

HOUSING NOW

Hamilton and Brantford CMAs

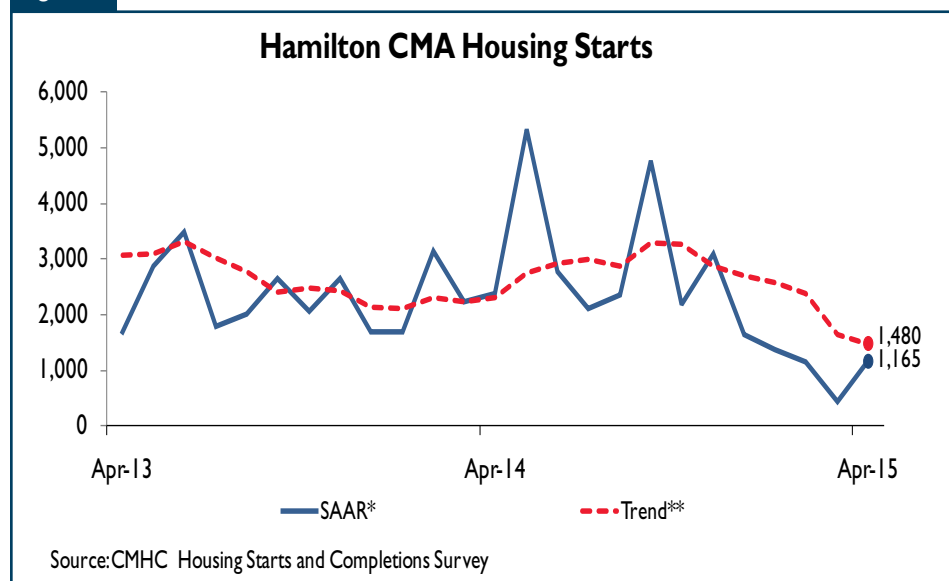

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: May 2015

Highlights

- The trend in Hamilton CMA total housing starts was down.
- Fewer multi-unit housing starts mainly due to a rising number of unsold homes.
- Brantford CMA total housing starts trend was up.

Figure 1

*SAAR¹: Seasonally Adjusted Annual Rate.

**Trend: Six-month moving average of the SAAR

¹ The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Hamilton CMA Total Housing Starts Trending Down

Housing starts in the Hamilton Census Metropolitan Area (CMA) were trending down at 1,480 units in April compared to 1,649 units in March. The trend is a six month moving average of the monthly seasonally adjusted annual rate (SAAR) of housing starts. This month's decline in the trend measure of housing starts was mainly due to a rising number of completed and unsold townhouses. Some builders scaled back activity in reaction to a high inventory level. However, warmer temperatures and a pickup in demand during the busy spring season will help absorb the current inventory. Home ownership affordability remained favourable, as the area continued to attract buyers from the Greater Toronto Area (GTA) where home prices continue to trend higher. As of April 2015, the average home price gap between Toronto and Hamilton was wide enough to encourage some buyers to move to Hamilton, particularly first-time buyers who are typically price sensitive.

The standalone monthly SAAR of housing starts was 1,165 units in April, up from 452 units in March, following four consecutive monthly declines. This month's increase in the SAAR measure of housing starts was mostly due to a rebound in single-detached housing starts in the City of Hamilton.

Existing home sales increased by seven per cent in April compared to March, on a seasonally adjusted basis. The number of sales grew faster than the number of new listings in April, pushing up the sales-to-new-listings ratio to 76 per cent from 71 per cent in March. The April increase in existing home sales was more prevalent in the

lower price ranges; an indication there was more first-time buyer demand. Consequently, the average existing home price was down marginally in April compared to March, on a seasonally adjusted basis. On a year-over-year basis however, the average existing home price was up eight per cent in April 2015 compared to the same month a year earlier.

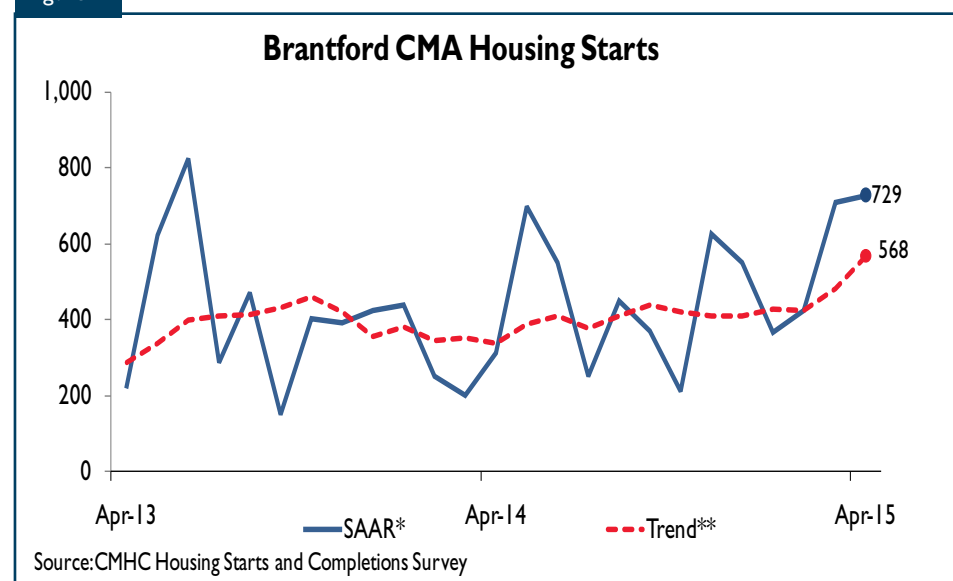

According to Statistics Canada labour force survey data, employment in Hamilton was up 0.6 per cent in April compared to March, on a seasonally adjusted basis. The unemployment rate declined to 5.2 per cent, the lowest since August 2008. Strong employment growth will continue to support home sales.

