

HOUSING NOW

Victoria CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: July 2015

Highlights

- In the first half of 2015, housing starts in the Victoria CMA were 65 per cent higher than in the same period in 2014.
- Driven by the apartment condominium segment, new home sales have increased 19 per cent so far this year.
- In the second quarter of this year, MLS® home sales were up 30 per cent over 2014 levels.

Figure 1

*SAAR¹: Seasonally adjusted annual rate

Source: CMHC.

¹ The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Victoria CMA New Housing Market

Housing starts in the Victoria Census Metropolitan Area (CMA) were trending at 1,997 units in June, compared with 1,924 units in May, according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR)¹ of housing starts.

Actual housing starts declined to 139 units in June 2015 from 197 starts in June 2014 due to lower multiple-family housing starts during the month. In total, there were 63 single-detached and 76 multiple-family housing starts in June 2015. Thirty-five per cent of all starts took place in Langford, with another 19 per cent in Sidney, 14 per cent in Saanich, and the remainder split among the other municipalities in the Victoria CMA.

During the first half of 2015, there were 984 housing starts in the Victoria CMA, an increase of 65 per cent over the 596 total starts in the same period in 2014. Total multiple-family housing starts so far this year were double the level recorded in the same period in 2014. Higher rental apartment construction contributed

Figure 2

Source: CMHC.

to the increase, with 319 units getting underway so far in 2015. The number of single-detached starts moved higher as well, with 303 starts so far in 2015 compared with 115 starts in the same period a year earlier.

Higher net migration and low mortgage interest rates are supporting the demand for new homes in the Victoria CMA. While new home sales (absorptions) declined in June 2015 compared with the same month in 2014, absorptions were up 19 per cent so far this year. In

the apartment condominium segment, higher sales levels have exceeded completions over the past twelve months, reducing the inventory of completed and unabsorbed (unsold) condominium apartment units to 216 units in June 2015 from 382 units in June 2014. For single-detached homes, completions have closely matched absorptions, increasing the unabsorbed inventory slightly to 75 units in June 2015 from 73 units twelve months earlier.

Victoria CMA Resale Housing Market

The Victoria resale housing market recorded higher sales and prices compared to last year. In both the second quarter and the first half of 2015, Victoria area MLS® home sales increased 30 per cent compared with the same time periods in 2014. The level of second quarter sales activity now exceeds the 15-year average for the first time since Q2 2009 (Figure 3). Single-detached, townhouse and apartment condominium units all recorded increased resale activity.

Higher resale home prices were supported by a decline in the number of homes available for sale and an increase in the number of residential sales. In Q2 2015, the average MLS® price rose 3.9 per cent over the average price in the same period a year earlier. The largest price gains were recorded in the apartment condominium segment, where prices were up 5.7 per cent over the average in Q2 2014. The average price for an apartment condominium was \$332,291. Single-detached homes also recorded growth in average MLS® prices, increasing 4.4 per cent to \$598,387, while the average selling price for townhouses edged up 0.3 per cent in Q2 this year to \$405,784.

Figure 3

Source: CMHC adapted from CREA.

The MLS® Housing Price Index (HPI) composite for the Victoria Real Estate Board area was 146.6 for June 2015, compared to 140.5 one year earlier, a 4.3 per cent increase. This measure uses the concept of a benchmark home (inclusive of all single-detached, townhouses, and apartment condominiums) to provide a measure of price movement that is not influenced by the composition of home sales or the varying features of the home being sold. The benchmark represents a home with common attributes of typical homes in the Victoria area.

SPOTLIGHT: Spring Rental Market Survey shows tightening market in the Victoria CMA

In the Victoria CMA, the results of CMHC's April 2015 Rental Market Survey suggest that the supply of rental accommodation has not kept pace with rising demand. At 1.2 per cent, the apartment vacancy rate was down from 2.7 per cent last spring despite an increase in new rental completions during the last two years. The lower vacancy rate reflects strong rental demand across the range of bedroom types.

