HOUSING MARKET INFORMATION

HOUSING NOW Windsor CMA

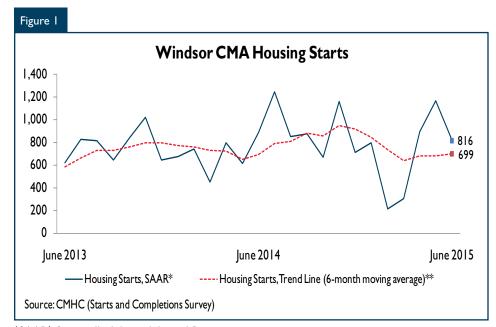

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2015

Highlights

- Seasonally adjusted total housing starts were higher than the first quarter of 2015 due to greater row home and single-detached starts.
- Seasonally adjusted MLS[®] sales increased by nine per cent.
- The seasonally adjusted average MLS® price increased as market conditions continued to favour sellers.

*SAAR1: Seasonally Adjusted Annual Rate.

**The trend is a six-month moving average of the monthly SAAR.

¹ All starts figures in this release, other than actual starts and the trend estimate, are seasonally adjusted annual rates (SAAR) — that is, monthly figures adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels. The trend is the six month moving average of the monthly SAAR for housing starts.

New Home Market

Housing starts in the Windsor Census Metropolitan Area (CMA) were trending up slightly at 699 units in June compared to 682 in May, according to Canada Mortgage and Housing Corporation (CMHC). The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. Total housing starts trended up due to greater row home starts.

On a quarterly basis, seasonally adjusted total starts rebounded strongly from the low number of seasonally adjusted total starts in the first quarter of 2015. The strong rebound was partly due to some starts being delayed as the result of irregular weather in the first quarter of 2015. Demand for new homes has also increased due to a tight resale market. The number of homes listed for sale has been insufficient to satisfy demand. Builders capitalized on this market imbalance by increasing housing starts in the second quarter. Higher row home and single-detached home starts accounted for the increased number of starts from the first guarter of 2015. Semi-detached and apartment starts remained relatively dormant.

At the halfway point of 2015, total starts in Windsor CMA were greater than in the first six months of 2014. Total starts were up in all sub-markets of Windsor CMA, with the exception of Tecumseh. The greatest growth in total starts was in LaSalle, where a greater number of single-detached starts occurred. The City of Windsor also had higher total starts year-todate in 2015 compared to the halfway point of 2014, with nearly all the growth occurring in its eastern region.

The average price of all new singledetached homes absorbed in the

first half of 2015 was \$404,284, up from an average price of \$343,670 in the first six months of 2014. The higher year-to-date average price in 2015 can primarily be attributed to a larger share of new absorbed singledetached homes being on the high end of the price spectrum, as the gap between the median and average price was much larger this year. Approximately one of every three absorbed new single-detached homes priced \$450,000 or greater this year was constructed in LaSalle, the most of any sub-market of Windsor CMA.

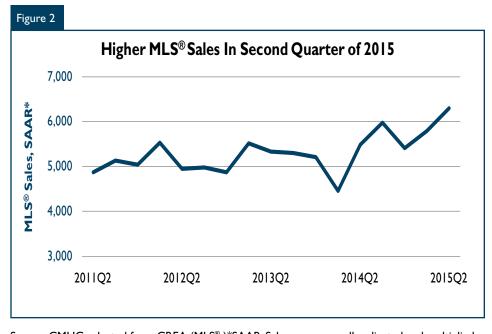

Existing Home Market

Seasonally adjusted MLS® sales increased nine per cent compared to the first quarter of 2015. The already low five year benchmark qualifying rate, which must be used to qualify for an insured variable rate or I to 4 year fixed rate mortgage, decreased to 4.64 per cent in early April. As a result, slightly more Windsor households were able to meet the income qualification for a mortgage

in the second quarter of 2015. Improved labour market conditions also encouraged more Windsor households to purchase a home. Seasonally adjusted employment has grown in Windsor in each of the last four quarters, including greater full-time employment in the first two quarters of 2015.

MLS[®] sales in all price categories established by the Windsor-Essex Association of Realtors® were greater in the first six months of 2015 compared to the same period last year. The greatest growth was of MLS® sales in the \$260,000 to \$299,999 price range, followed by homes that sold for \$420,000 or greater.

Resale market conditions in the second quarter were similar to the first quarter of 2015, as seasonally adjusted new listings grew about nine per cent, keeping pace with the growth in seasonally adjusted sales. The growth in new listings kept what was already a sellers' market from

Source: CMHC, adapted from CREA (MLS®)*SAAR: Sales are seasonally adjusted and multiplied by 4 to show an annual rate. MLS® is a registered trademark of the Canadian Real Estate Association

tightening further. The sale-to-new-listings ratio was unchanged at 66 per cent in the second quarter of 2015. A shortage of homes listed for sale relative to demand caused the average price of MLS® sales to appreciate by three per cent to \$194,216.

