

# HOUSING NOW

## Calgary CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: June 2015

## Highlights

- The trend in housing starts moved lower in May
- Single-detached inventories in May were well below the preceding 10-year average
- Multi-family starts posted an increase due to strong gains in apartment construction

Figure 1

\* SAAR<sup>1</sup>: Seasonally Adjusted Annual Rate

<sup>1</sup> Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

## Housing Market Overview

Housing starts in the Calgary Census Metropolitan Area (CMA) were trending at 11,991 units in May compared to 12,028 in April. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts. The modest decline was due to a slower pace of single-detached starts, while multi-family starts trended slightly higher in May.

Actual housing starts in the Calgary CMA totalled 1,058 units in May, up three per cent from 1,030 in the previous year. This represents the first year-over-year increase since October 2014. The gain can be attributed to the increase in multi-family starts, while single-detached starts in May declined from a year earlier. To the end of May, total housing starts decreased 27 per cent from 6,887 in 2014 to 5,012 in 2015.

In the Calgary CMA, there were 299 single-detached units started in May, down 51 per cent from the same month a year earlier. The increased selection of homes in the resale market along with a moderation in housing demand has tempered the pace of new home construction this year. From January to May, single-detached starts amounted to 1,861 units, a 31 per cent decline from 2,696 units during the same period in 2014.

The number of complete and unabsorbed single-detached units was at 377 units in May, relatively unchanged from 383 units in the same

Figure 2

Source: CMHC

month a year earlier. Single-detached inventories have been relatively low this year averaging 364 units per month compared to the 10-year average of 484 units per month. A high proportion of single-detached homes have been absorbed shortly after construction was finished and this has kept inventories from rapidly rising. Of the 377 single-detached units in inventory, 219 were show homes while 158 units were spec units.

The single-detached absorbed price averaged \$807,297 in May 2015, a 35 per cent increase from \$598,357 from the same month in 2014. The pronounced gain was due to a compositional shift as more homes were absorbed in the higher price ranges. In May, single-detached units priced at \$750,000 and higher

captured 41 per cent of total absorptions, compared to 16 per cent in the previous year. On a year-to-date basis, the single-detached average absorbed price increased 25 per cent year-over-year to \$764,377.

