

# HOUSING NOW

## Hamilton and Brantford CMAs

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: September 2015

### Highlights

- The trend in Hamilton CMA total housing starts was up.
- The August increase in the trend measure of housing starts was broadly based. Strong job creation and relatively low mortgage rates continued to support housing demand in Hamilton.
- The trend in Brantford CMA total housing starts was up.

Figure 1

\*SAAR<sup>1</sup>: Seasonally Adjusted Annual Rate.

\*\*Trend: Six-month moving average of the SAAR

<sup>1</sup> The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

## Hamilton CMA Total Housing Starts Trending Up

Housing starts in the Hamilton Census Metropolitan Area (CMA) were trending up at 1,822 units in August compared to 1,701 units in July. The trend is a six month moving average of the monthly seasonally adjusted annual rate (SAAR) of housing starts. The August increase in the trend measure of housing starts was broadly based, with starts of all dwelling types trending up. This suggests there has been a general recovery from the decline seen during the first half of the year, particularly for multi-unit housing.

The standalone monthly SAAR was 1,889 units in August, down from 2,615 units in July, following four consecutive monthly increases. This month's decline in the SAAR measure could be transitory due to the volatile nature of apartment starts. Improving employment conditions coupled with low mortgage rates will translate into higher housing starts in the coming months. According to Statistics Canada labour force survey data, employment in Hamilton was up 0.2 per cent in August compared to July, on a seasonally adjusted basis. This August marked the sixth straight month of growth in employment. The unemployment rate remained practically stable at 5.2 per cent in August.

On a seasonally adjusted basis, existing home sales declined by 1.5 per cent in August compared to July. Conversely, the number of new listings increased 4.6 per cent, pushing down the sales-to-new listings ratio to 72 per cent in August from 76 per cent in July. Despite the decline in the sales-to-new listings ratio, the average existing home price was up 8.6 per

cent in August compared to July, on a seasonally adjusted basis. The large gain in the average price was mainly due to a compositional effect. The existing home sales decline was more pronounced in the lower price ranges which helped explain the significant increase in the average home price in August. However, existing home sales in Hamilton are still above the ten-year average.

## Brantford CMA Total Housing Starts Trending Up

Housing starts in the Brantford Census Metropolitan Area (CMA) were trending up at 909 units in August compared to 868 units in July. The August increase in the trend measure of housing starts was mainly due to a continued strength in townhouse construction. Full time employment growth for the 25 to 44 age group has supported the demand for townhouses. This age group has a higher concentration of first-time buyers, who tend to be more price-

sensitive than other buyers. New townhouses are generally more affordable than new single-detached dwellings. The trend in single-detached housing starts was relatively flat in August.

The standalone monthly SAAR was 658 units in August, down from 2,336 units in July. This month's decline in the SAAR measure was entirely due to fewer apartment starts compared to an unusually high number of apartments that started in July. Despite this month's decline, apartment starts reached 153 units during the first eight months of this year compared to only 30 units in the same period of 2014.

On a seasonally adjusted basis, Brantford's existing home sales increased by 4.4 per cent in August compared to July, according to data from the Brantford Regional Real Estate Association. The number of new listings increased by 3.8 per cent in August compared to July, on a seasonally adjusted basis.

