

# HOUSING NOW

## Kelowna CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: June 2015

## Highlights

- The trend measure for total housing starts shifted lower in May.
- Actual levels of both single-detached and multiples starts decreased over May 2014 levels, however, year-to-date figures indicate stability in the overall number of starts.
- Inventories of new completed and unabsorbed units remain low, particularly multiple-family units.

SAAR:<sup>1</sup> Seasonally adjusted annual rate

<sup>1</sup> Seasonally adjusted annual rates (SAAR) – Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

## May New Home Construction

Housing starts in the Kelowna Census Metropolitan Area (CMA) were trending at 1,211 units in May compared to 1,471 units in April according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six-month moving average of the monthly seasonally-adjusted annual rates (SAAR) of housing starts.

Actual housing starts in the Kelowna CMA totalled 74 units in May 2015, compared to 116 units in May of last year. Survey results for May 2015 show that starts for new single-family and multiple-family homes were lower than those from the previous year. Single-family home starts totalled 49 units in May 2015 compared to 70 units last year. Multiple-family starts amounted to 25 units in May 2015 while there were 46 starts over the same period in 2014.

Overall, starts in the Kelowna CMA remain stable with a shift in focus toward the multiple-family housing type. So far this year there have been 400 Kelowna area housing starts, compared to 404 starts over the same five month period last year. The overall number of multiple-family starts increased to 177 units between January and May 2015 from 154 over the same period last year. Multiple-family starts consist of 113 semi-detached and townhouses and 64 apartments and secondary suites. Meanwhile, starts for single-family homes declined to 223 units between January and May 2015 as compared to 250 units in the previous year.

