined by an average of 0.4 per cent in February from the previous year.

Multi-family starts, which include semi-detached units, rows, and apartments, totalled 183 units in the first quarter, 11 per cent fewer than 206 in the same period of 2014. Despite a 19 per cent reduction in multi-family starts in 2014, rising inventory has prompted builders to further slow the pace of production so far this year. Semi-detached and row starts were both lower year-over-year in the first quarter, though the most pronounced reduction was for rows, which declined to only 4 units in the first quarter from 34 units in the same period one year prior. In contrast, local builders initiated 157 apartment units in the first quarter, up 38 per cent from the first quarter of 2014. Of these apartments, 70 per cent were intended for Regina's rental market.

In the ownership market, builders completed 191 multi-family homes, up from 175 in the corresponding quarter of 2014. By comparison, multi-family absorptions for ownership totalled 203 units during the first three months of 2015, 48 per cent more than the 137 units absorbed in the first quarter the previous year. At 301 units in March 2015, the inventory

Figure 3

Source: CMHC

of complete and unabsorbed multi-family units in the ownership market was more than three times the 94 units recorded in the same month one year prior. With builders continuing to initiate fewer projects so far this year, the number of multi-family units under construction for all tenures stood at 1,583 in March, down almost 29 per cent from the same month in 2014. On a year-over-year basis, construction volumes for multi-family dwellings in Regina have been contracting steadily for the past four consecutive quarters.

### Existing Home Market

Residential MLS® sales in Regina totalled 640 units in the first quarter of 2015, a decrease of 3.3 per cent from 662 transactions in the corresponding period of 2014. The reduction in sales can be attributed to moderating outlooks for employment growth and net migration brought on by oil price reductions and declining government revenues. On a seasonally-adjusted basis, MLS® sales trended lower in the first quarter of 2015 from the fourth quarter of 2014.

On the supply side, active listings in Regina averaged 1,836 units from January through March 2015, up 19 per cent from 1,540 in the same period a year earlier. The gain was driven by an 8.5 per cent year-over-year increase in new listings to 1,937 units in the first quarter, a result of move-up buying and a rising number of newly constructed homes being

listed for sale on the MLS®. Given higher supply and lower demand, the sales-to-active listings ratio declined to 11.6 per cent in the first quarter from 14.3 per cent in the first quarter of 2014. Regina's average days on market rose to 53 from 47 under the same comparison.

The combination of buyer's market conditions and moderating economic fundamentals resulted in a 6.8 per cent year-over-year decline in Regina's average MLS® price to \$299,725 in the first quarter. Likewise, the seasonally-adjusted average resale price in Regina declined in the first quarter of this year from the fourth quarter of 2014.

