

# HOUSING NOW

## Kelowna CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: May 2015

## Highlights

- Kelowna area housing starts trended slightly higher in April.
- Actual levels of both single-detached and multiples starts increased over April 2014 levels.
- Inventories of new, completed and unoccupied homes remained near recent lows.

SAAR:<sup>1</sup> Seasonally adjusted annual rate

<sup>1</sup> Seasonally adjusted annual rates (SAAR) – Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

## April New Home Construction

Housing starts in the Kelowna Census Metropolitan Area (CMA) were trending at 1,482 units in April compared to 1,418 units in March according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts.

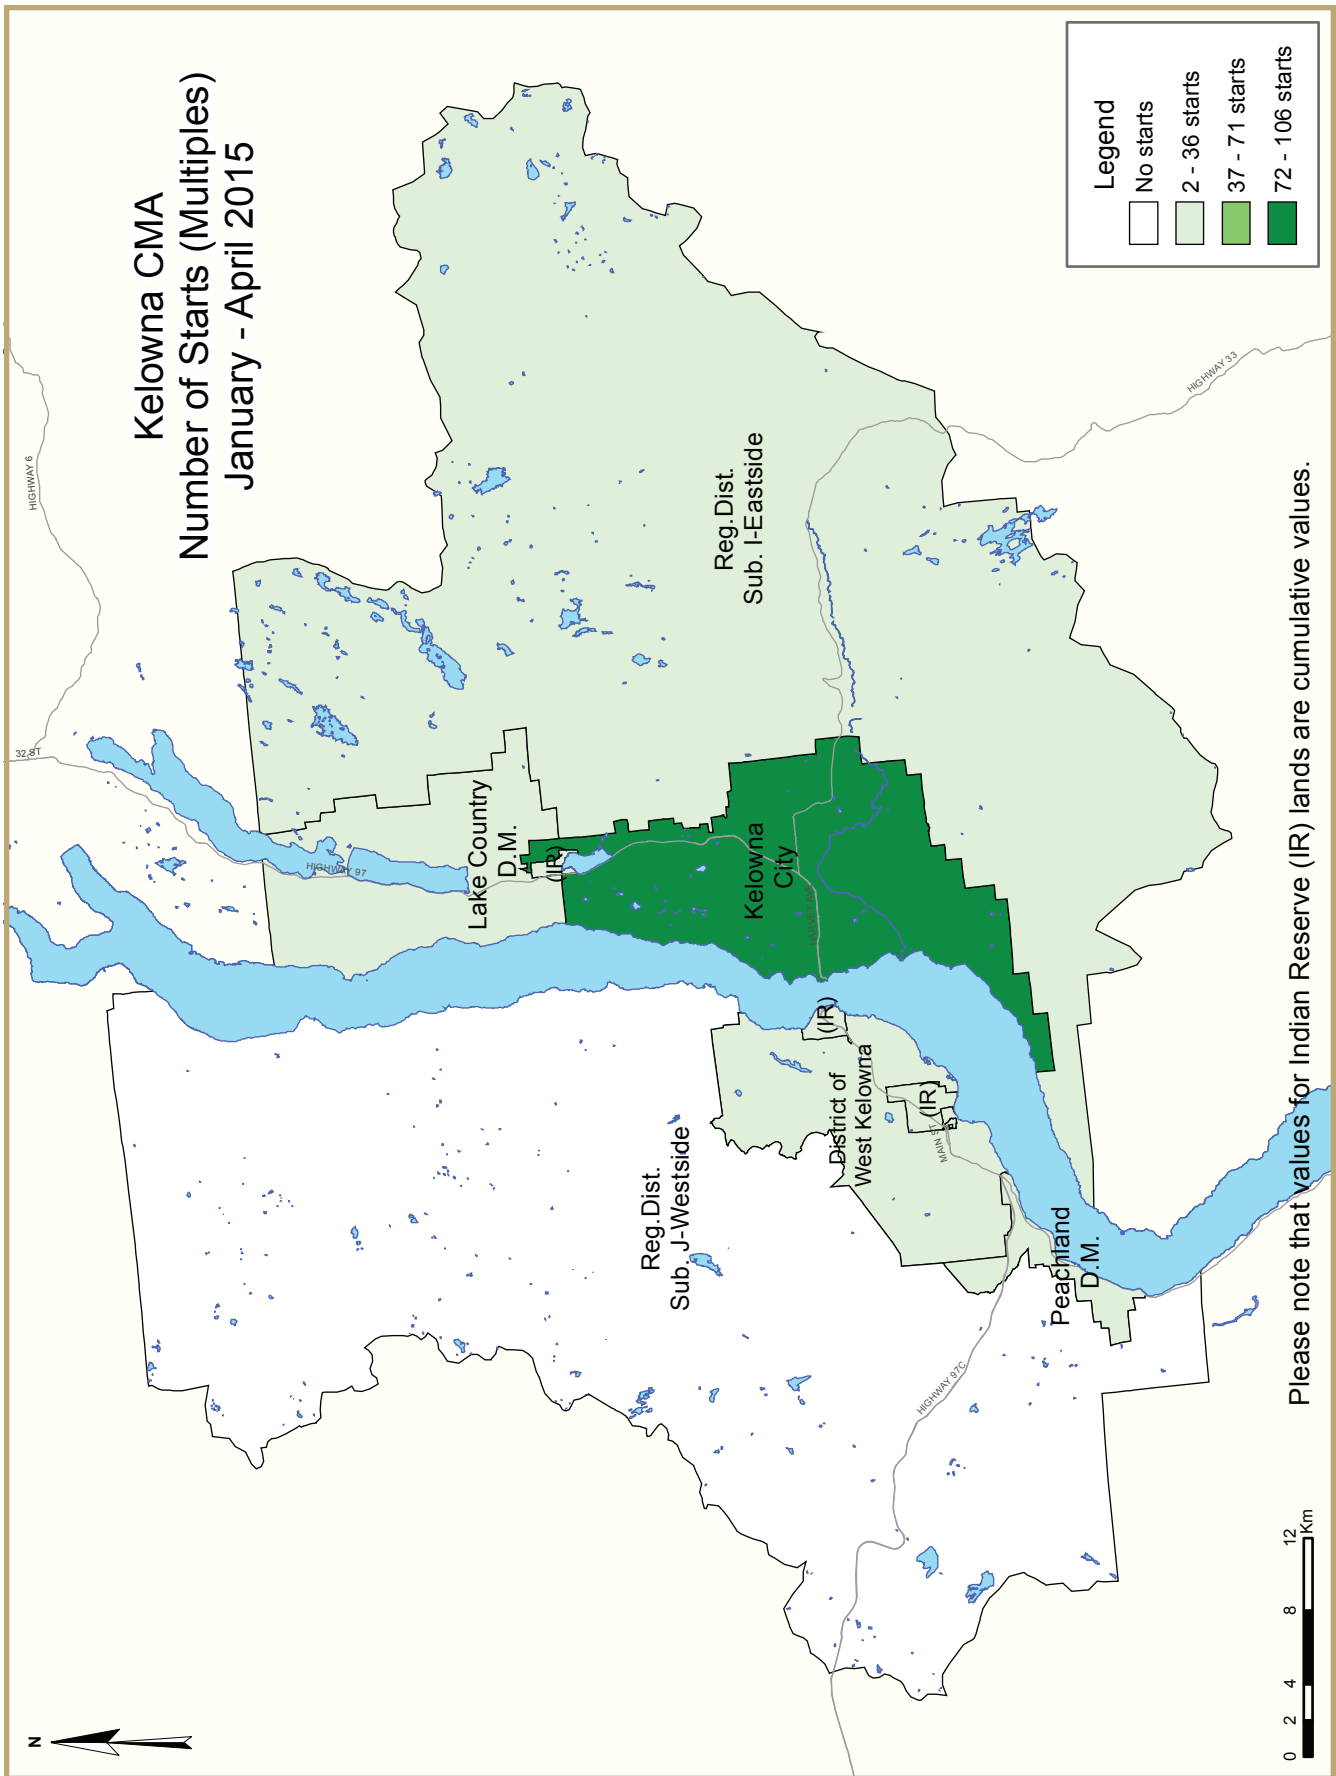

Actual housing starts in the Kelowna CMA amounted to 113 units in April 2015, compared to 79 units last year. Nearly identical numbers of single-family and multiple-family new homes broke ground last month, with survey results reporting 56 and 57 units respectively. Growth for the month was strongest for multiples starts, which were up 50 per cent when compared to April 2014 figures. Builders also poured foundations for more single-detached homes than they did a year ago.