The average apartment rent for all bedroom types in the Victoria CMA was \$918 in April 2015. Average rents ranged from \$716 for bachelor units to \$1,369 for apartments with three or more bedrooms. One-bedroom units, which comprise more than half of the rental apartment universe, had an average rent of \$856, while two-bedroom units rented for \$1,105 on average.

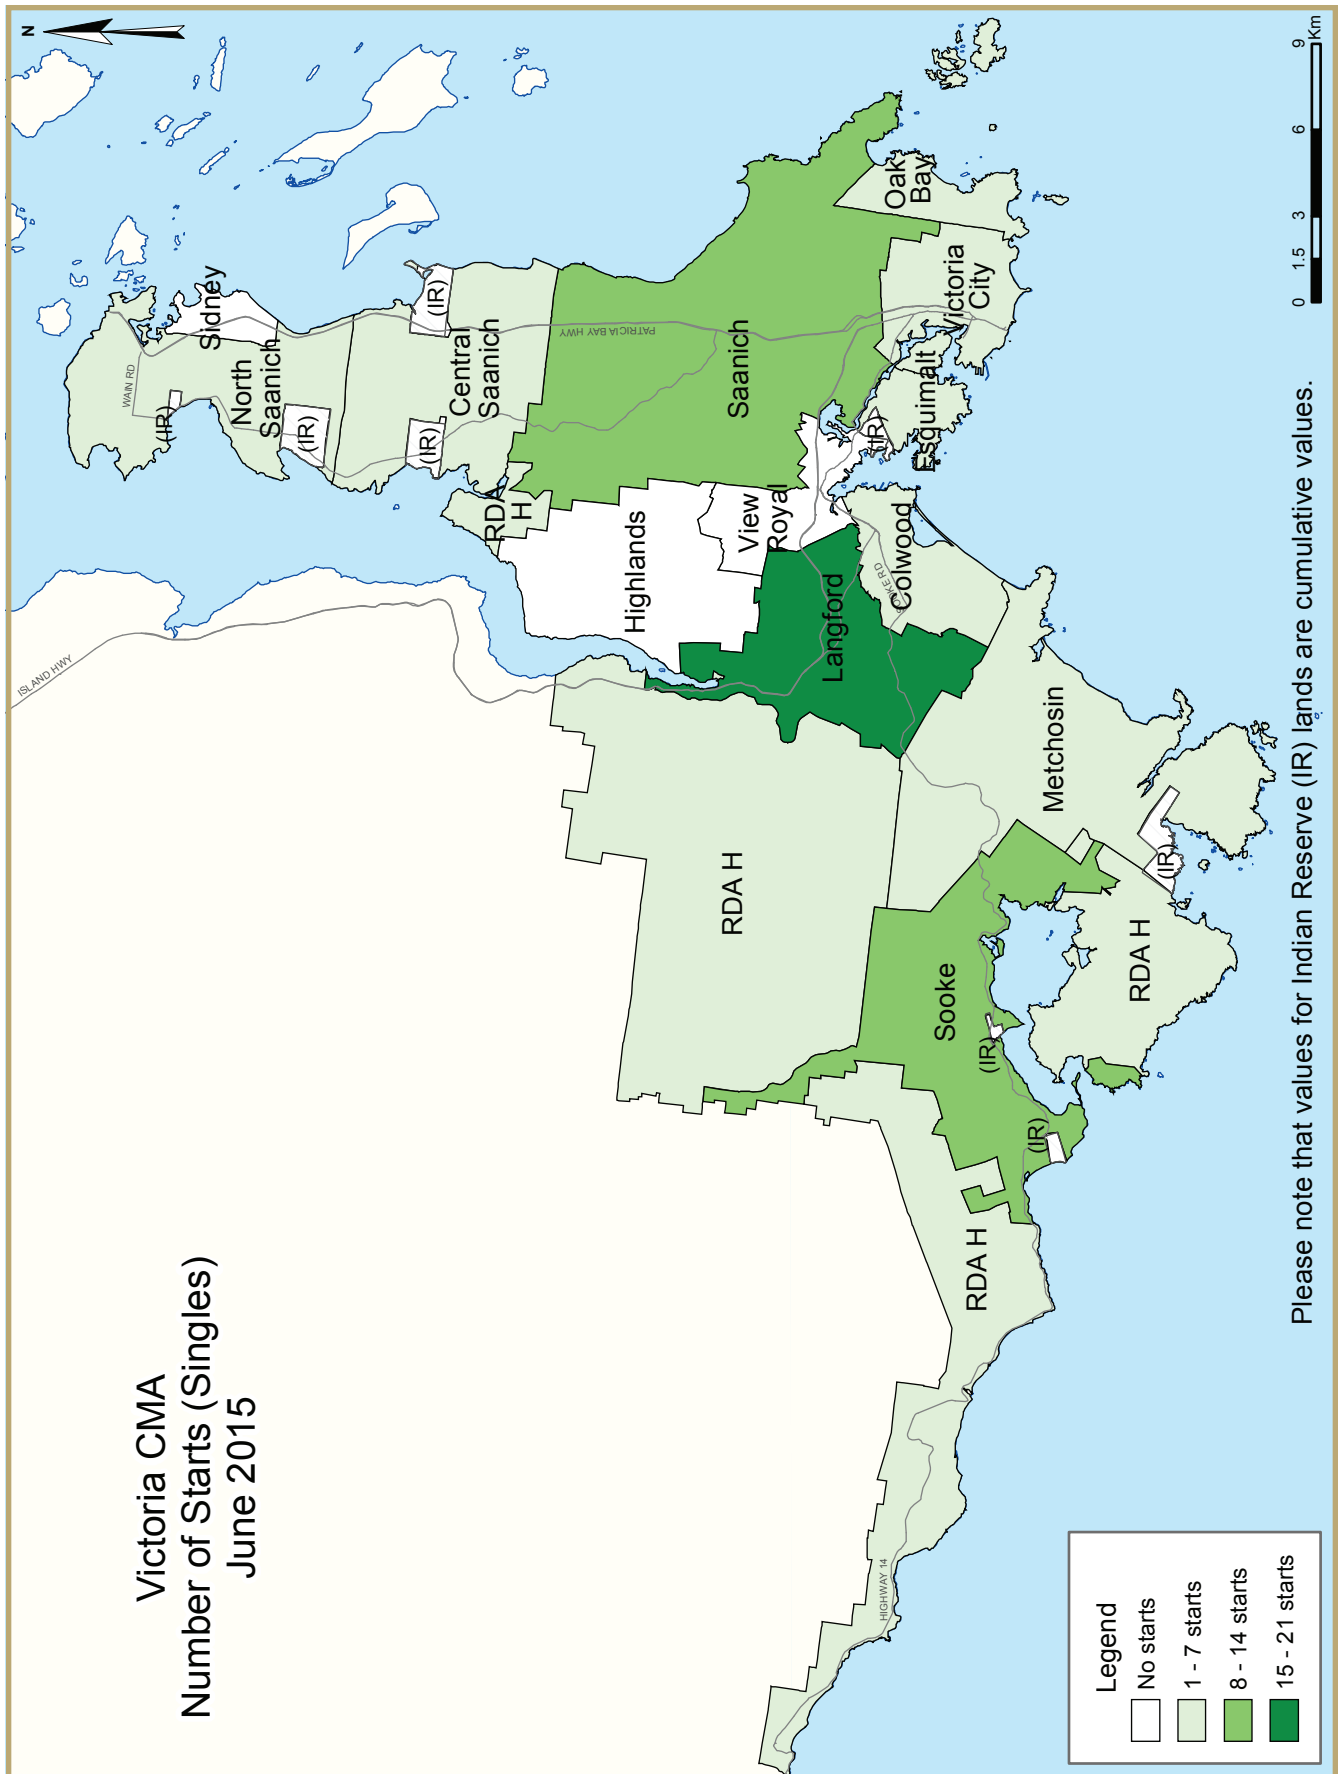

Looking deeper at the vacancy rate by rent range (Figure 4), the Victoria CMA rental market appears to be tightest at the low and high ends of the rent distribution. Apartments renting for less than \$750 per month had a vacancy rate of 0.7 per cent, well below the 1.2 per cent reported for all rent ranges. Vacancy rates were even lower for larger units in this rent range, underlining the challenges facing households looking for more affordable units, particularly given the small number of units in this segment of the rental universe. At the higher end of the rent distribution, units renting for over \$1,500 per month, which tend to be in newer buildings, had a vacancy rate of 0.9 per cent. Across all rent ranges, there were no vacancies recorded for units with three or more bedrooms in April 2015, reflecting strong demand for these larger units that represent only 2 per cent of the overall rental apartment universe in the Victoria CMA.

