HOUSING MARKET INFORMATION

HOUSING NOW Windsor CMA

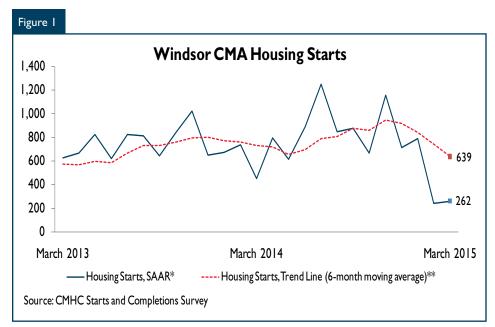

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2015

Highlights

- Total housing starts were lower due to fewer starts of all dwelling types.
- MLS® sales increased due to job growth and lower carrying costs for the average resale home.
- The average MLS[®] price was stable.

^{*}SAAR1: Seasonally Adjusted Annual Rate.

^{**}The trend is a six-month moving average of the monthly SAAR.

¹ The seasonally adjusted annual rate (SAAR) is a monthly figure for starts adjusted to remove normal season variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Windsor Census Metropolitan Area (CMA) were trending down at 639 units in March compared to 741 in February, according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. The trend moved down due to fewer single-detached, semi-detached and row home starts over the past six months.

Seasonally adjusted starts of all dwelling types decreased in the first quarter of 2015, despite a low number of completed and unsold units. Homeownership demand has increased in Windsor, but primarily for homes priced under \$200,000. With very few options in the new home market under \$200,000, most buyers went to the resale market to find a home. Only a small percentage of new row homes can be purchased for under \$200,000 in Windsor, and they are generally designed for the growing population aged 55 years and older. Condo apartment construction remained relatively inactive. Therefore, few new home products were available to satisfy greater demand from younger first-time buyer households.

The average price of an absorbed new single-detached home was \$405,020. It grew more than the median price, indicating that a greater share of new single-detached homes this quarter were at the highest end of the price spectrum. Demand for large custombuilt new single-detached homes has partly been driven by older households migrating to Windsor from pricier housing markets.

More than half of total starts were recorded in the City of Windsor, which was greater than the average of the past two years. Starts were unusually low in Lakeshore and Amherstburg, while starts in Lasalle and Tecumseh were in line with recent historical trends.

Existing Home Market

Seasonally adjusted existing home sales were higher than the fourth quarter of 2014 in the Windsor CMA. Job growth over the last three quarters contributed to the increase in sales. A majority of the jobs added over that period were full-time positions. A minimum household income of just \$35,000 to \$40,000 is required to purchase the average resale home in the Windsor CMA with a five per cent down payment. Therefore, a large share of individuals

that recently secured a full-time job in Windsor were likely able to meet the income qualification criteria for a mortgage. A flat average resale home price and slightly lower mortgage rates also led to a slight decrease in the carrying costs of the average home.

The resale market tightened in the first quarter due to higher sales and fewer new listings. The sales-to-new-listings ratio was 65 per cent, which has traditionally been synonymous with a seller's market in Windsor. However, the seasonally adjusted average price of a resale home was relatively unchanged at \$188,461. The lack of price growth in a tight market suggests a greater share of sales in the first quarter was of homes in the lower price ranges. First-time buyer demand appears to have strengthened in Windsor.

Lower Priced Housing Attracts New Residents to Windsor

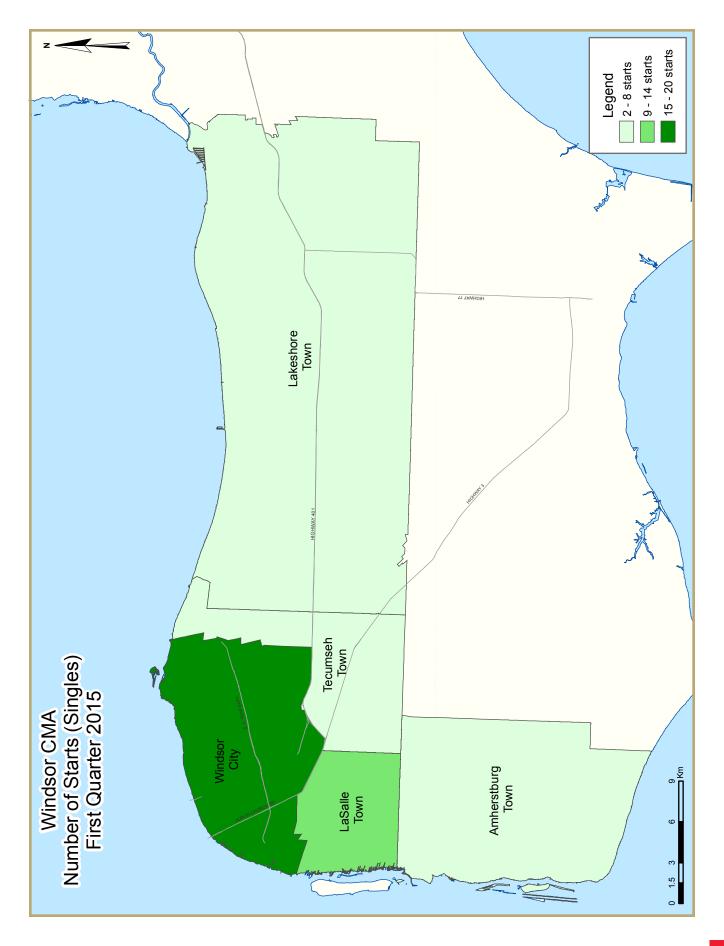

According to Statistics Canada, approximately 44,000 people migrated to Windsor CMA from 2009-2013. Over that five year period the greatest number of migrants came from smaller centres that were outside of Ontario's Census Metropolitan Areas, primarily ones close to Windsor CMA in Essex, Chatham-Kent and Lambton. A desire to live closer to the regional hospital, public transportation and other core public services