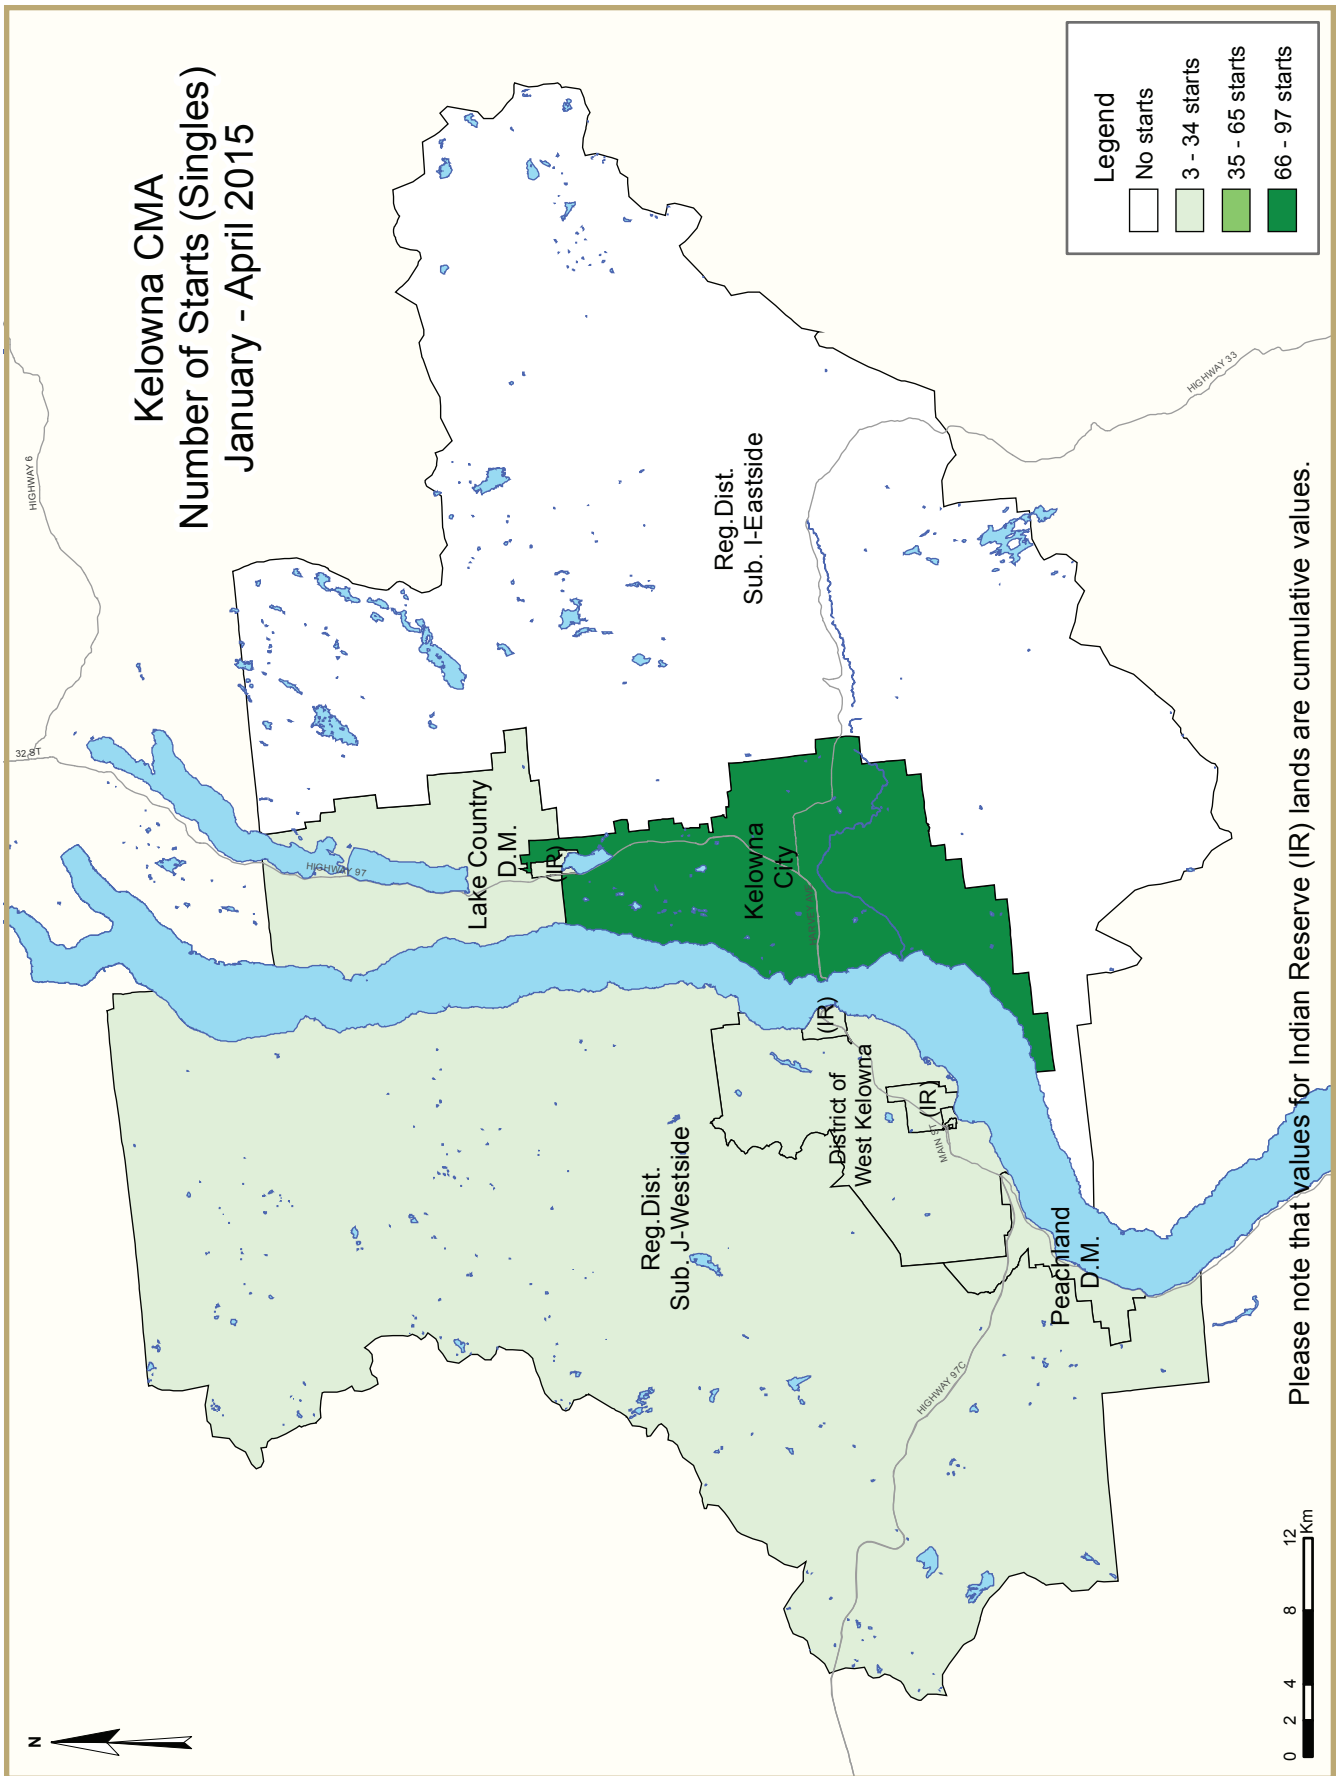

There have been 326 Kelowna area housing starts so far this year, compared to 288 starts over the same four month period last year. An expansion in multiple-family home construction contributed to this increase, consisting of 97 semi-detached and townhouses, 30 condominium apartments, and 25 rental apartments. Single-detached starts remained on par with year earlier figures: over the first four months of this year there were 174 single-detached starts, compared to 180 the same period a year ago.