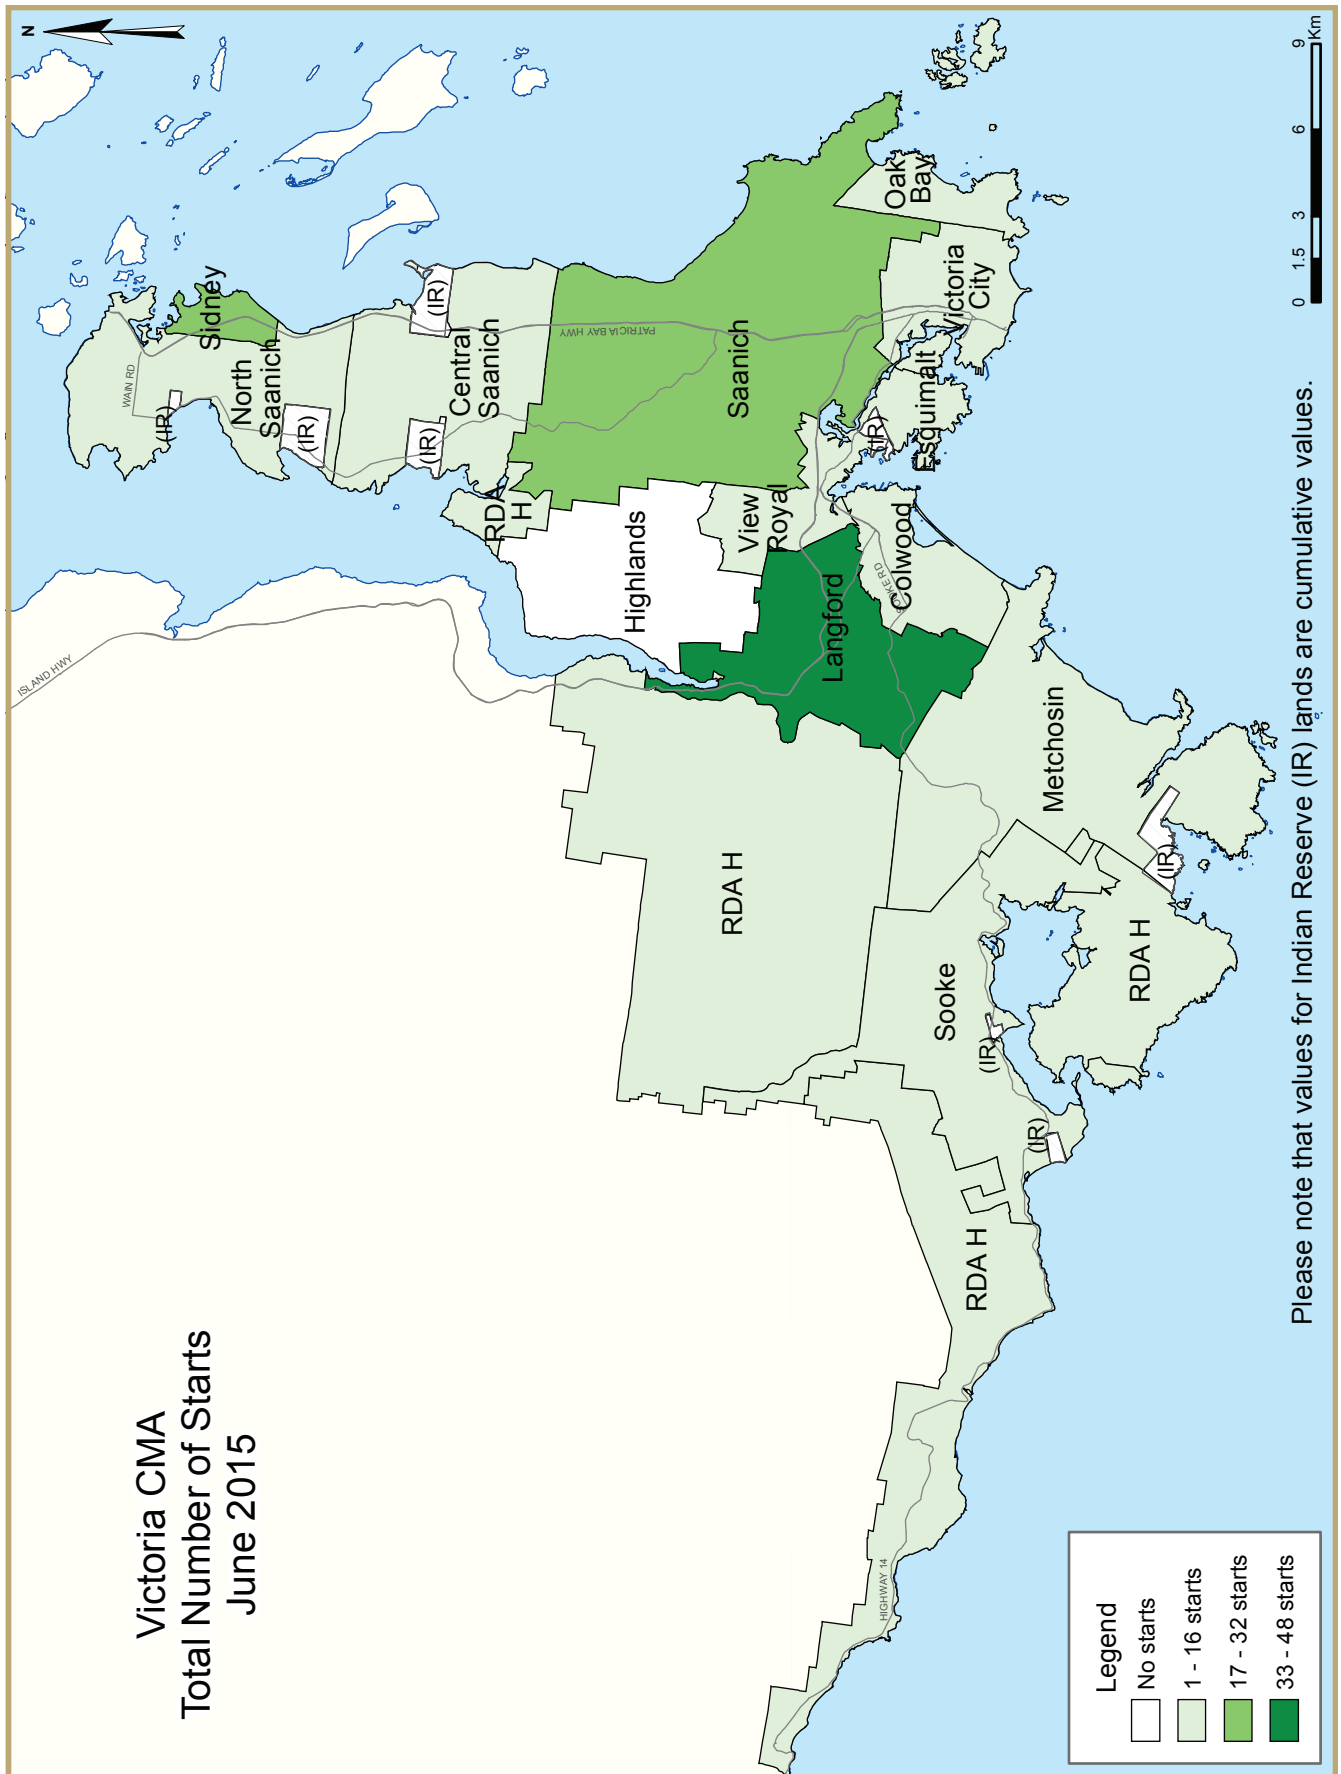

Figure 4

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