Brantford CMA Total Housing Starts Trending Up

Housing starts in the Brantford Census Metropolitan Area (CMA) were trending up at 568 units in April compared to 482 units in March. This

month's increase in the trend measure of total housing starts reflected a high number of single-detached housing starts and a rebound in townhouse construction. Move-up buyers from more expensive neighbouring municipalities continued to support single-detached housing demand in Brantford. Meanwhile, strengthening employment among the 25 to 44 age group supported the demand for townhouses. More specifically, employment among the 25 to 44 age group has been trending higher since September 2014, on a year-over-year basis. This age group has a higher concentration of first-time buyers, who tend to be more price-sensitive than other buyers. New townhouses are generally more affordable than new single-detached dwellings. The standalone monthly SAAR was 729 units in April, up from 710 units in March. Similar to the trend measure, the April increase in the SAAR measure of housing starts reflected continued strength in single-detached housing construction and a rebound in townhouse starts.

Figure 2

* SAAR¹: Seasonally Adjusted Annual Rate.

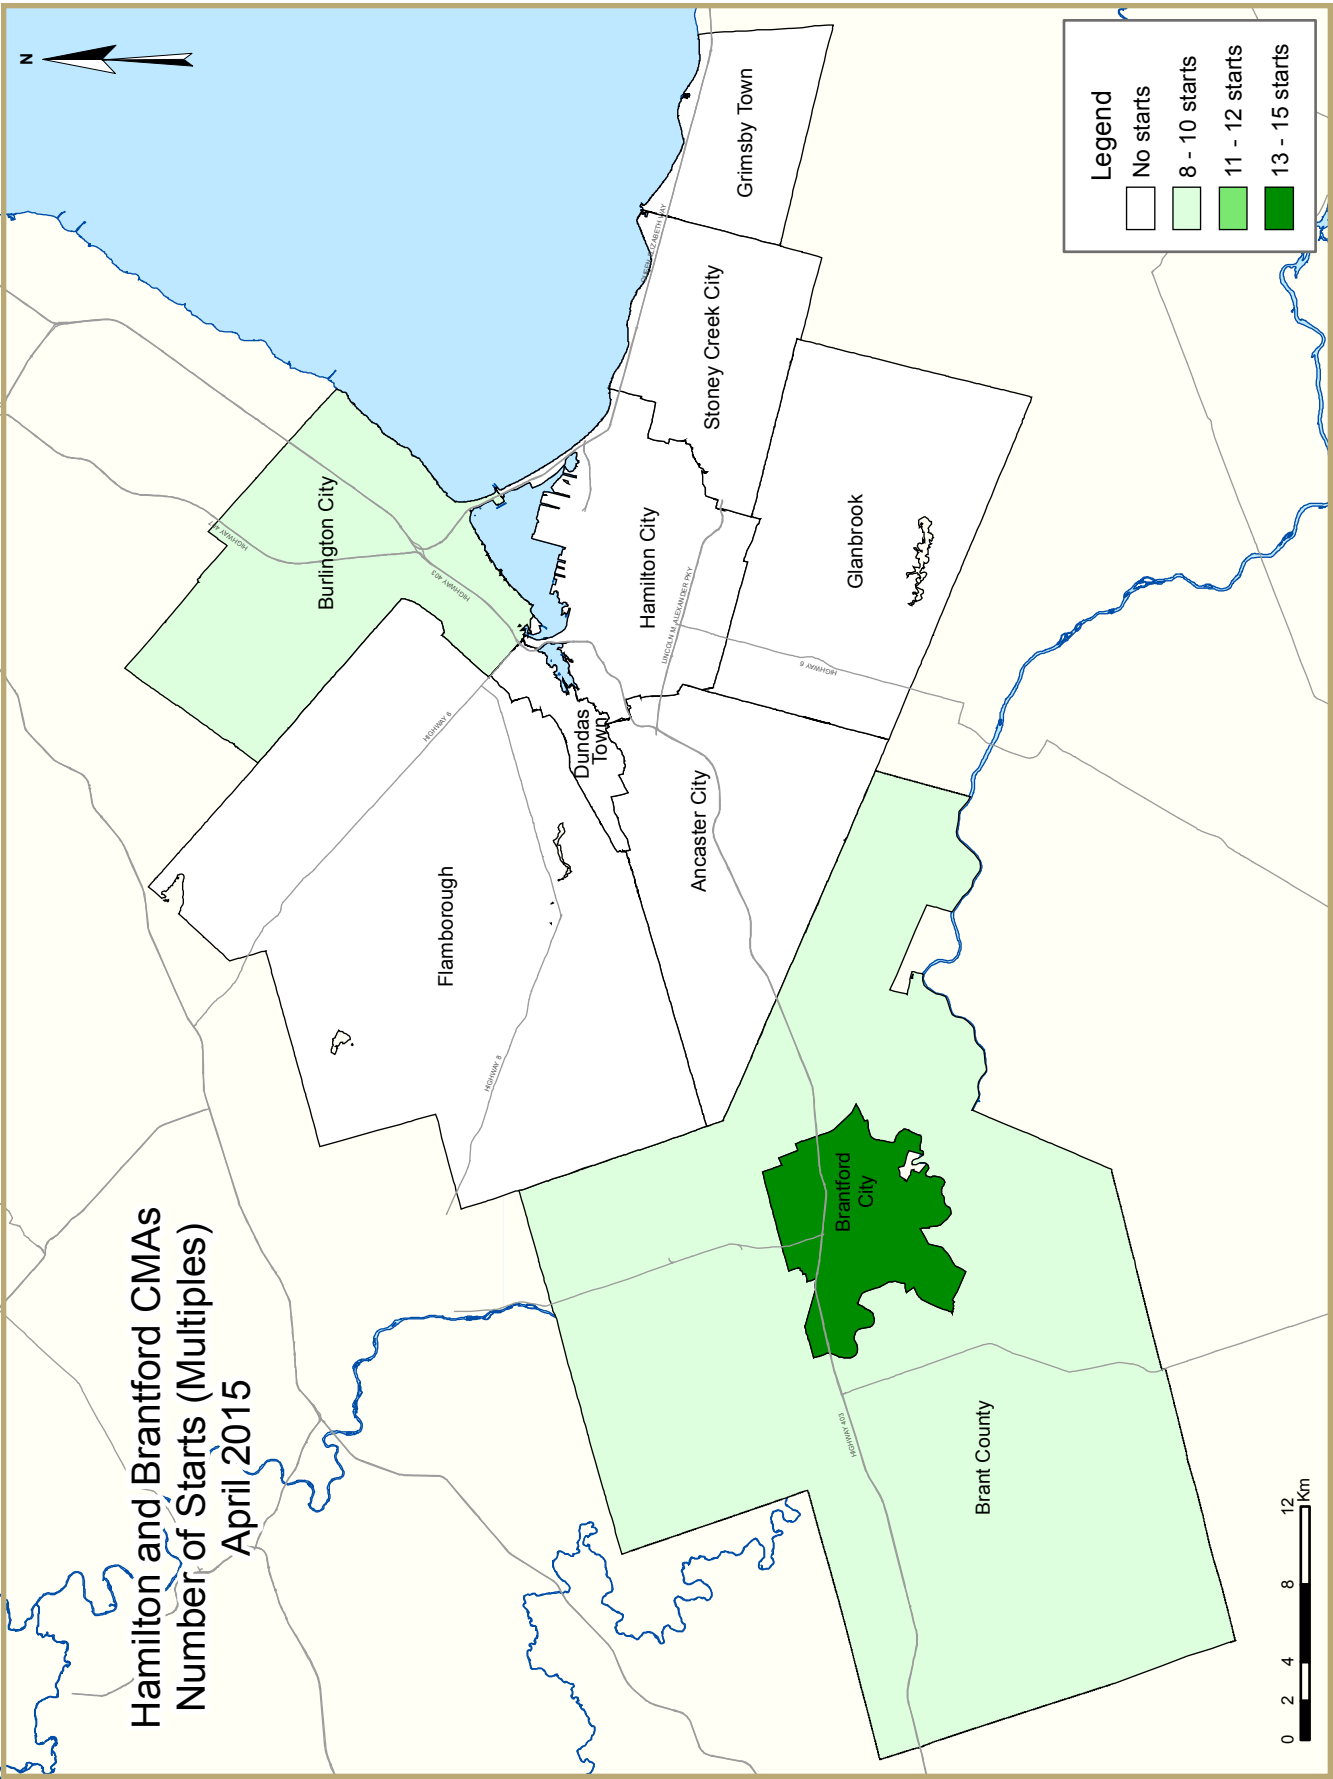

** Trend: Six-month moving average of the SAAR

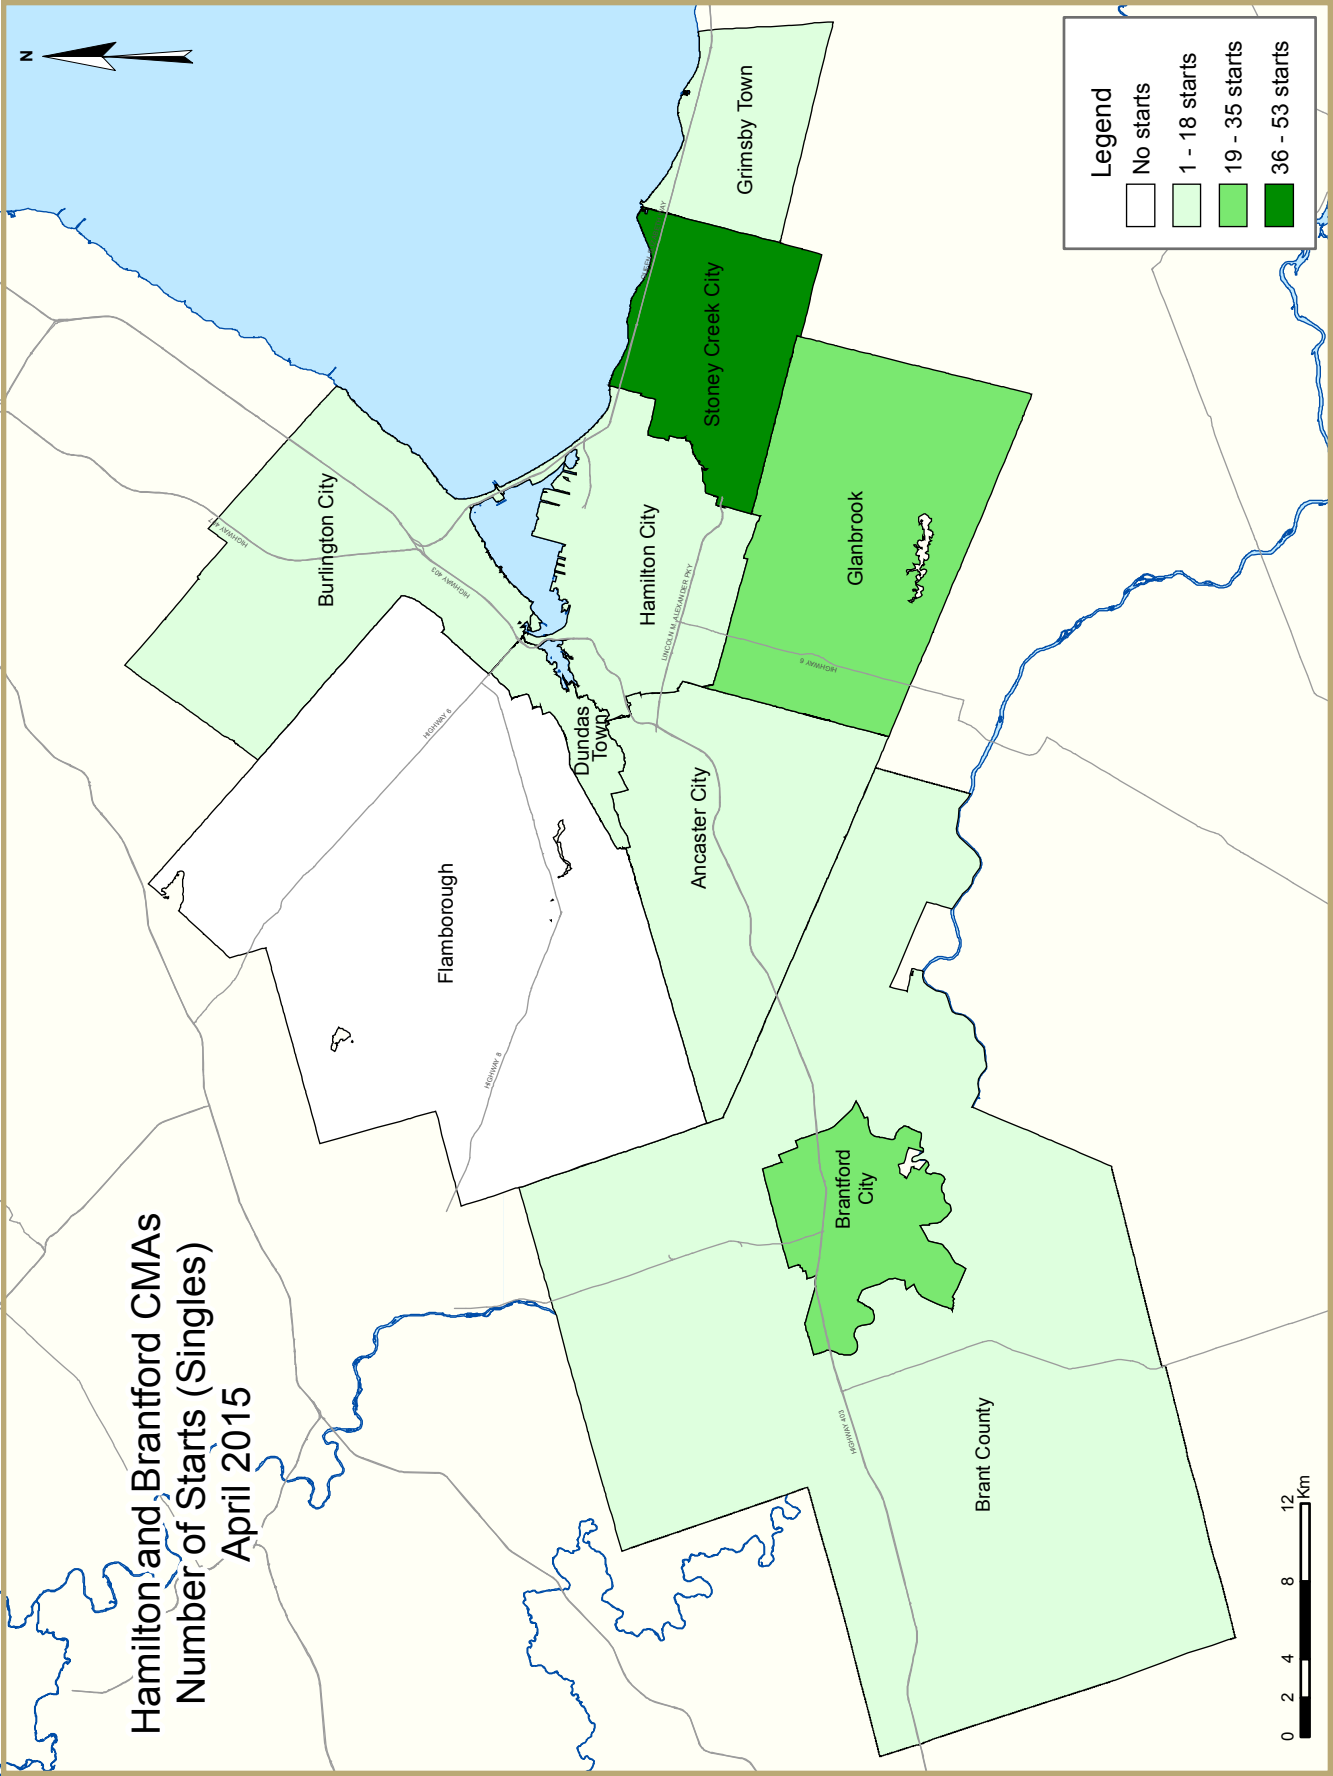

On a seasonally adjusted basis, Brantford's existing home sales increased by 34 per cent in April compared to March, according to data from the Brantford Regional Real Estate Association. Conversely, the number of new listings was down 18 per cent in April, pushing up the sales-to-new-listings ratio to 99 per cent from 61 per cent in March. This month