Figure 2

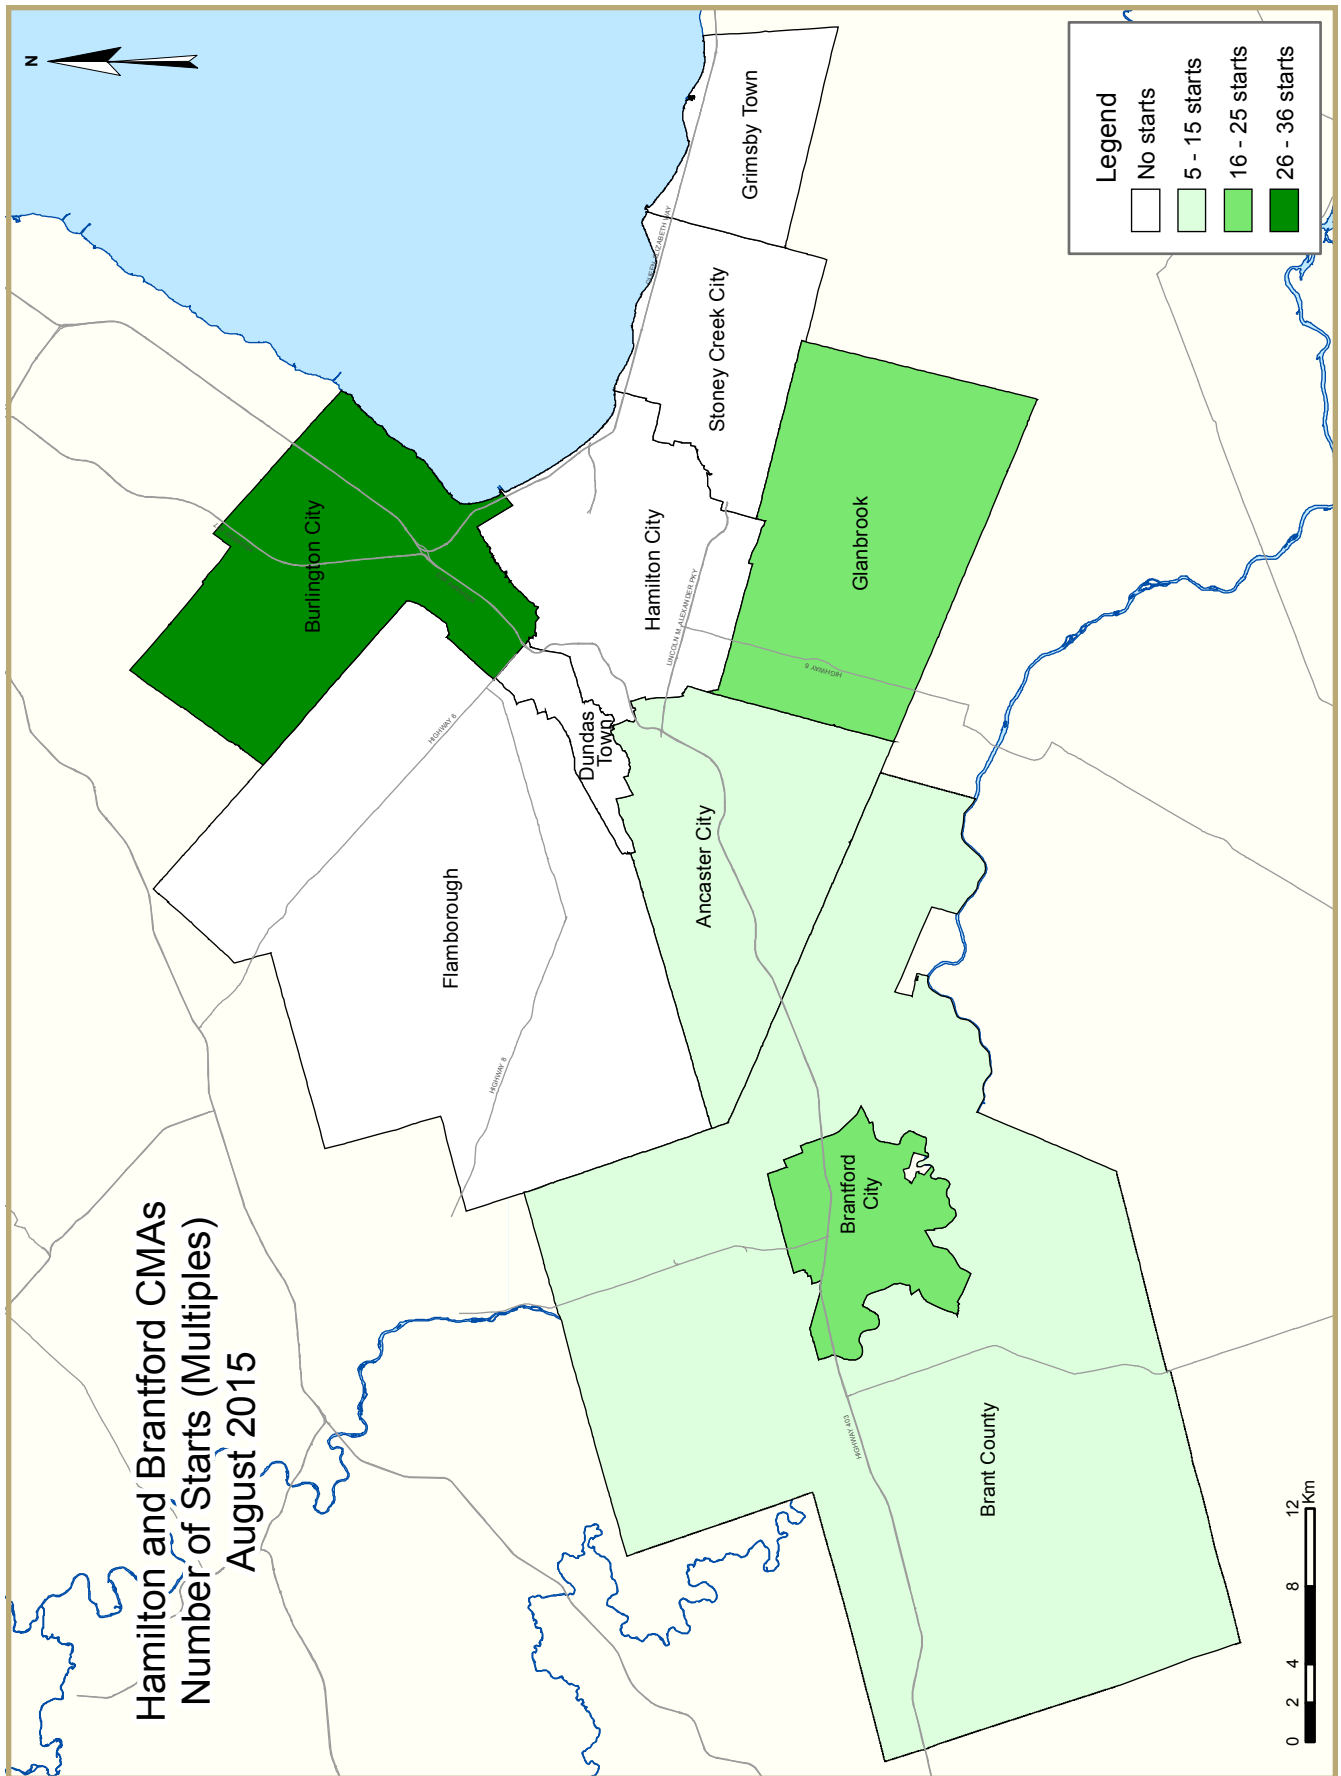

\* SAAR<sup>1</sup>: Seasonally Adjusted Annual Rate.