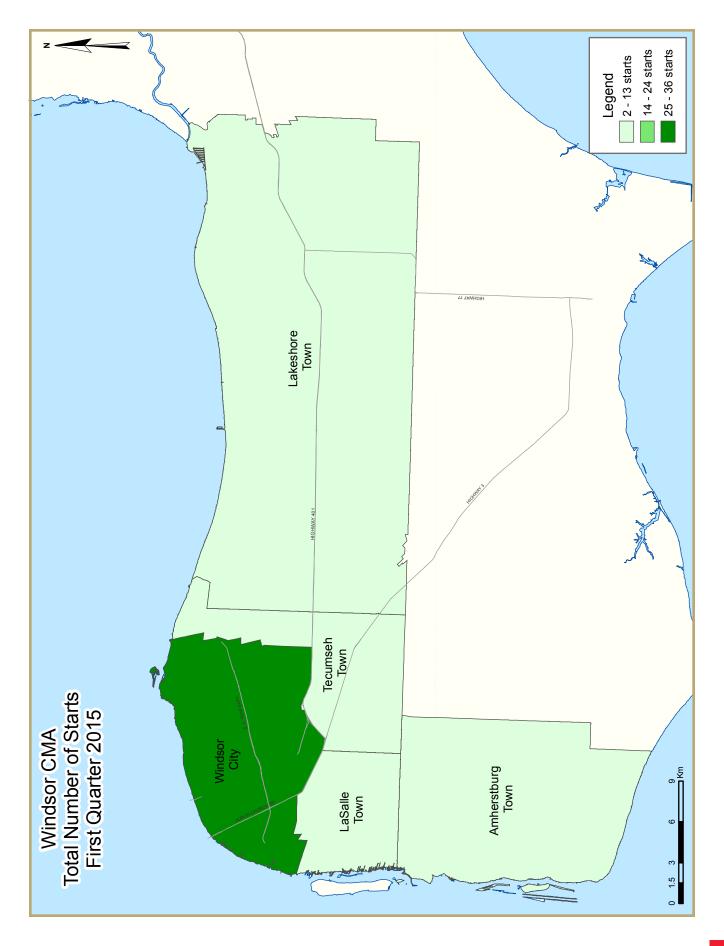

found in the City of Windsor likely factored into their decision to re-locate. About a quarter of people migrating to Windsor came from other countries. Immigration primarily impacted Windsor's rental housing market, helping the vacancy rate to decrease each year over that period. Statistics Canada's National Household Survey revealed that 69 per cent of immigrant households rented in their first five years in Windsor. People from the next five CMAs to have the greatest migration into Windsor came from some of the priciest housing markets in Canada. The average resale home

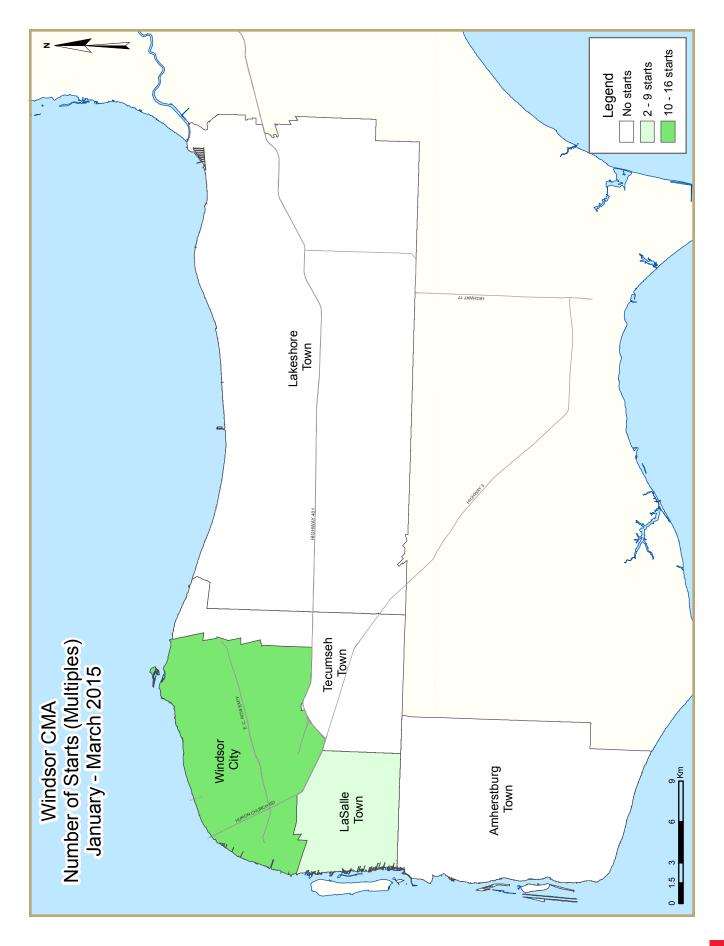

price in Toronto was about triple the average resale home price in Windsor, while the average resale home in Calgary was about two and half times pricier than in Windsor. In particular, older households from those pricier areas were lured by the ability to own a home that was similar or larger than what they currently owned after retirement.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