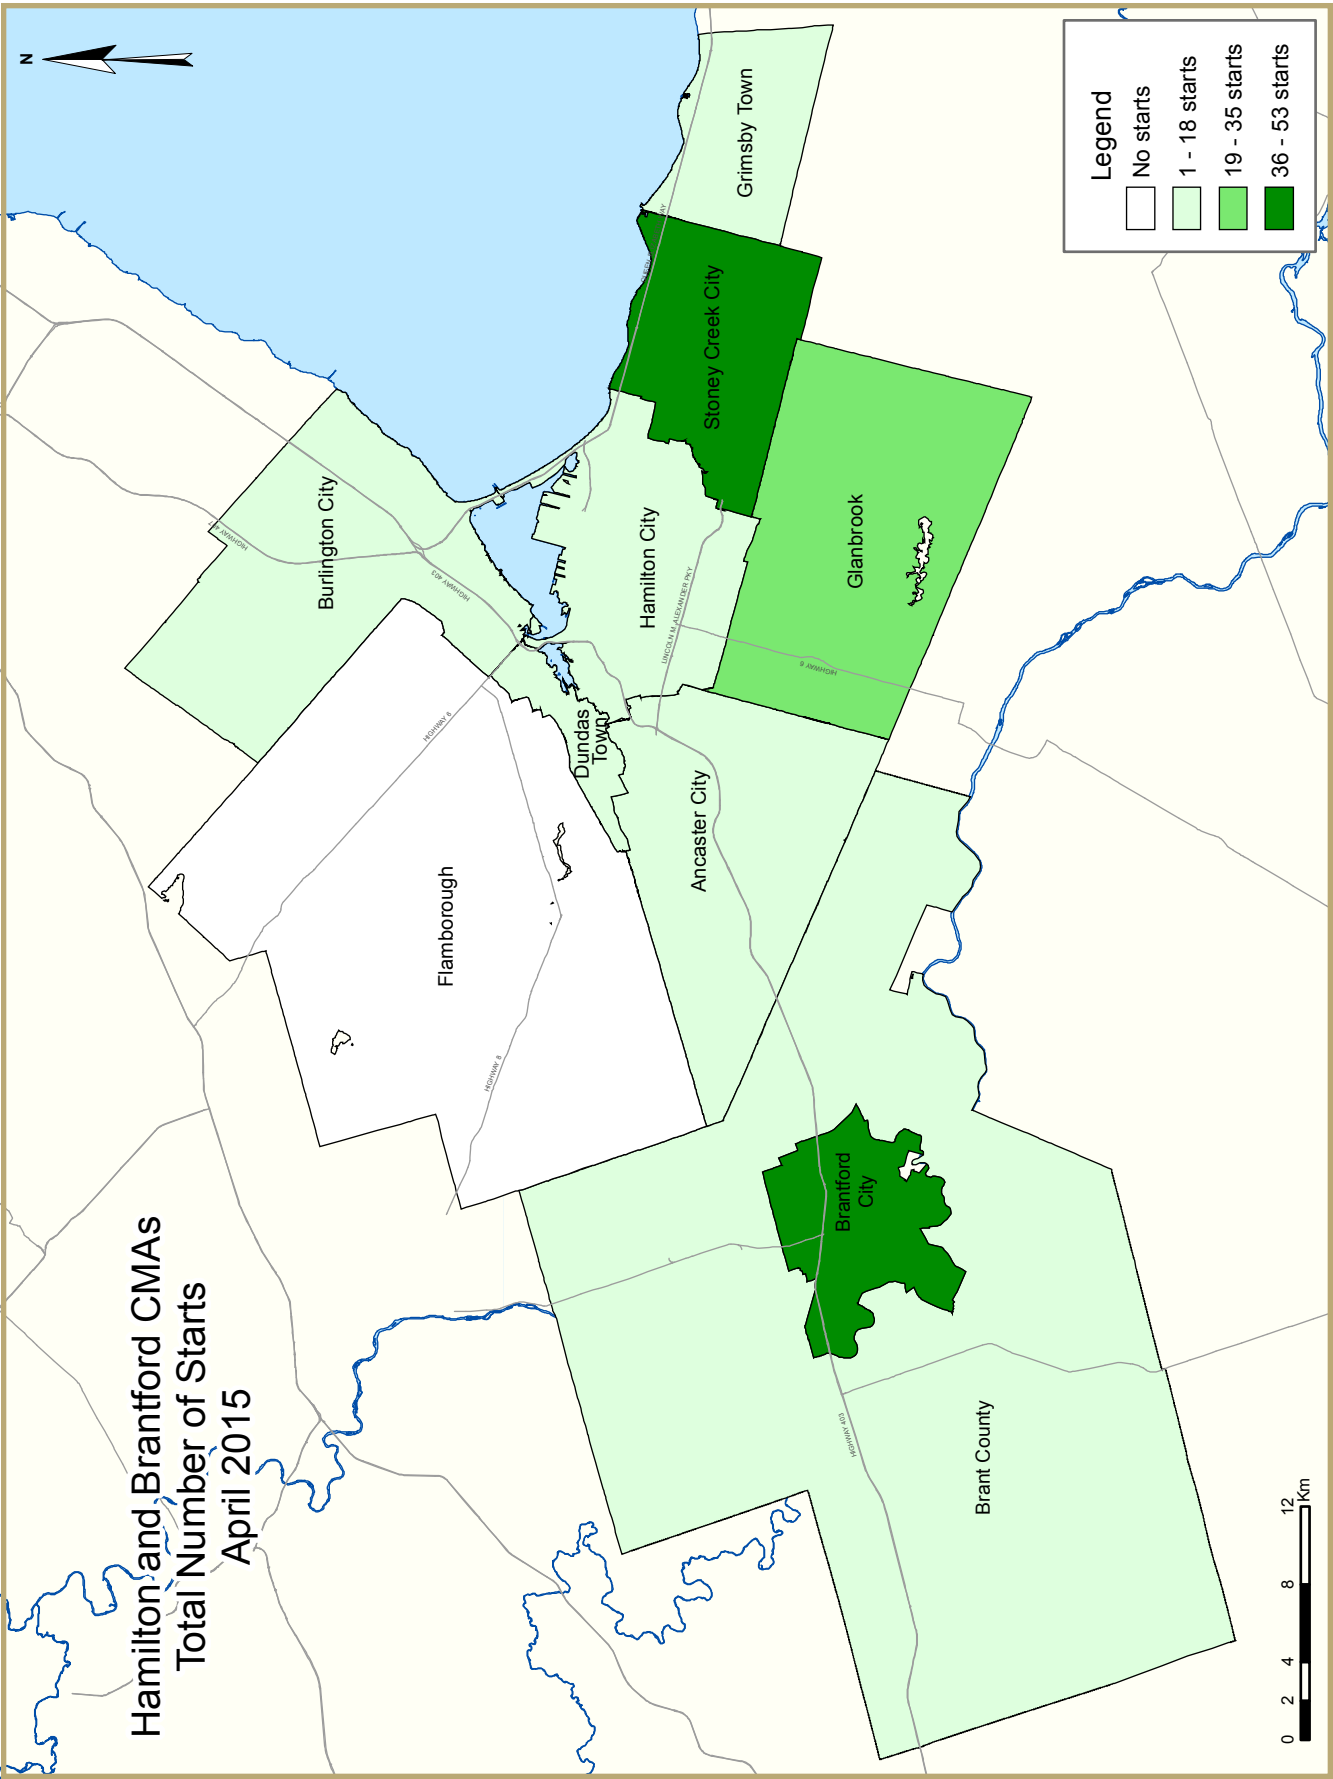

marked the highest reading of the sales-to-new-listings ratio on record. The average existing home price was up 13 per cent in April compared to March, reflecting the tight market conditions.