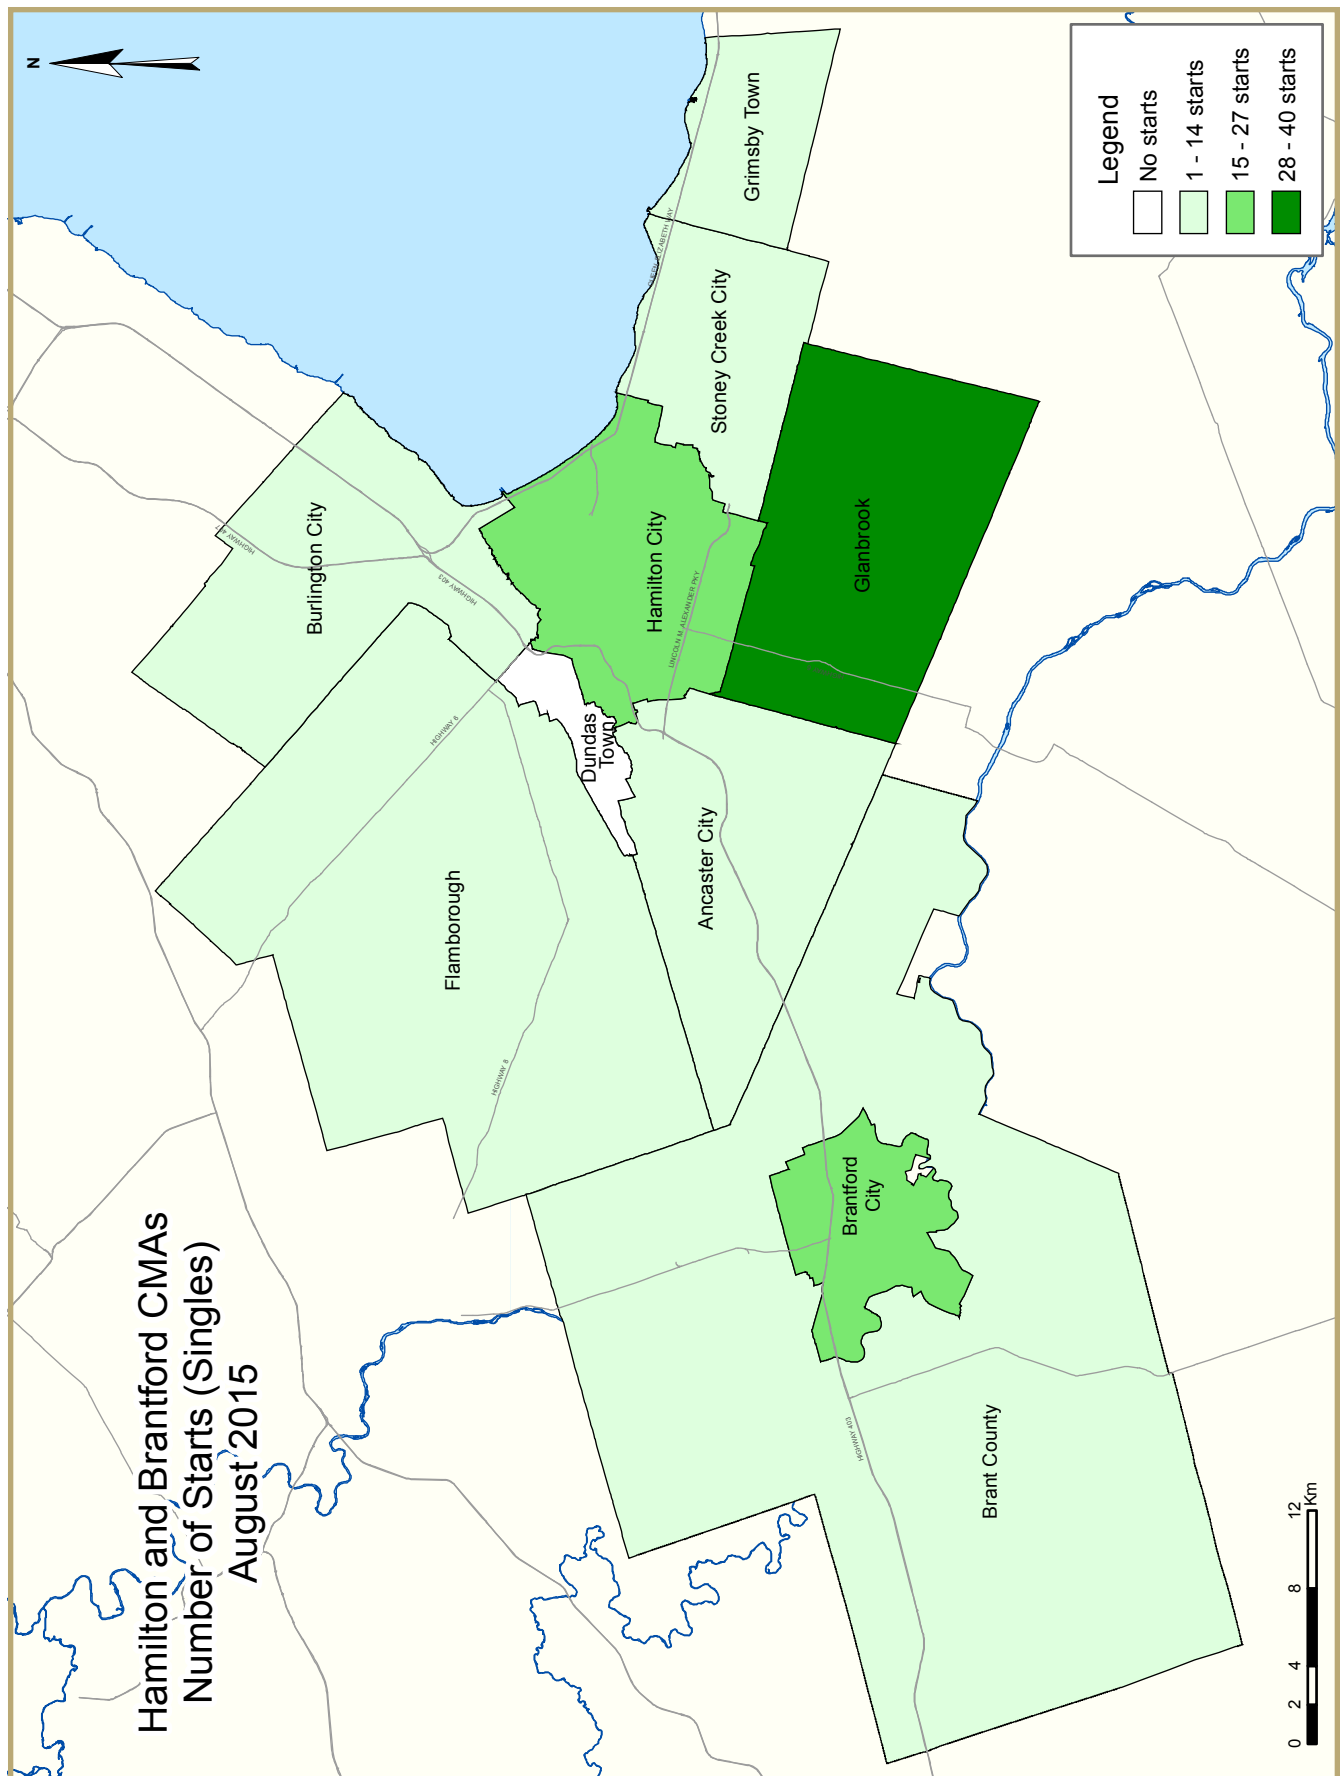

\*\* Trend: Six-month moving average of the SAAR

Given that the growth in the number of sales outpaced the growth in the number of new listings, the sales-to-new-listings ratio increased to 82 per

cent in August from 80 per cent in July. As a result, the average existing home price increased by 1.2 per cent in August compared to a steep decline