New listings in the first half of 2015 were approximately five per cent higher than in the first half 2014. New listings have started to trend up in Windsor, reversing the downward trend that had occurred since 2008. The average MLS® price in Windsor, adjusted for inflation, only began

to surpass pre-2008 levels in late 2014. The recent growth in new listings can primarily be attributed to a greater number of households having recovered all the value that was lost following the 2008 economic recession.

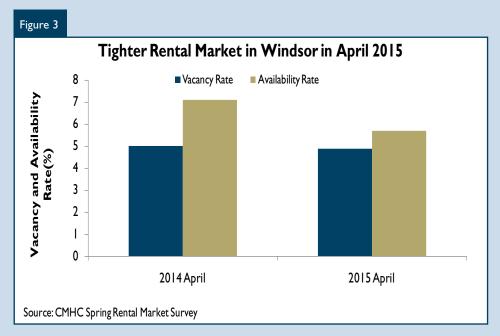

Vacancy Rate Doesn't Tell the Whole Story

CMHC conducted its annual Spring Rental Market Survey in April. The total vacancy rate for privately initiated rental apartments in structures of three units or more in Windsor was 4.9 per cent in April 2015, relatively unchanged² from the 5.0 per cent total vacancy rate in April 2014. Rental demand was steady, with a similar number of rental apartments occupied in both years' surveys. The number of apartments in the rental universe was also relatively the same in April 2014 and April 2015. Rental demand was supported by a higher employment rate for 15 to 24 year olds and a growing population of 25 to 34 year olds, which

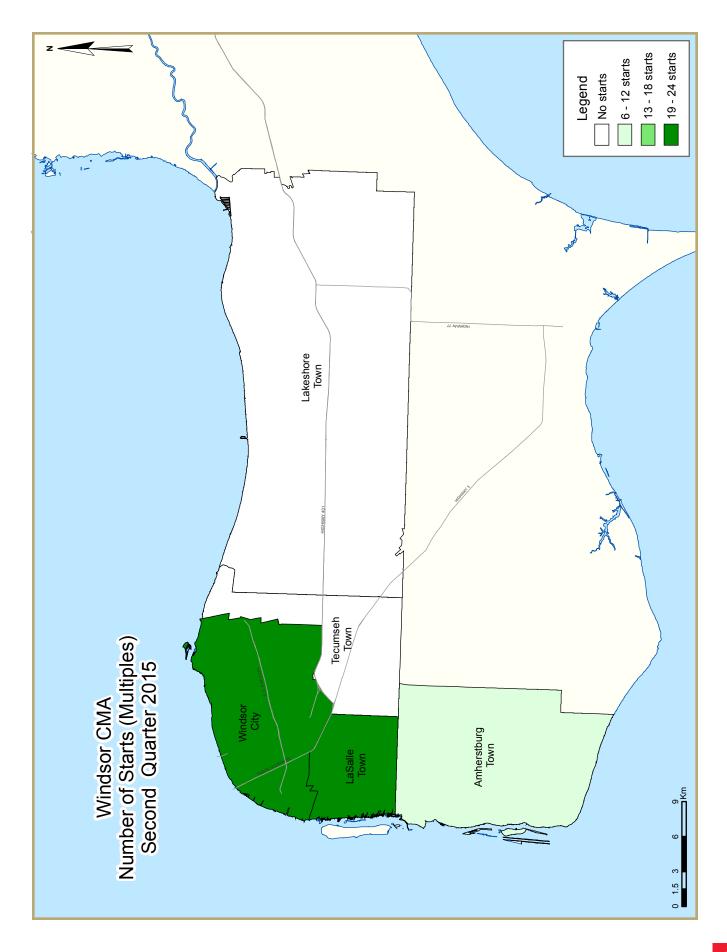

historically have been nearly as likely to head a rental household as an owner household in Windsor.