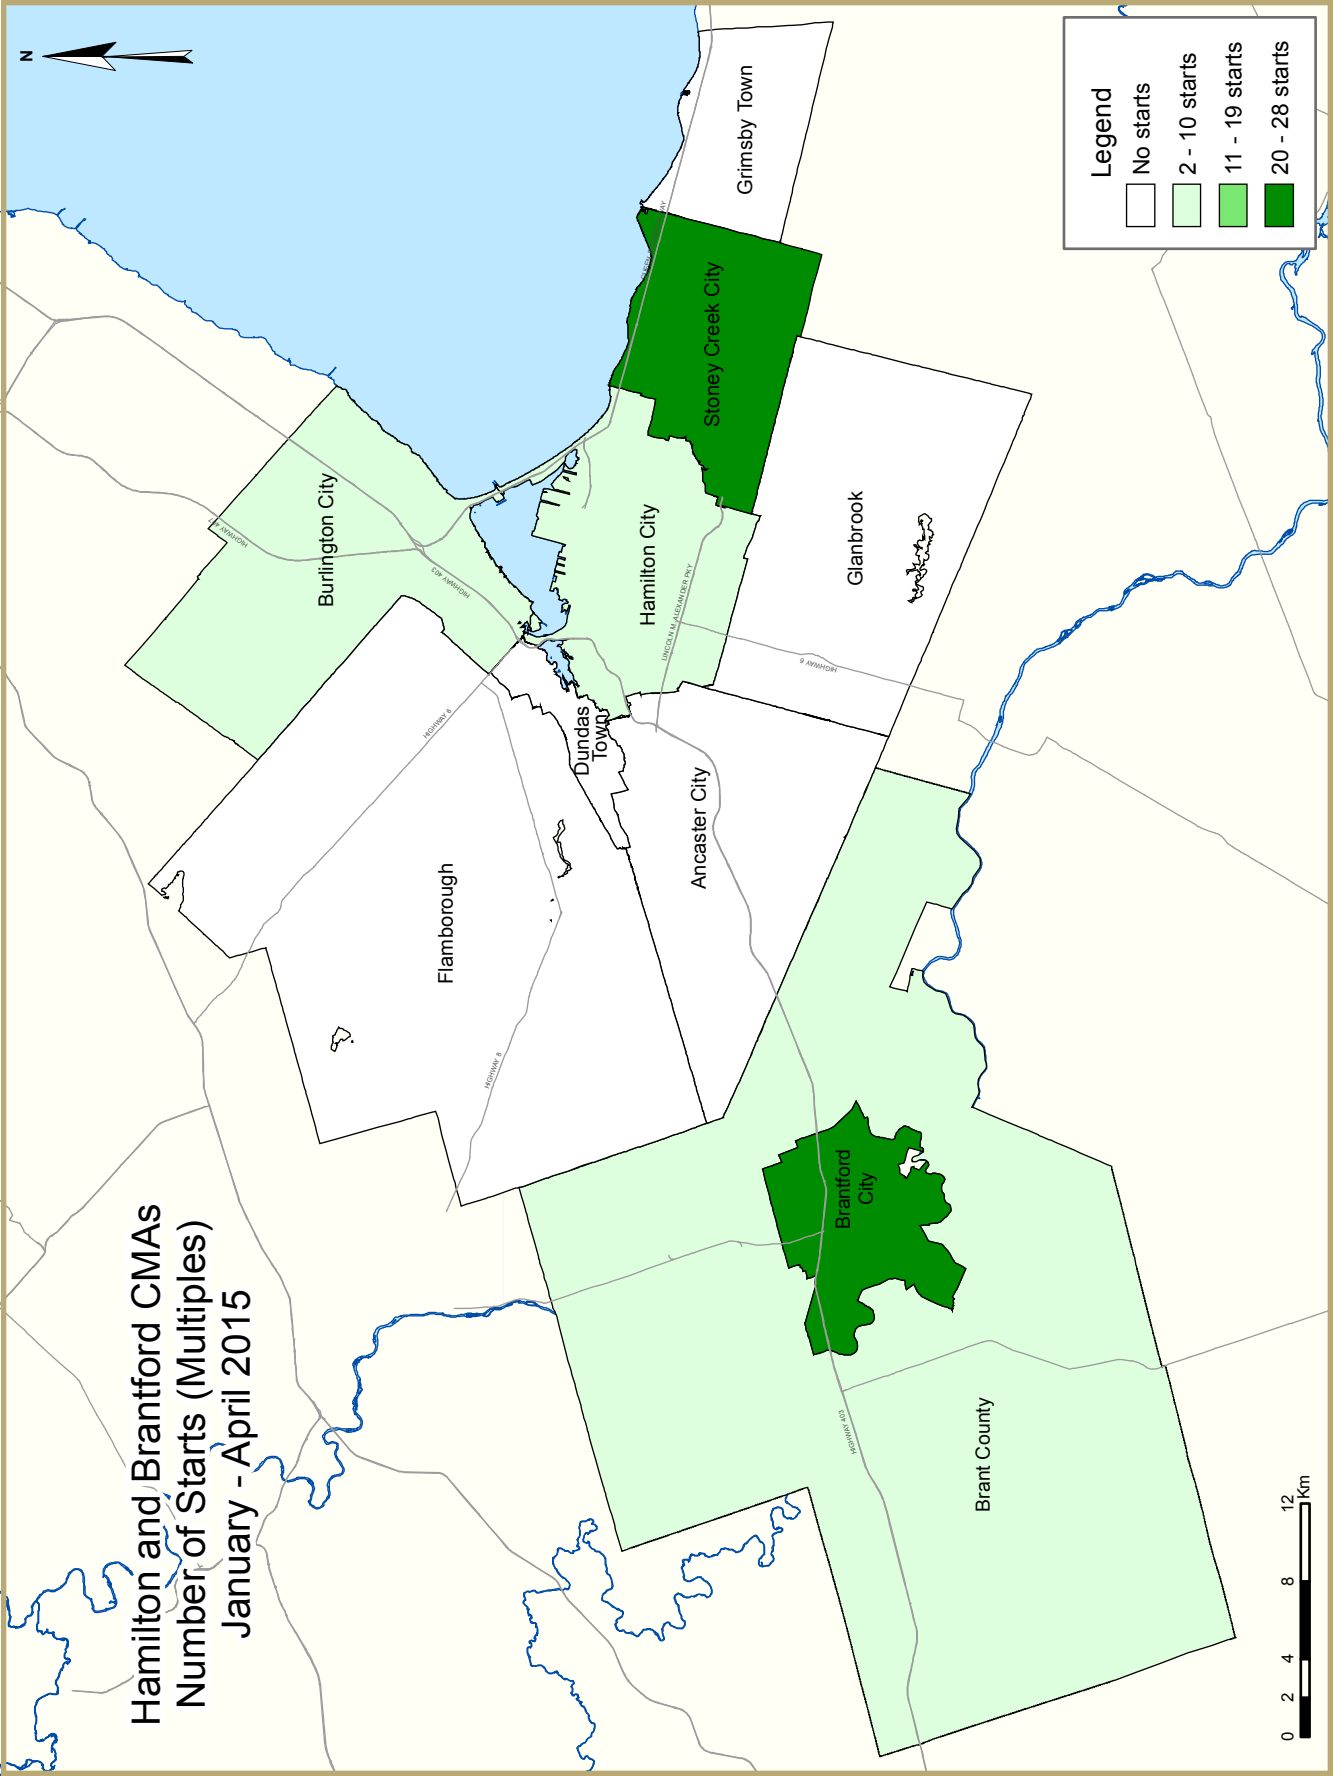

Following six consecutive monthly increases, total employment in Brantford was down 1.1 per cent in April compared to March, on a