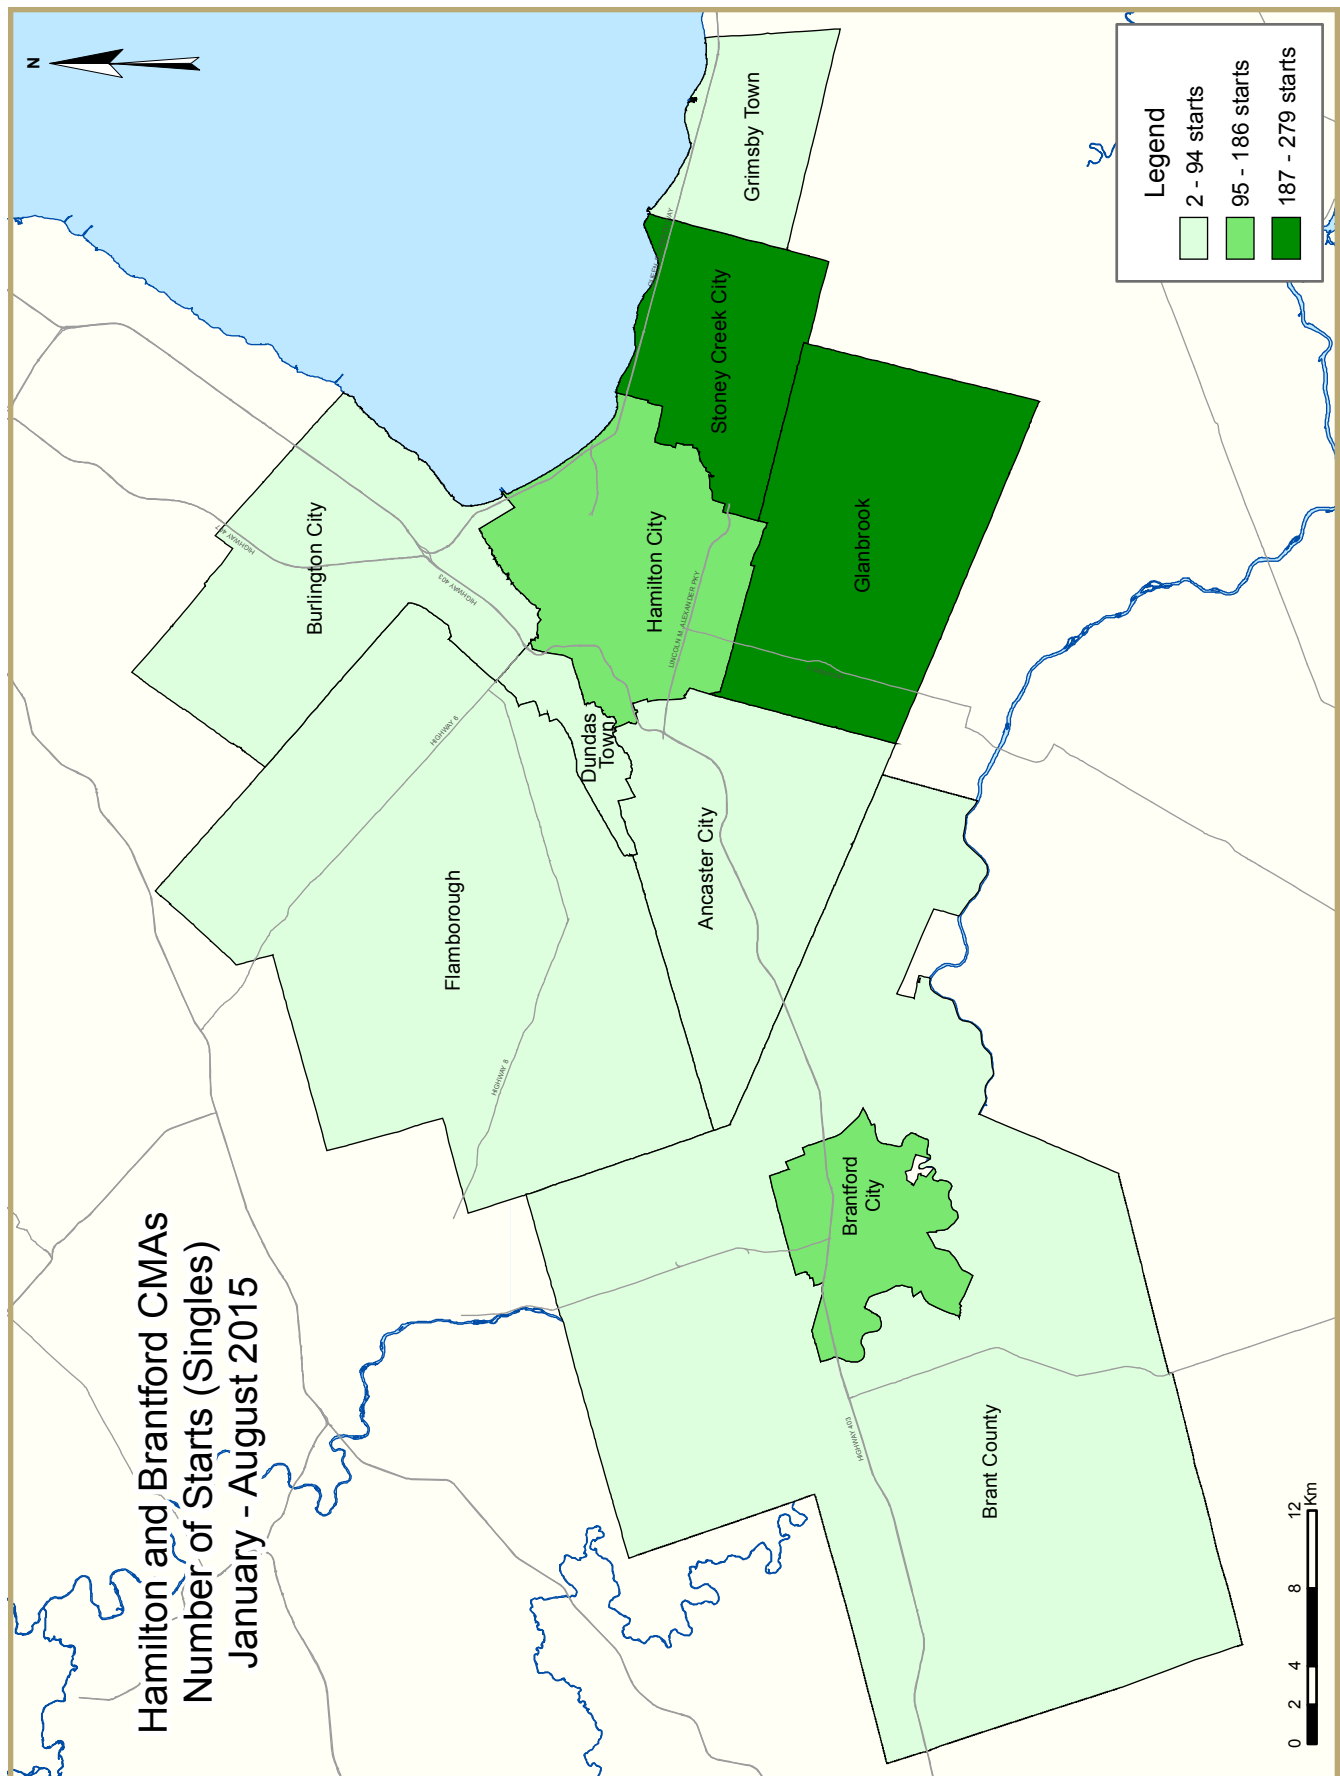

in July, on a seasonally adjusted basis. Total employment in Brantford was up by 0.5 per cent in August compared to July, on a seasonally adjusted basis.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