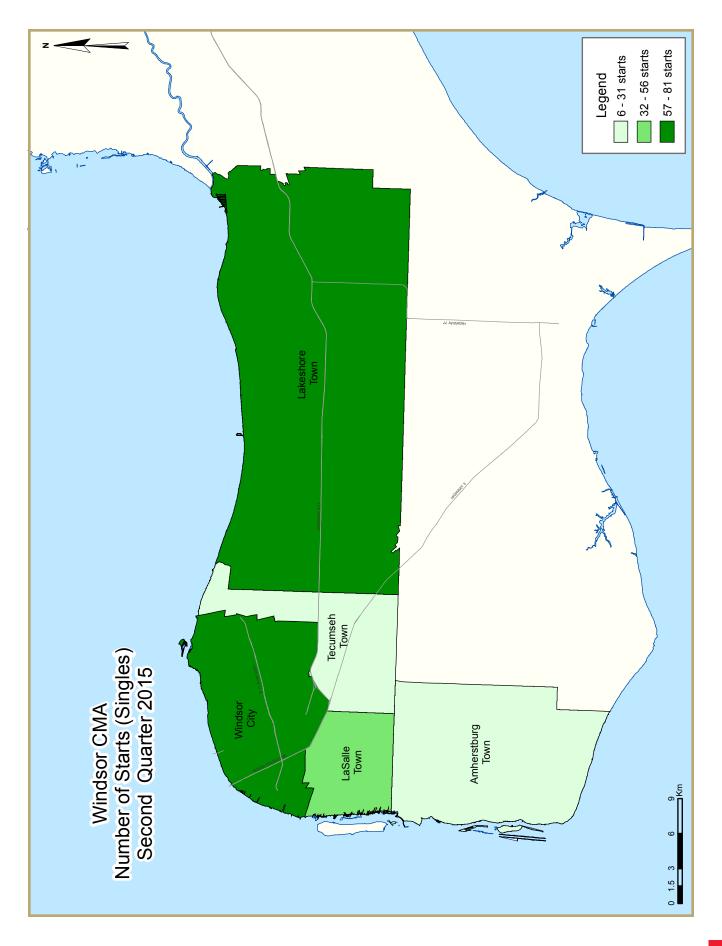

Despite the stable vacancy rate, rental market conditions were more favourable to rental property owners in April 2015 than in April 2014. The availability rate is also a useful statistic to assess the state of rental markets. It captures the percentage of apartments that are on the market. Apartments on the market include those which are already vacant as well as those which could become vacant because the existing

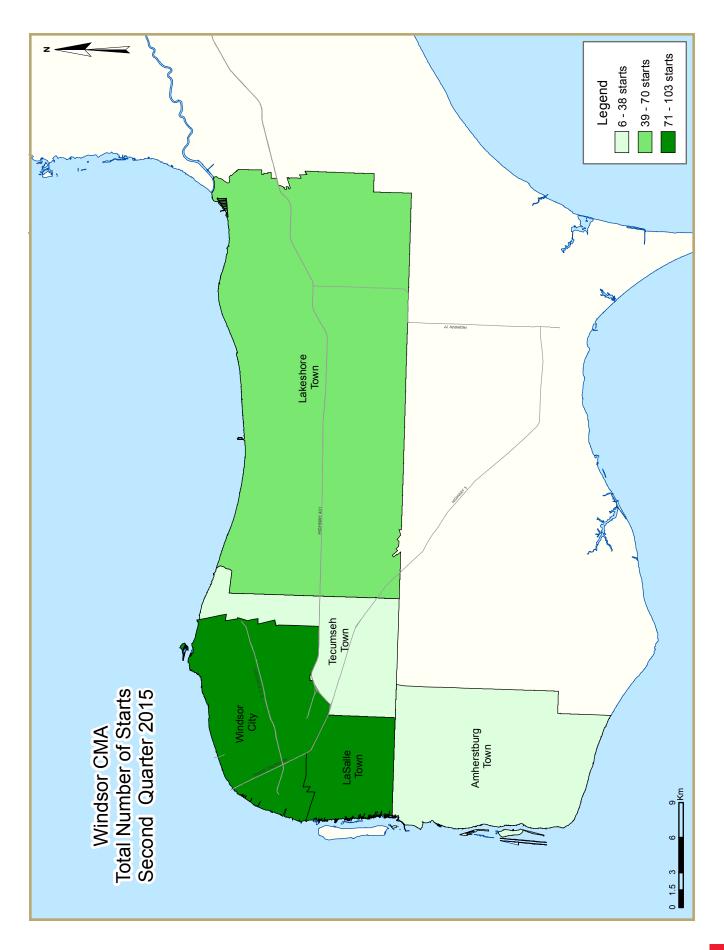

tenant was given, or had received, notice to move, and a new tenant had not signed a lease. In April 2015, 4.9 per cent of all rental apartments in Windsor were vacant and another 0.8 per cent could potentially become vacant, adding up to an availability rate of 5.7 per cent. In April 2014, 5.0 per cent of all rental apartments in Windsor were vacant and 2.1 per cent could potentially become vacant, adding up to an availability rate of 7.1 per cent. With fewer apartments on the market in April 2015 rental property owners were able to get tenants to agree to greater rent increases, on average, than in April 2014.