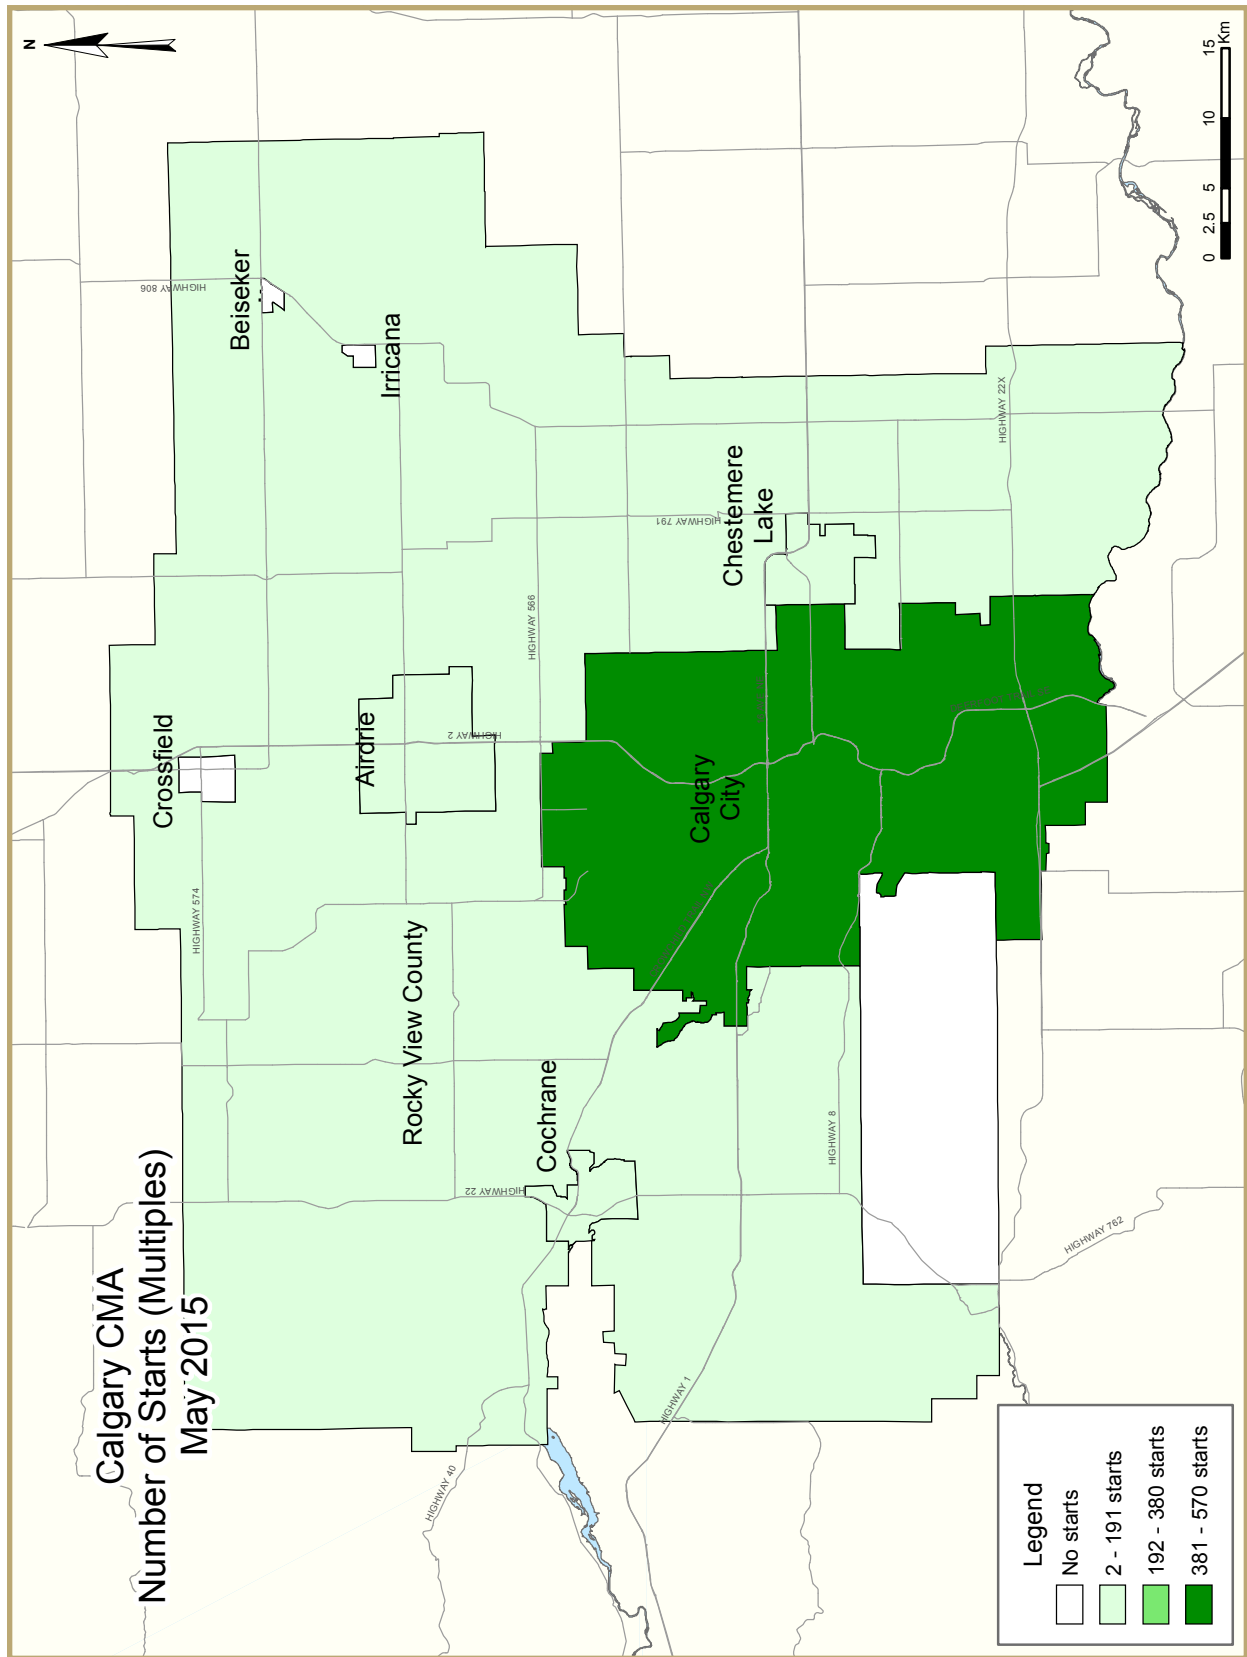

Multi-family starts, which include semi-detached units, rows, and apartments, totalled 759 units in May 2015, up 79 per cent from 424 units in May 2014. The increase was due to a higher number of apartment units breaking ground, while semi-detached and row units declined from the previous year. There were 457 apartment units that started construction in May compared to 64 in the same month in 2014. Approximately half of the apartment starts were rental units. After the first five months, multi-family starts reached 3,151 units in 2015, down from 4,191 in 2014.

