HOUSING MARKET INFORMATION

HOUSING NOW Vancouver and Abbotsford CMAs

Date Released: September 2015

Highlights

- Total housing starts in the Vancouver CMA moved back towards the 20-year average in August;
- Housing starts in Abbotsford-Mission were trending lower in August compared to July, although year-to-date starts are still above last year's total.
 Inventory of completed homes has fallen alongside generally strong markets.

All starts figures in this release, other than actual starts and the trend estimate, are seasonally adjusted annual rates (SAAR) — that is, monthly figures adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Housing starts in the Vancouver Census Metropolitan Area (CMA) trended at 22,421 units in August compared to 21,860 units in July. The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR)1 of housing starts. After a couple months of high construction activity, actual housing starts for August moved back closer to its 20-year average for the month of August.² Actual housing starts in August was 1,462, lower than the 2,291 recorded during the same month last year.

Total year-to-date housing starts in the CMA is above last year's totals of the same time period at 13,717 compared to 13,004. A pick-up in demand has led to an increase of 10 per cent in single-detached housing starts over last year. Part of the increase can be attributed to laneway homes in the City of Vancouver, a popular type of housing for its flexibility as a mortgage helper or providing space for additional family members.3 Conversely, total row

(townhomes) have recorded a decline in year-over-year starts. Rising land costs have deterred townhome development in centres closer to the Vancouver downtown core, such as Burnaby and North Vancouver District, while centres away from the downtown core have seen totals that have been close or surpassed the previous year.

With a pick-up in starts during the latter half of 2014, completions in 2015 have outpaced 2014 year-todate totals. Developers have been quick to complete single-detached homes as the percentage of units that have been absorbed at completion has increased from 55 per cent last year to 65 per cent. For apartment condominiums, absorbed at completions, which is one indicator of pre-sale activity, has also increased from 74 per cent to 83 per cent in the same time period.

The number of new units for immediate move-in (completed and unabsorbed) moved lower in August at 2,279, compared to 2,355 in July. August figures were also one-third

below August 2014 totals. All dwelling types recorded lower figures from the previous month, indicating that demand for new homes is still strong. The life of inventory, which is how long it takes completed units to be absorbed, was 5.3 months, a decline from 7.9 months calculated in August 2014.

Housing starts in the Abbotsford-Mission CMA were trending at 578 units (6-month average SAAR) in August, compared to 655 units in July. Year-to-date housing starts are up 18% over last year's totals at 424 homes. Abbotsford City has accounted for the increase in total housing starts, while the District of Mission has recorded a decline of 15 per cent during the same time period. Part of the increase in Abbotsford housing starts can be related to the decline in the number of completed and unabsorbed ground-oriented style homes in the region. The number of these homes for immediate move-in is 26 per cent lower compared to the number recorded in August 2014.

² The 20-year average for the month of August is 1,466 housing starts.

³ CMHC'S Starts and Completions Survey records laneway homes as a rental, single-detached structures.

HOUSING NOW REPORT TABLES

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
