

HOUSING NOW

St John's CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2015

Highlights

- Housing demand declined throughout the St. John's area in the fourth quarter
- Fewer sales subdued price growth for existing homes, while new home prices edged higher
- Buyers' market provided potential homebuyers with a large inventory of homes

*SAAR: Seasonally Adjusted Annual Rate

The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Residential Construction Activity

Housing starts in St. John's, Census Metropolitan Area (CMA) were trending at 1,264 units in December compared to 1,358 in November according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR)¹ of housing starts. Total actual starts trailed 2013's level because of excess new home inventory and weaker demographic and economic conditions in 2014. In fact, the excess inventory of newly built unsold homes caused new home construction activity to decline throughout 2014. This is despite the fact that growth did continue in key economic indicators in 2014 such as the working age population up 1.4 per cent, average weekly earnings up 3.7 per cent and employment up 1.4 per cent.

Total new home construction activity was 40 per cent lower throughout the St. John's area during the fourth quarter, with 332 housing starts compared to 556 a year ago. There were 265 single-detached starts compared to 337 a year ago, for

a decline of 21 per cent. In terms of multiple unit starts, 67 units were started during the quarter compared to 219 during the fourth quarter of 2013, down 69 per cent. The breakdown of multiple unit starts consisted of 55 apartment and other units, seven row and five semi-detached dwellings. Of the 55 apartment and other units, 32 were purpose built rental and 23 were condo. While single-detached new home construction activity declined because of excess inventory of newly completed and unabsorbed homes, multiple unit starts declined because of lower condominium construction activity.

St. John's City totalled 125 housing starts during the fourth quarter versus 261 in the fourth quarter of 2013. There were 68 single-detached starts versus 111 in 2013 and 57 multiple starts compared to 150 in the fourth quarter of 2013. Conception Bay South (CBS) recorded 61 starts

(all single-detached) compared to 73 in the fourth quarter of 2013. Mt. Pearl recorded 26 housing starts (all single-detached) compared to 10 in 2013's fourth quarter and was the only submarket to post an increase in residential construction. Paradise totalled 50 housing starts in the fourth quarter versus 139 a year ago. In Torbay, there were 12 housing starts (all single-detached) versus 13 a year ago. In the remainder of the CMA, there were 58 starts (all single-detached) recorded compared to 60 in the fourth quarter of 2013. In general, the varied size of each submarket and different housing types being built led to the larger, higher volume submarkets of St. John's City and Paradise to record larger declines in construction activity compared to the smaller, less volatile submarkets.

At the end of the fourth quarter, the average price of an absorbed single-detached house in the St. John's area was \$405,617, up 2.7 per cent from the same period last year. In St. John's City, the average price of a new single-detached house increased 6.4 per cent

to \$448,169, which was the highest of all six submarkets. CBS posted an average new house price of \$334,997 during the fourth quarter, down 8.1 per cent. The average new house price also declined in Torbay, down 2.7 per cent to \$442,708. Paradise posted a price of \$412,225 during the quarter, up 8.5 per cent. In Mount Pearl, the average price for a new single-detached home increased 7.6 per cent to \$386,050. The average price of a new single-detached home in the remainder of the CMA submarket was \$413,388 in the fourth quarter. Prices and quarterly changes vary among the geographically diverse submarkets because of the different types of homes being built as well as demand and buyer preferences within each submarket. Total fourth quarter 2014 prices were supported throughout the St. John's area by increased sales in the \$400,000 plus segment, which accounted for 44 per cent of all new homes sold compared to 36 per cent a year ago.

Throughout the entire St. John's area, approximately 72 per cent of new

homes sold for over \$350,000. The fastest growing segment and largest share of the market was the \$400,000 plus segment. Newly built and completed homes are sitting longer on the market in recent months, however, with a 29 per cent reduction in total new home construction activity this year, inventory levels came down from well off their summer peaks.

MLS® Residential Sales and Prices

MLS® residential sales in the St. John's CMA were down 29.2 per cent to 422 units in the fourth quarter versus 596 units during 2013's fourth quarter. With record inventory levels, growth in key economic indicators such as population, income and employment, was not enough to increase housing demand and sales over the previous year. Active listings continued to trend higher during the fourth quarter, further reinforcing buyers' market conditions. With inventory 24 per cent higher, homebuyers had a broad selection of both existing and new homes to choose from. For the St. John's area, there were 1,691 new residential listings compared to 1,625 during the same period in 2013. Fourth quarter active listings averaged 2,510 a month versus 2,027 a year ago. On average, active listings remained on the market for 66 days compared to a similar 68 days during the fourth quarter of 2013. The average price offered for an existing home was 97 per cent of the list price versus 98 per cent last year. At the submarket level, some neighbourhoods within St. John's City, particularly the Churchill Park area remain strong and still demonstrate sellers' market conditions when choice listings hit the market.

The fourth quarter average MLS® residential sales price decreased

3.4 per cent in the St. John's area to \$308,447 compared to \$319,359 during 2013's October to December period. Falling oil prices likely led to reduced demand for existing homes throughout the region in the fourth quarter and contributed to weakness in the average MLS® residential sales price.

Economy at a Glance:

Weekly earnings averaged \$1,008 in 2014, up 3.7 per cent compared to 2013's average of \$972. Average weekly earnings averaged \$1,000, up 2.8 per cent during the fourth quarter compared to \$973 during the fourth quarter of 2013 and ahead of the year-to-date average inflation rate of 2.1 per cent, as reported by Statistics Canada. These earnings levels continue to remain among the highest in Canada, behind Alberta. Increases in 2014 construction activity on the Muskrat Falls and Hebron capital projects offset employment declines associated with the completion of construction at Vale's nickel processing facility in Long Harbour. Much of the recent and projected growth in income and employment stems from the province's record capital project activity, both of which also continue to generate economic spinoff activity in the St. John's area. The recent sharp decline in the price of oil, however, could have a negative impact on some oil related capital projects if companies continue to cut back on their capital expenditure programs. This could also have negative implications on income and employment growth for 2015.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