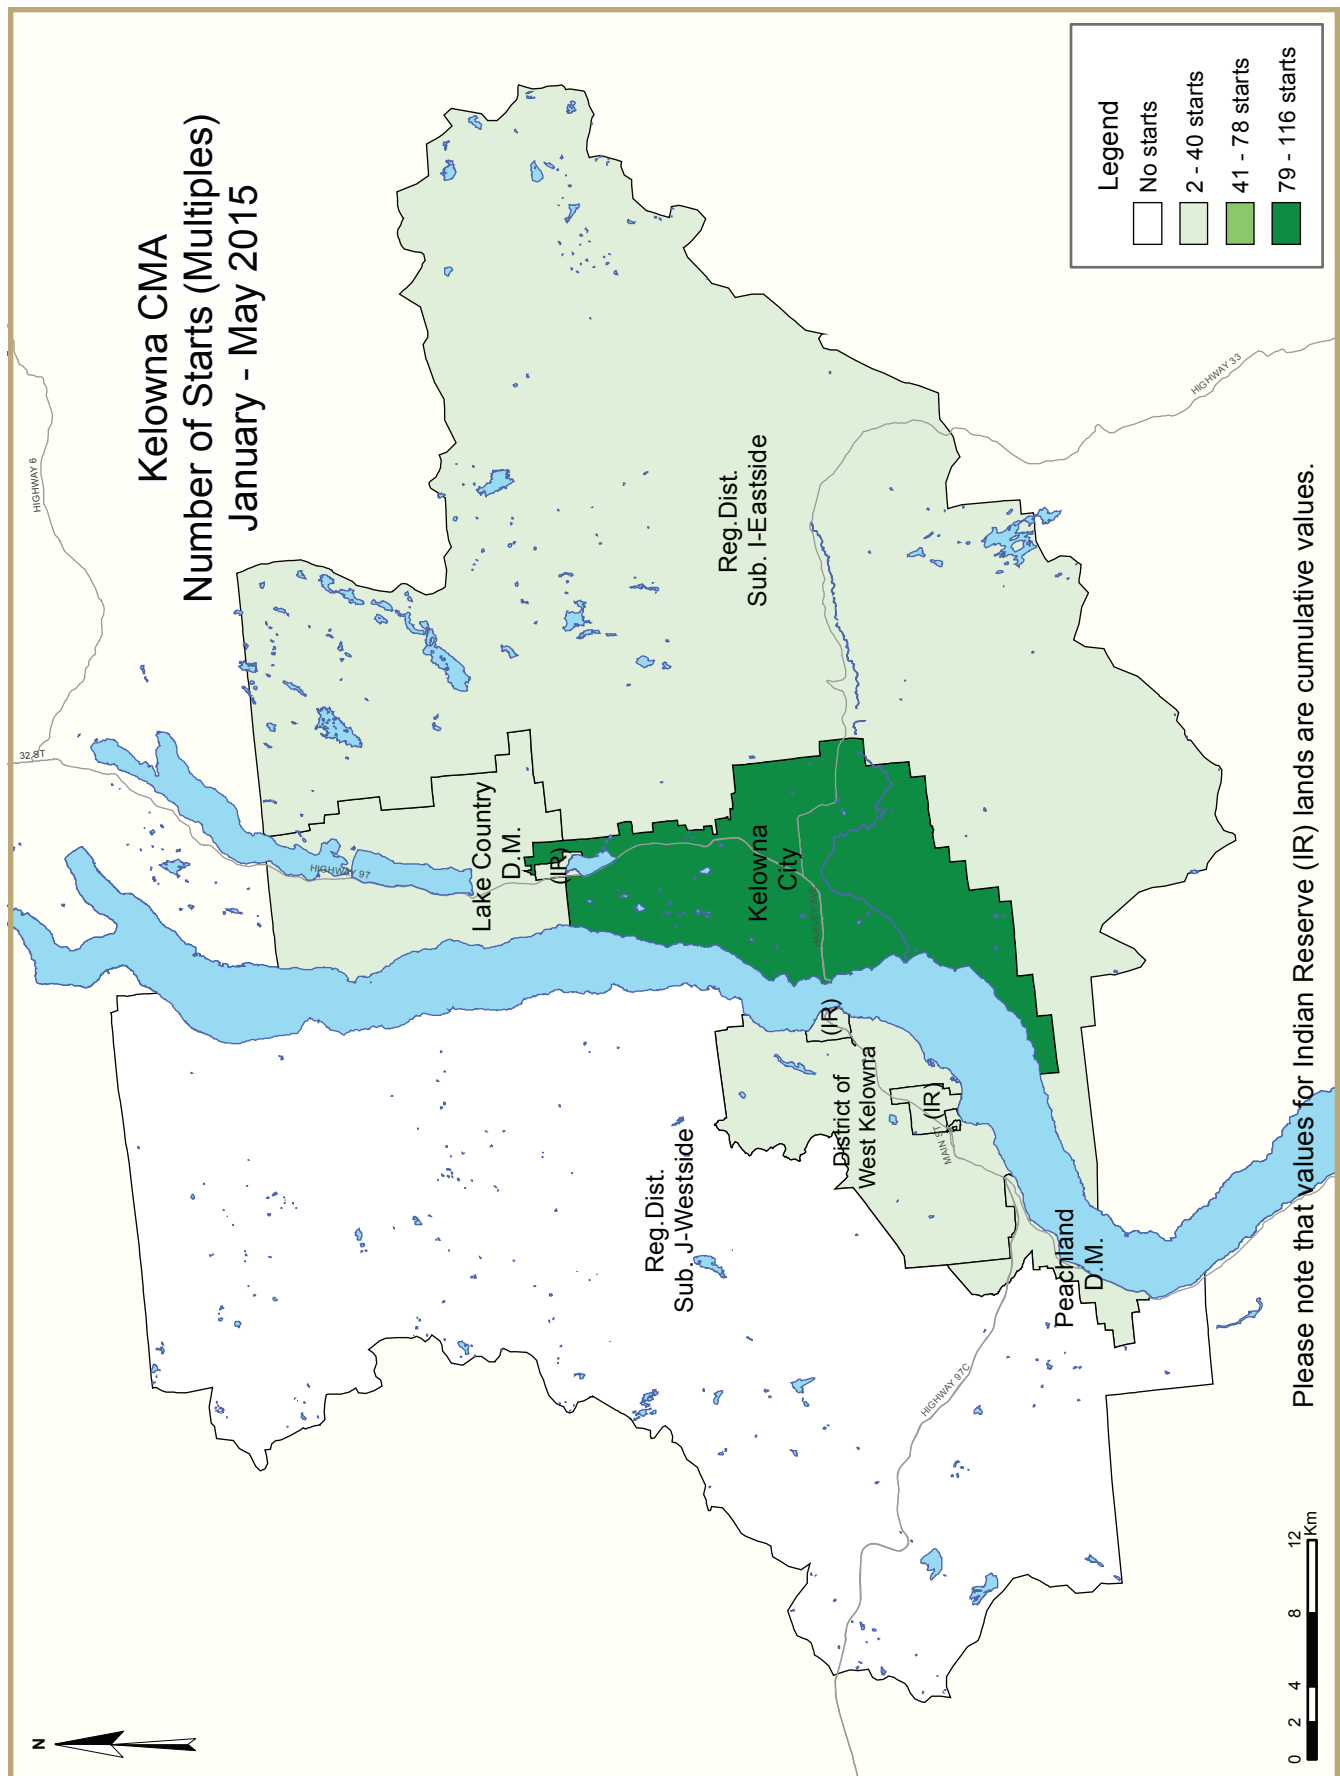

New homes under construction in the Kelowna CMA totalled 1,165 in May 2015, compared to 1,029 in the same month last year. Nearly 38 per cent of these homes were single-