## Economy at a Glance

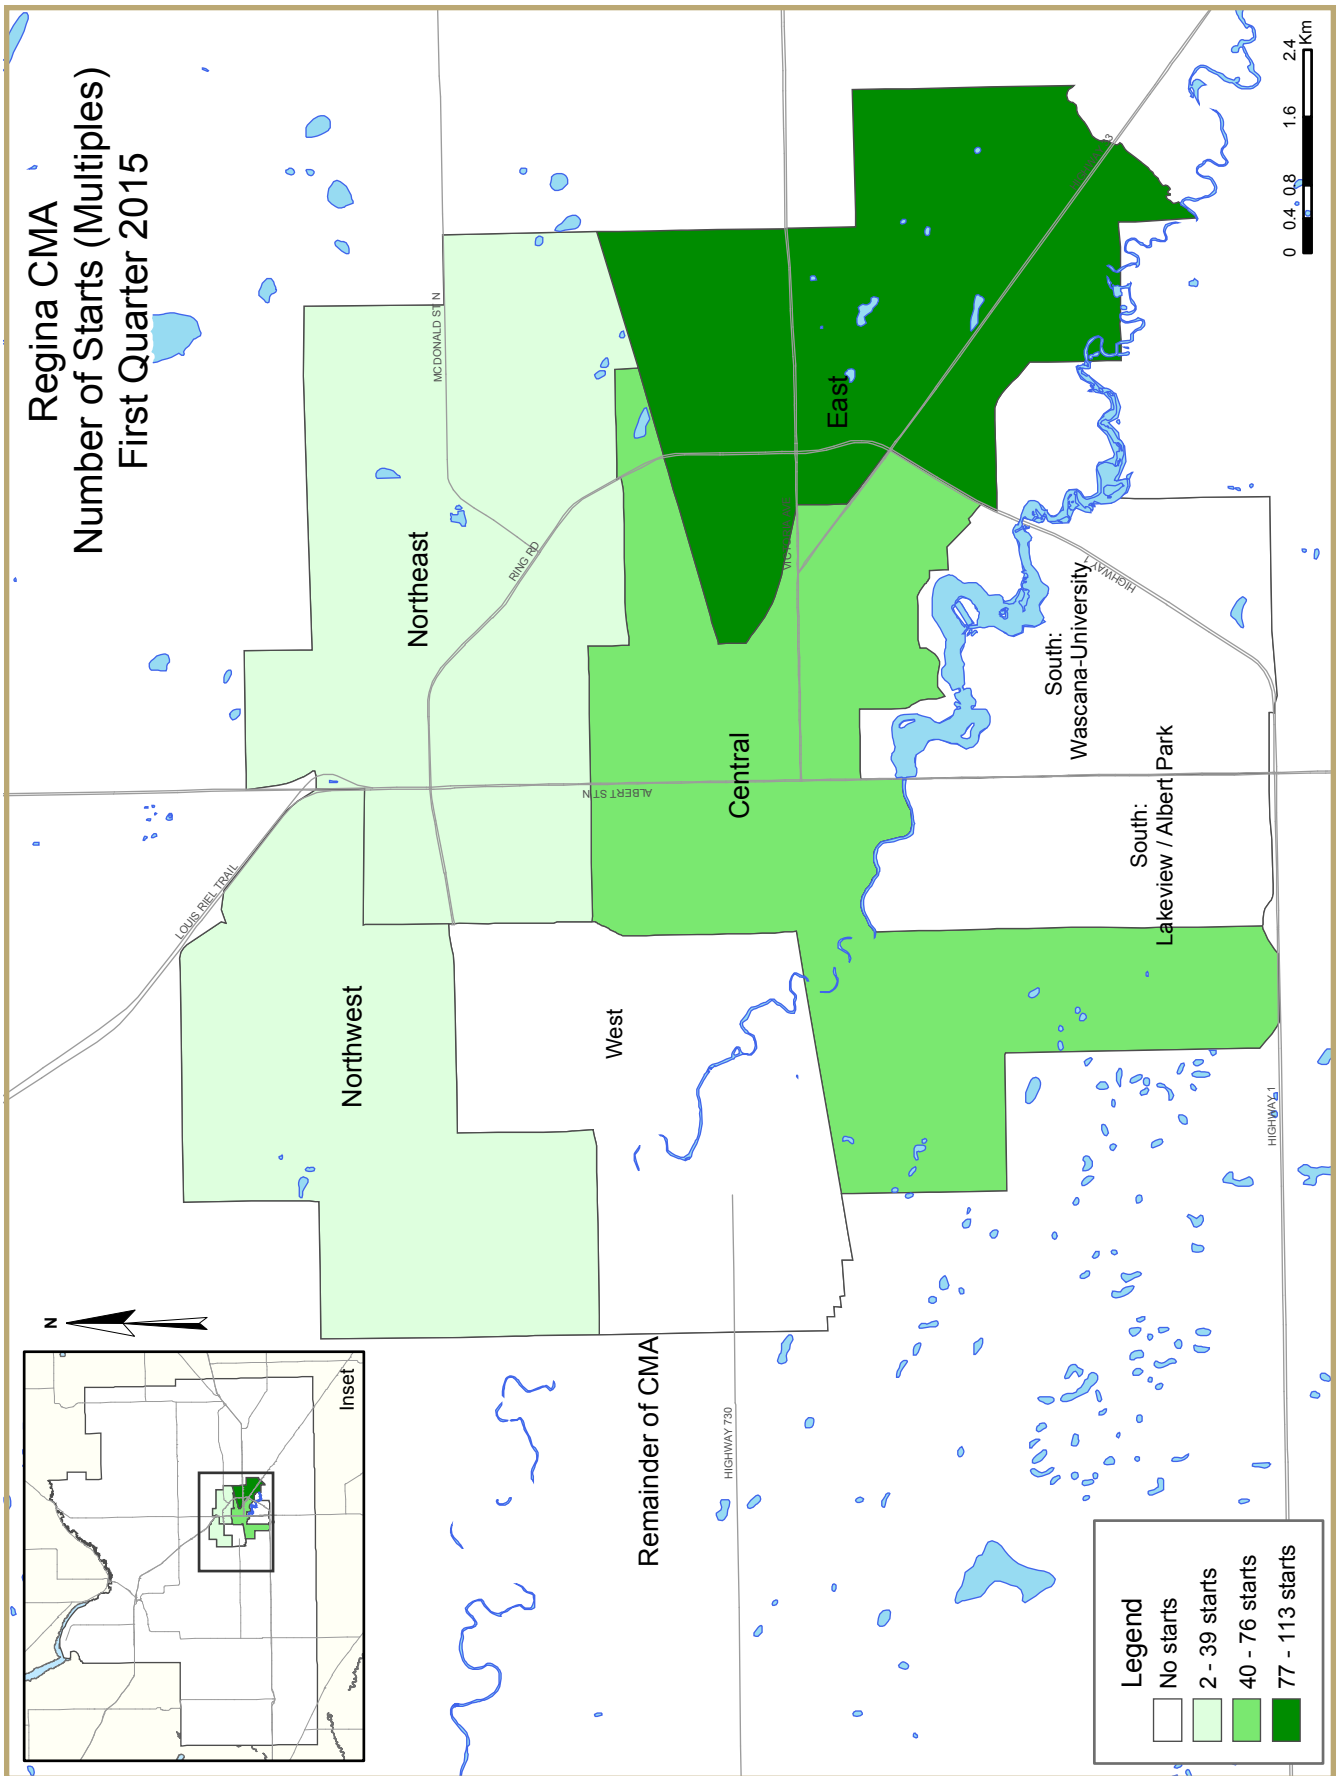

After a gain of 0.4 per cent in 2014, the pace of employment growth in Regina improved slightly during the first quarter of 2015, but was still slower than the expansion recorded during the past few years. The average number of people working in all industries rose 1.3 per cent to 135,900 in the first three months of this year from 134,100 in the corresponding period one year prior. The 1,800 new positions created in the quarter were mostly full-time jobs, which more than offset the loss in part-time roles and contributed to an increase in Regina's average weekly earnings to \$1,038 in the first quarter from \$948 in the same period the previous year. With additions to the labour force outpacing employment growth, Regina's seasonally adjusted unemployment rate rose to 4.9 per cent in the first quarter of 2015 from 3.6 per cent in the final three months of 2014.

Reductions in oil prices towards the latter part of last year had a dampening effect on the outlooks for investment and employment growth in Saskatchewan, which moderated total net migration to the province in the final two quarters of 2014. From January through December 2014, Saskatchewan attracted a total of 11,603 net migrants, 11.5 per cent fewer than the 13,106 persons that arrived in the province in 2013. Reductions were recorded for both net interprovincial and non-permanent migration, though the decline was more pronounced for the non-permanent segment. Non-permanent residents, which include temporary foreign workers, foreign students and refugee claimants, recorded a net loss of 328 people in 2014 compared to a gain of 2,271 migrants in 2013. On a positive note, a total of 11,434 international migrants arrived in Saskatchewan in 2014, up 11 per cent from 10,304 in 2013. Despite the overall reduction, net migration to Saskatchewan in 2014 was among the highest levels seen in recent years and remains an important driver of population growth and new household formation in the province.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