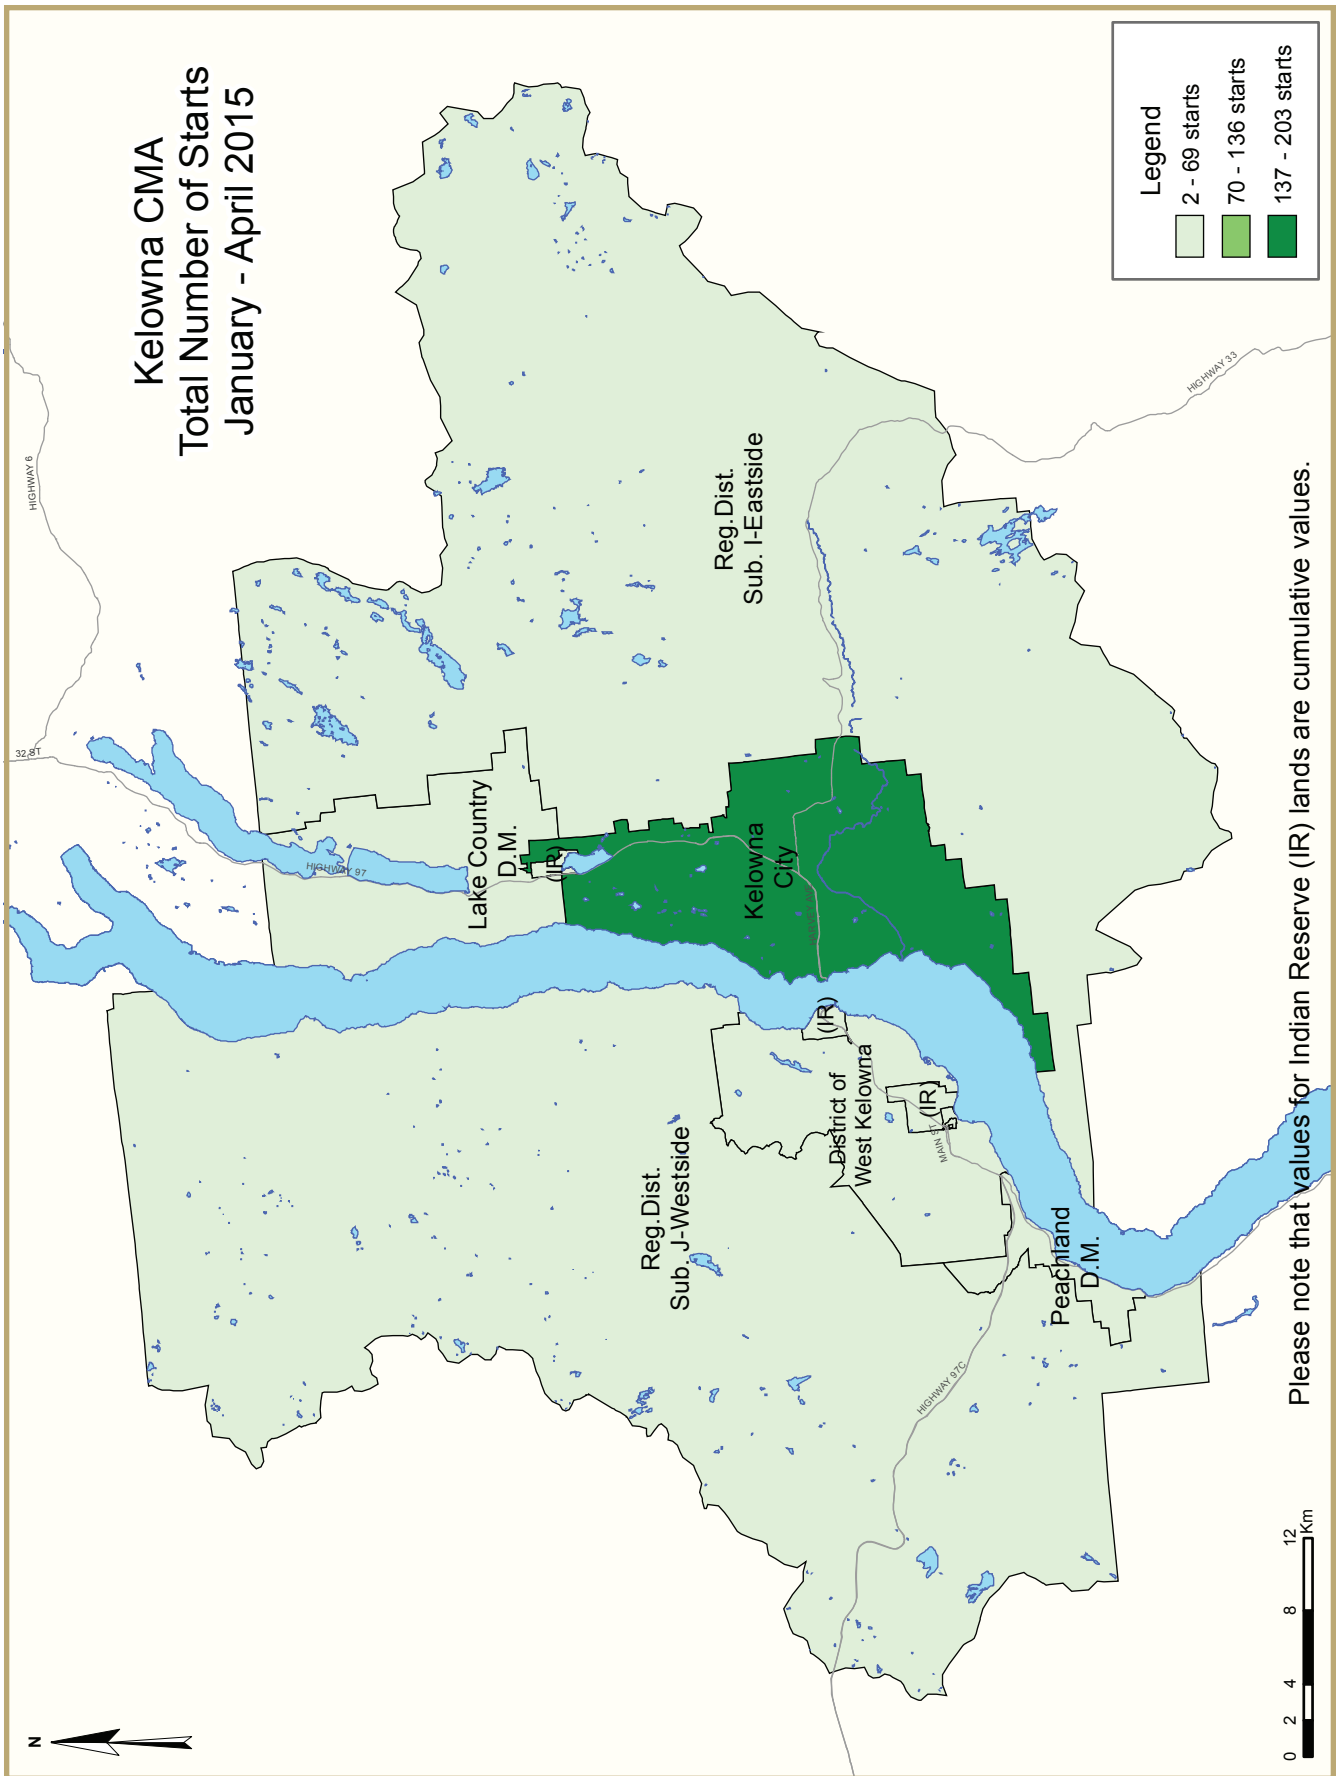

There were 1,222 new homes under construction in the Kelowna area as at April 2015, up from 992 units a year earlier. Nearly two-fifths these homes were single-detached homes, while apartment units made up more than one-third of all units under construction. The pick-up in new homes under construction reflects the higher levels of housing starts recorded over the past year.

Fewer new homes were absorbed (sold) in April 2015 than a year earlier. Last month there were 64 absorptions, compared to 70 in April 2014. Two-fifths of these absorbed units were single-detached homes, some of which carried a price tag in excess of \$1 million. The average price of a new single-detached home that was absorbed in April was \$526,828, whereas its median was \$511,000. Last year the respective median price was \$578,665.

The inventory of completed and unsold (unabsorbed) new homes remained near recent lows. At the end of April there were 120 unabsorbed homes, down from 162 units just twelve months earlier. Townhouse and apartment units showed the largest year-over-year change: there were 9 unabsorbed townhomes, down from 16 in April 2014, and 12 apartments, down from 48 last year.

## HOUSING NOW REPORT TABLES

### Available in ALL reports:

- 1 Housing Starts (SAAR and Trend)