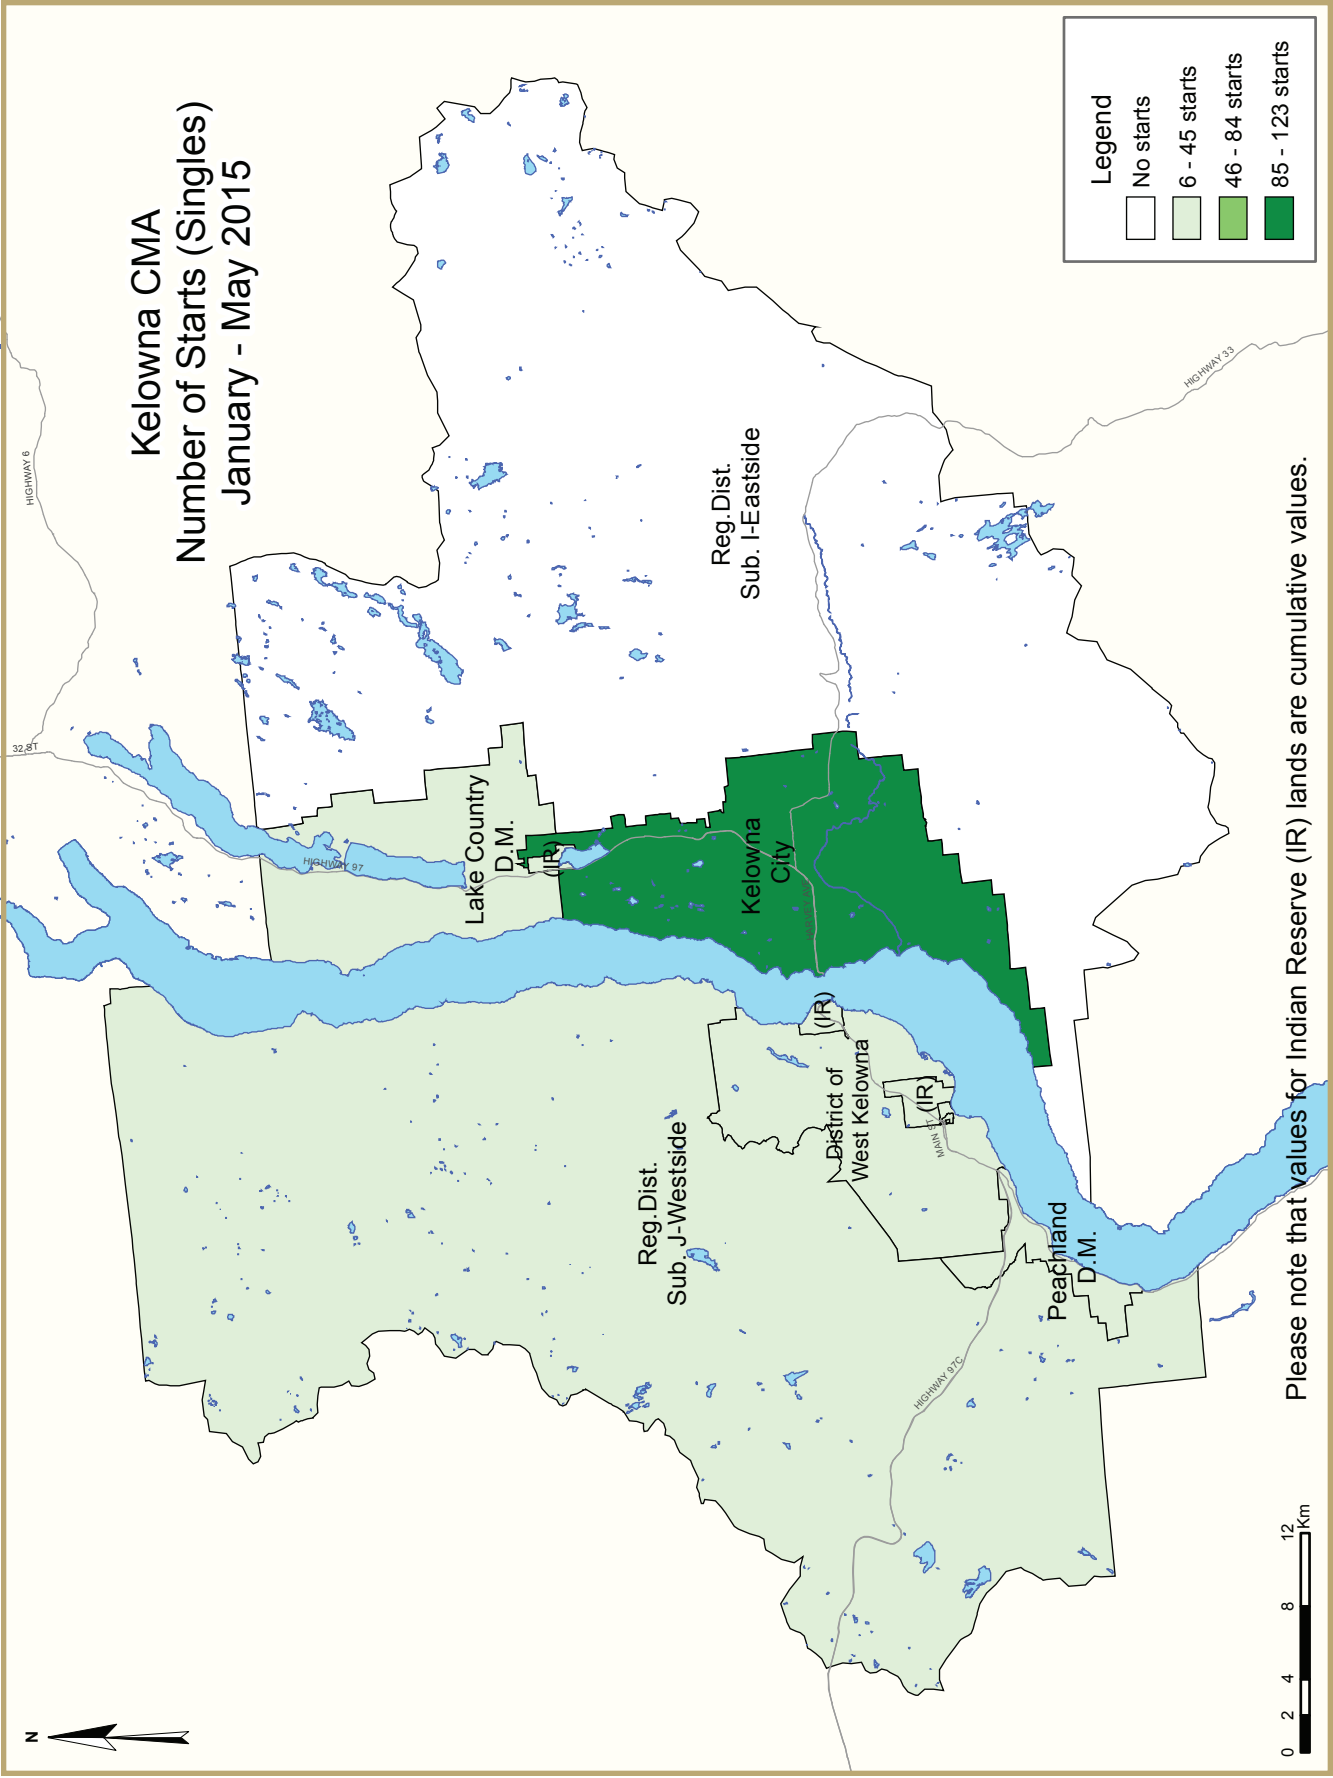

detached homes while apartment and secondary suite units, both rental and ownership, made up another approximately 36 per cent of activity. The level of under construction activity in the Kelowna CMA can be attributed to the increase in multiple-family development thus far in 2015. For instance, the number of single-detached units under construction grew by approximately eight percent in May 2015 compared to 2014 while the number of condominium apartments and secondary suites under construction grew by approximately 69 percent from last year. Multiple-family projects generally take longer to build than single-detached homes, thereby adding to the number of under construction units.