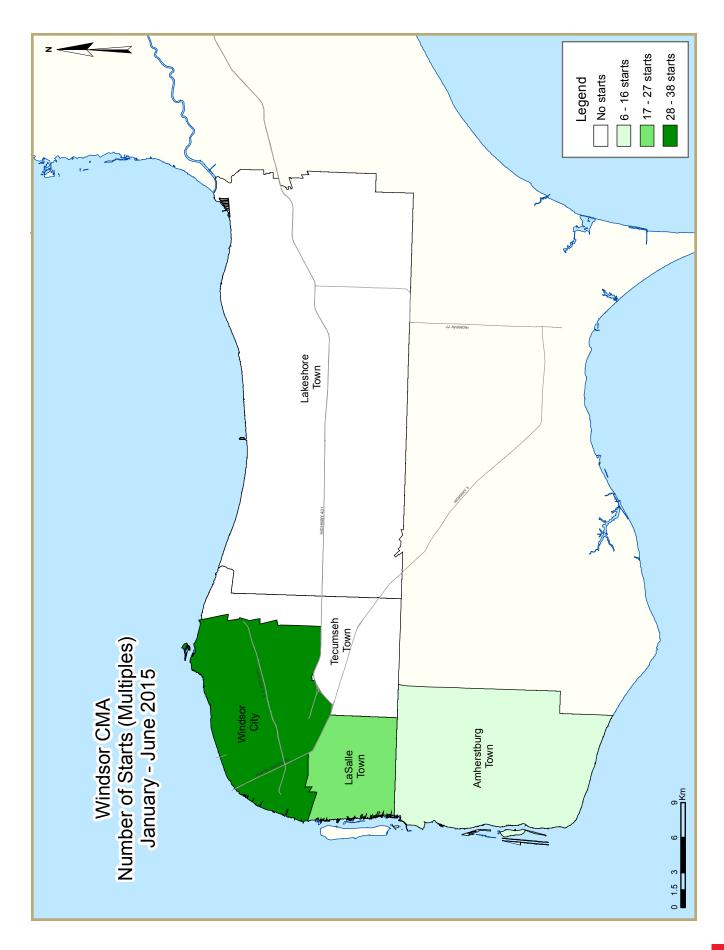

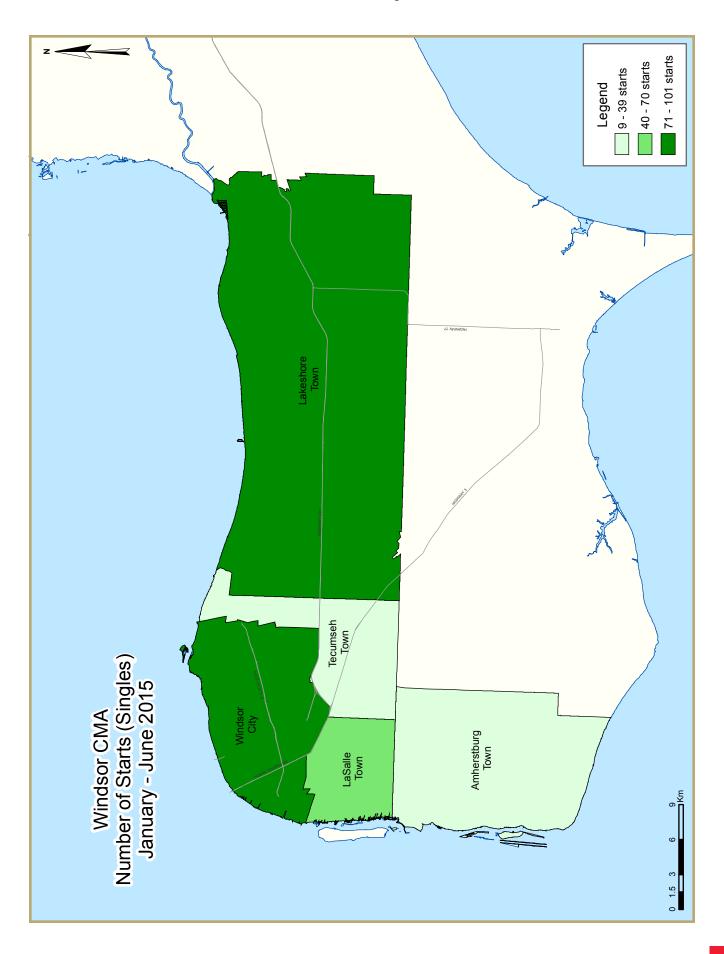

²The change in the vacancy rate for the current year was not significantly different, on a statistical basis, from the previous year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