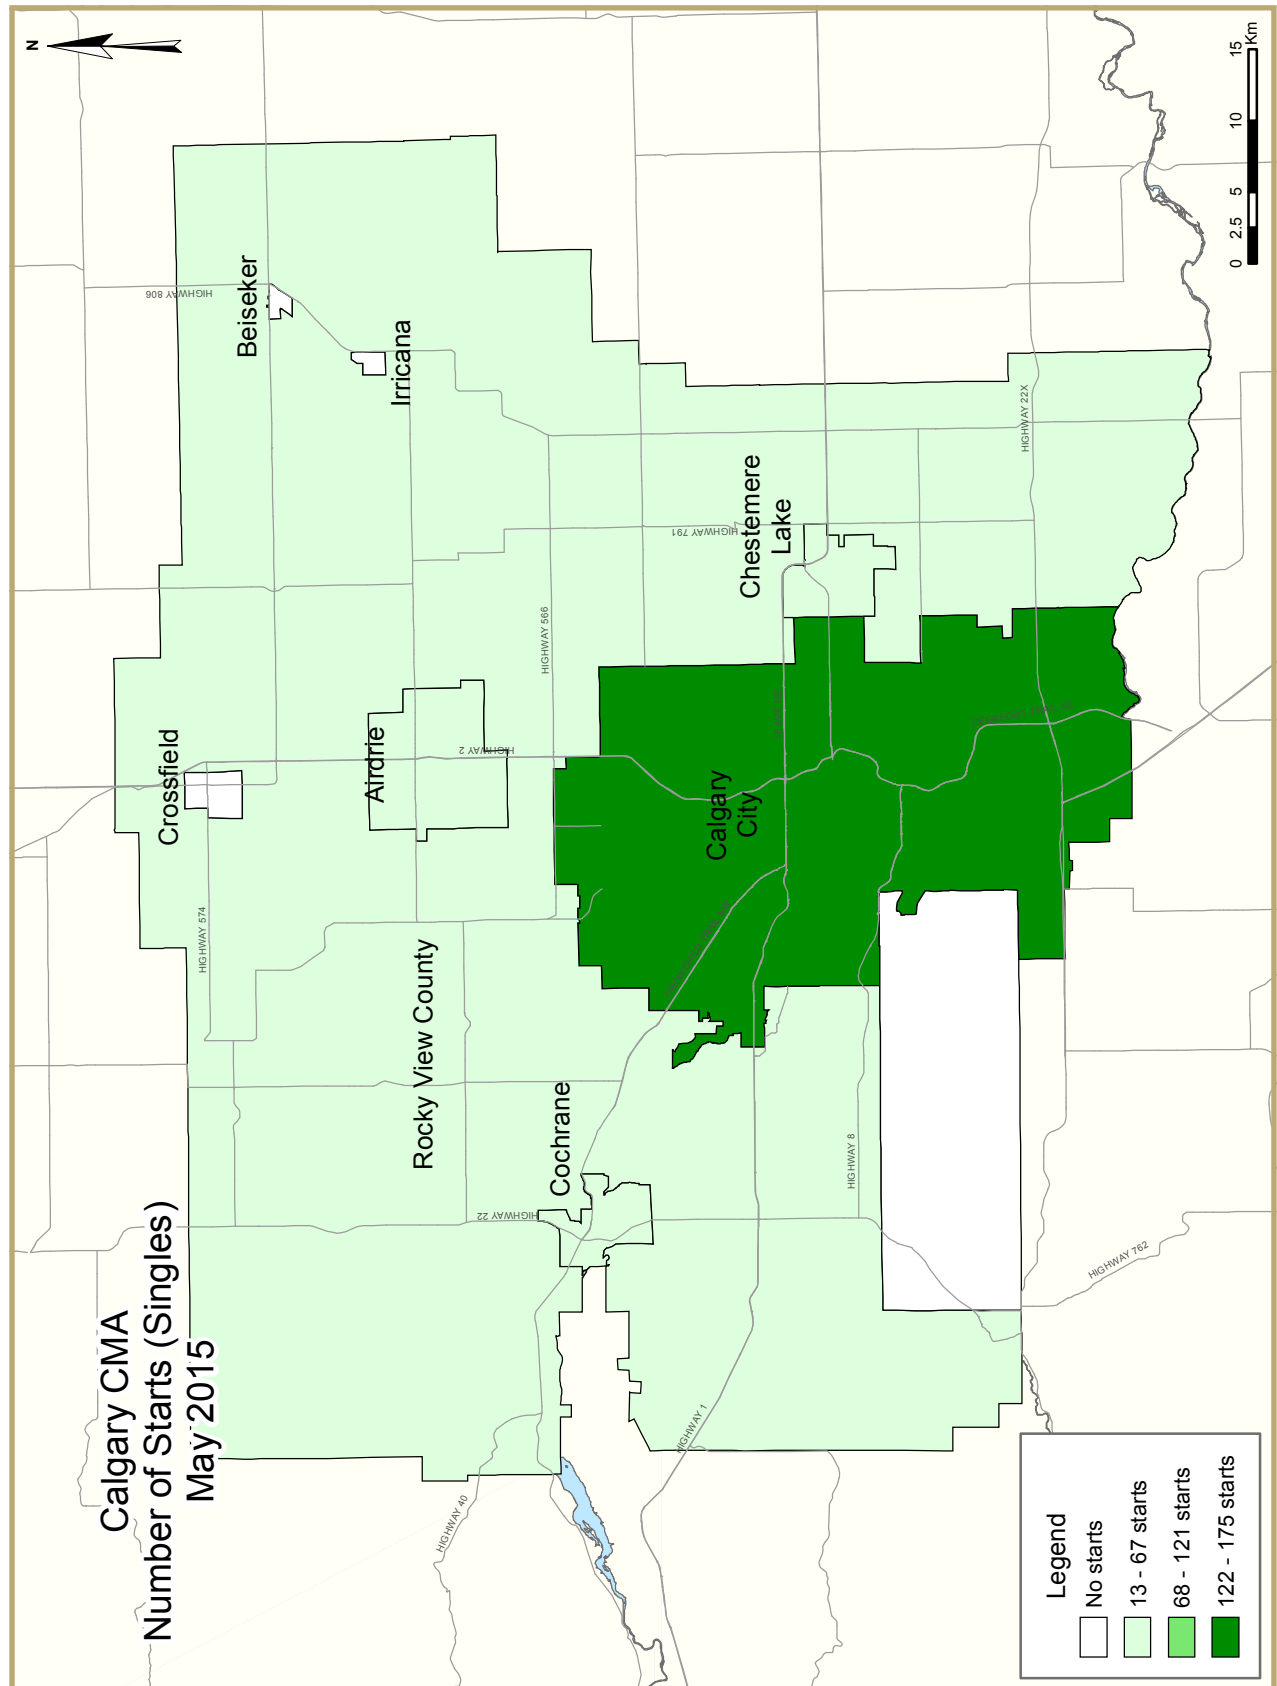

The inventory of multi-family units for ownership tenure in May 2015 was at 162 units, up from 78 units in May 2014. Multi-family inventories have been facing some upward pressure as the number of units under construction has been elevated. For all tenure types, there were 11,296 multi-family units underway in May, a 30 per cent increase from 8,664 units in the same month a year prior. The majority of the units under construction in May were apartment units which totalled 8,331 units, up 46 per cent from May 2014.

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