- 1.1 Housing Activity Summary of CMA
- 2 Starts by Submarket and by Dwelling Type – Current Month or Quarter
- 2.1 Starts by Submarket and by Dwelling Type – Year-to-Date
- 3 Completions by Submarket and by Dwelling Type – Current Month or Quarter
- 3.1 Completions by Submarket and by Dwelling Type – Year-to-Date
- 4 Absorbed Single-Detached Units by Price Range
- 5 MLS® Residential Activity
- 6 Economic Indicators

### Available in SELECTED Reports:

- 1.3 History of Housing Activity (once a year)
- 2.2 Starts by Submarket, by Dwelling Type and by Intended Market – Current Month or Quarter
- 2.3 Starts by Submarket, by Dwelling Type and by Intended Market – Year-to-Date
- 2.4 Starts by Submarket and by Intended Market – Current Month or Quarter
- 2.5 Starts by Submarket and by Intended Market – Year-to-Date
- 3.2 Completions by Submarket, by Dwelling Type and by Intended Market – Current Month or Quarter
- 3.3 Completions by Submarket, by Dwelling Type and by Intended Market – Year-to-Date
- 3.4 Completions by Submarket and by Intended Market – Current Month or Quarter
- 3.5 Completions by Submarket and by Intended Market – Year-to-Date
- 4.1 Average Price (\$) of Absorbed Single-Detached Units

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