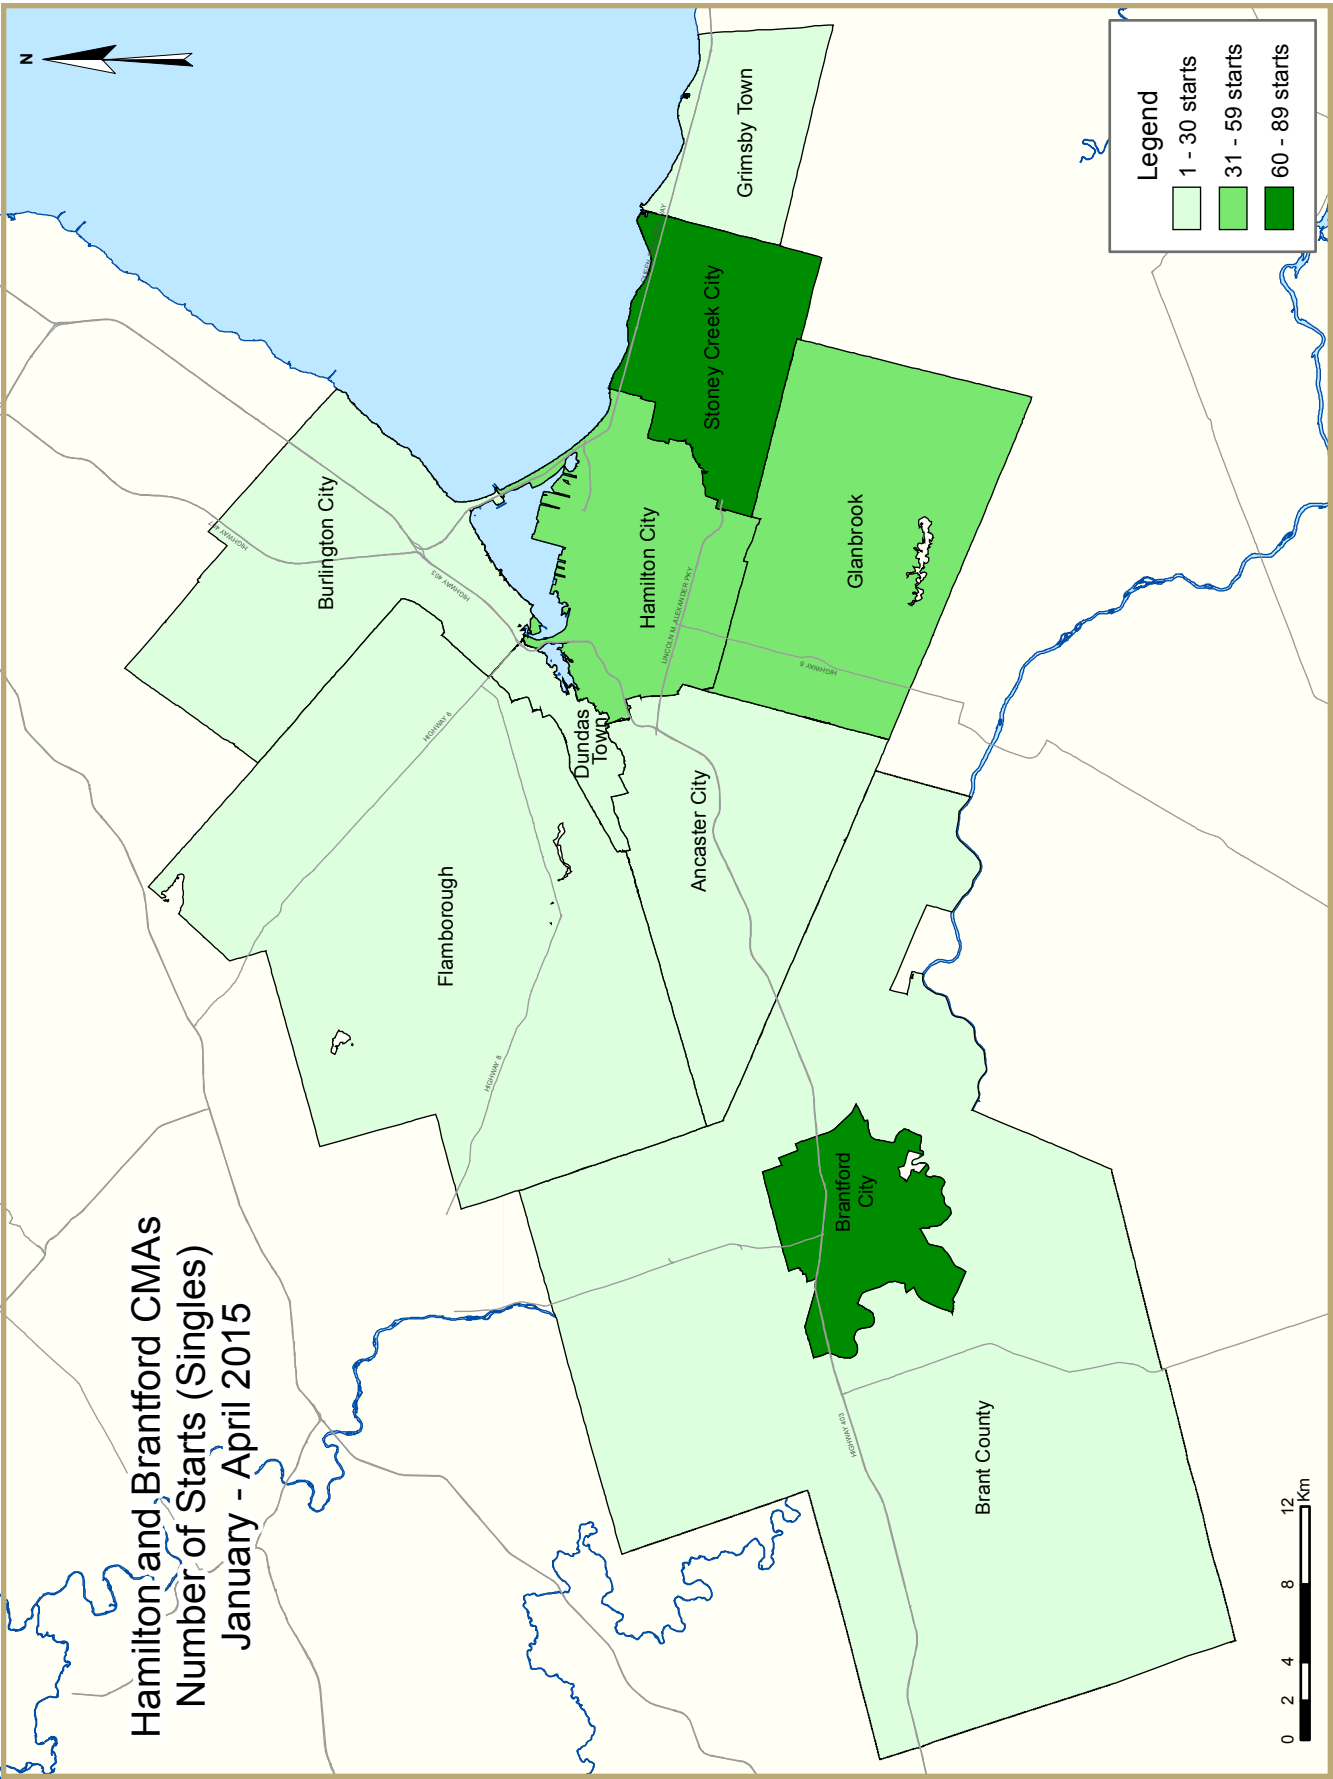

seasonally adjusted basis. Although total employment eased in April, this had little impact on either starts or sales. Changes in employment only affect housing demand after a lag of three to six months, and despite the decline in April, employment remained at a relatively high level after the strong growth through fourth quarter of 2014.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