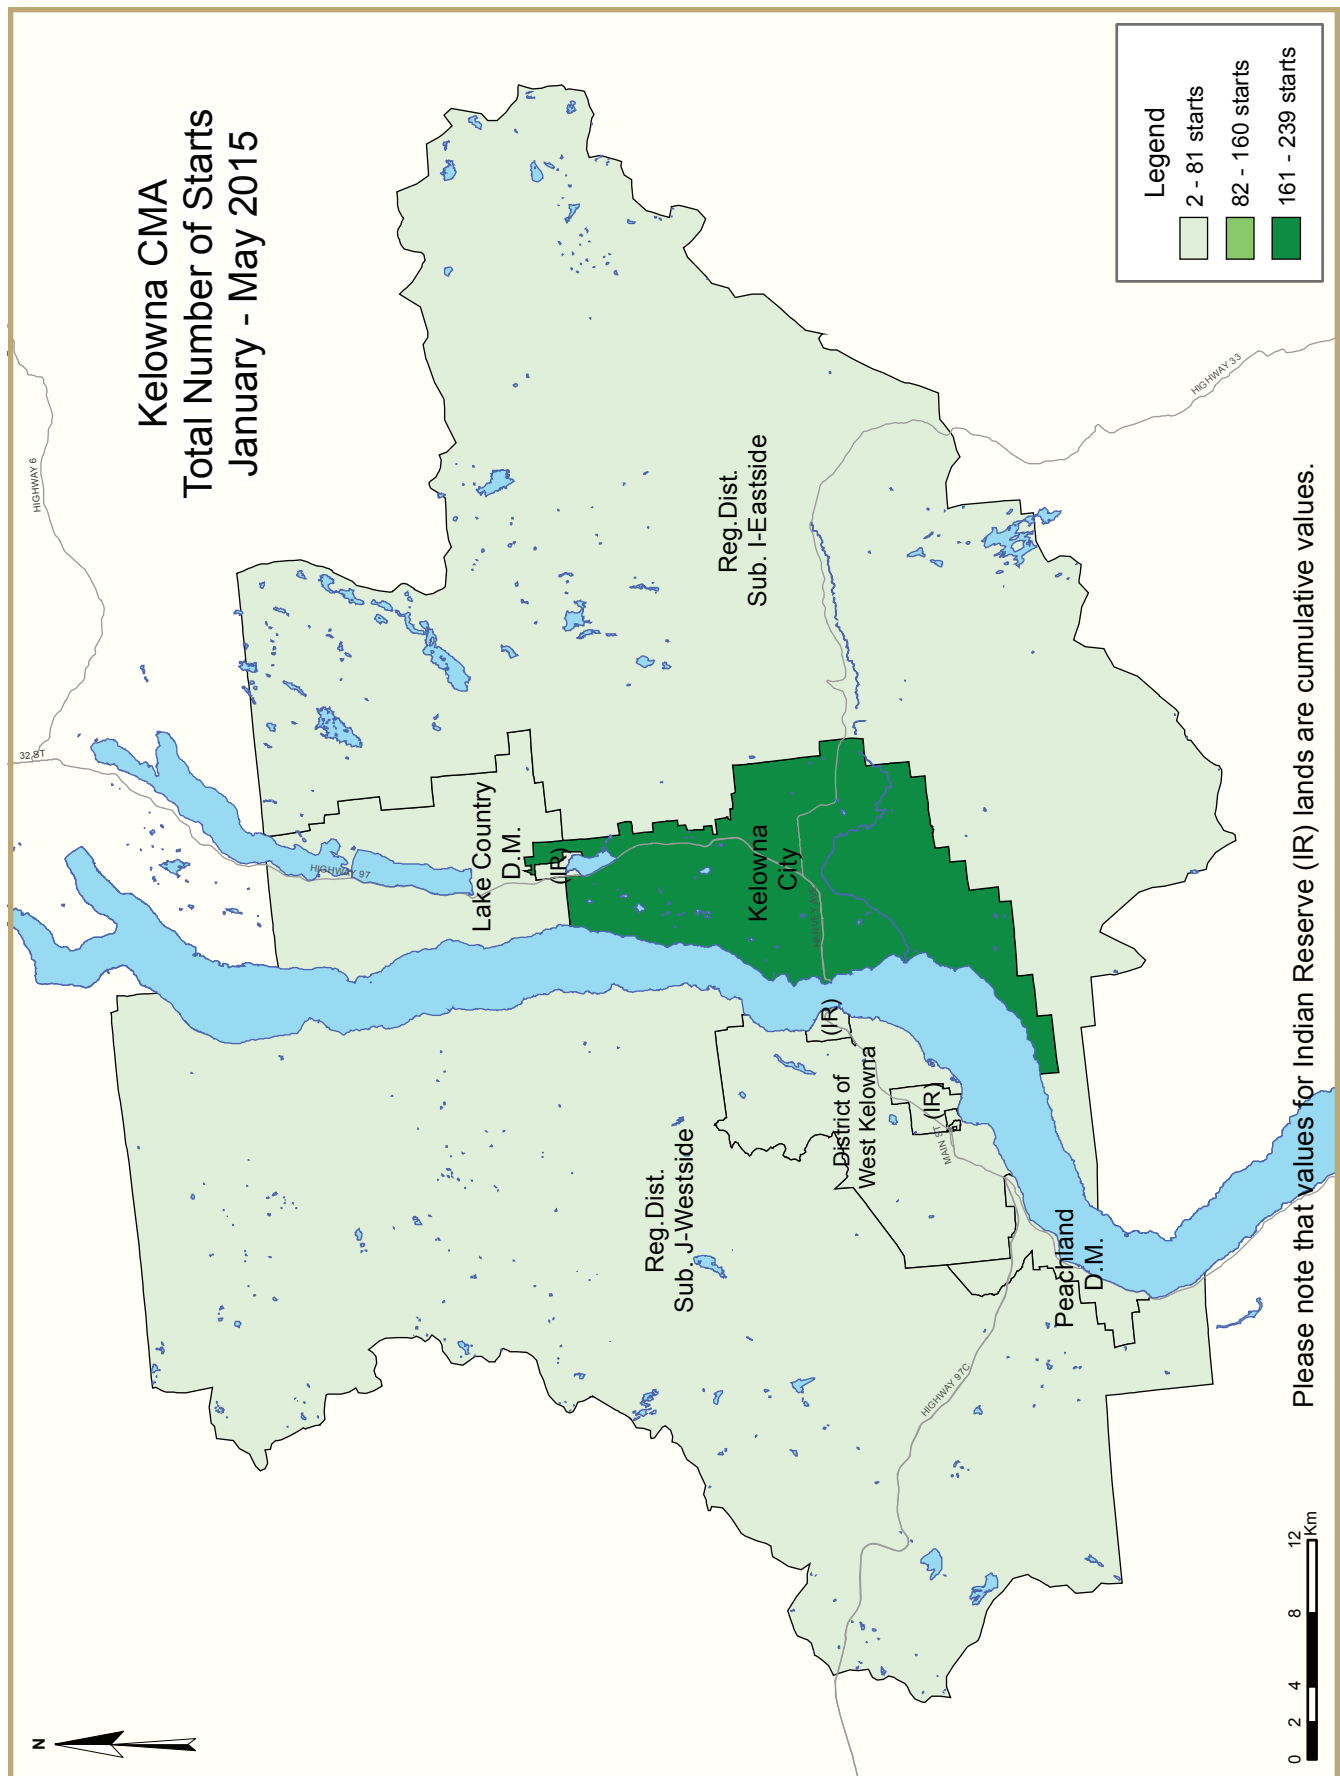

The number of new homes absorbed (sold) in May 2015 was higher compared to the same month in the previous year. There were a total of 90 absorptions in May 2015 compared to 82 in May 2014. Over 75 percent of all absorptions in the Kelowna CMA were single-detached homes in the month of May. The average price of a single-detached home absorbed in May was \$631,793 while the median price was \$600,000. The average price of an absorbed unit was skewed upward in May due to approximately fifty-seven percent of all homes sold being above \$600,000. For comparison, the average price of homes absorbed in May 2014 was \$566,634 and the median came in at \$512,820.

The number of completed and unsold (absorbed) new homes in the Kelowna CMA remains relatively low overall. Closing out the month of May there was a total of 145 unabsorbed new homes, down from 151 unabsorbed units in May 2014. The inventory of unabsorbed single-detached

homes was significantly higher in May 2015 at 93 units compared to 66 in the previous year. The number of unabsorbed multiple-family units declined with townhouses showing 32 units on the market in May, down from 48 in May 2014. Apartments also declined showing 12 units on the market at the end of May, down from 37 in the same month of the previous year.

## HOUSING NOW REPORT TABLES

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
