

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: February 2015

Highlights

- Actual housing starts increase in January
- Average absorbed price of single-detached homes slips
- Multi-family housing starts at highest level since June 1982

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Total housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 16,727 units in January compared to 14,705 in December. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA rose to 1,832 units in January, up from 776 in the same month of 2014. The majority of the increase was due to higher multi-family housing starts, although the single-detached segment of the market also recorded an increase.

Foundations were poured on 446 single-detached homes in January, a 15 per cent increase from the 388 started in the same month one year prior. Within Edmonton city limits, single-detached starts were up six per cent year-over-year. Growth in this segment of the market has been supported by low inventory, employment gains and relatively low mortgage rates.

Completions of single-detached homes totalled 419 in January, 15 per cent higher than in the same month of 2014. Absorptions also moved higher in January, rising to 427 from 403 units one year prior. This resulted in a decline in the number of new single-detached homes in inventory. There were 514 single-detached homes in inventory in January, 11 per cent lower than in the same month of 2014. The decline was due to fewer spec units in inventory. Show homes, by contrast, were up four per cent year-over-year in January to 217 units.

The average absorbed price for a single-detached home in the Edmonton CMA slipped one per cent to \$556,472 in January, down

Figure 2

Source: CMHC

from \$562,354 in the same month of 2014. Although the average price moved lower, the proportion of more expensive homes sold increased. Homes priced over the \$700,000 mark accounted for 13 per cent of absorptions, up from 10 per cent in the same month of 2014. The median absorbed price for single-detached homes increased 2.9 per cent in January to \$500,600.

Multi-family starts in the Edmonton CMA, which include semi-detached, row, and apartment units, reached 1,386 units in January, up from 388 in the same period of 2014. This was the highest monthly level of multi-family starts since June 1982. Increases were posted across all unit types, however, the gain was most pronounced amongst apartments. There were

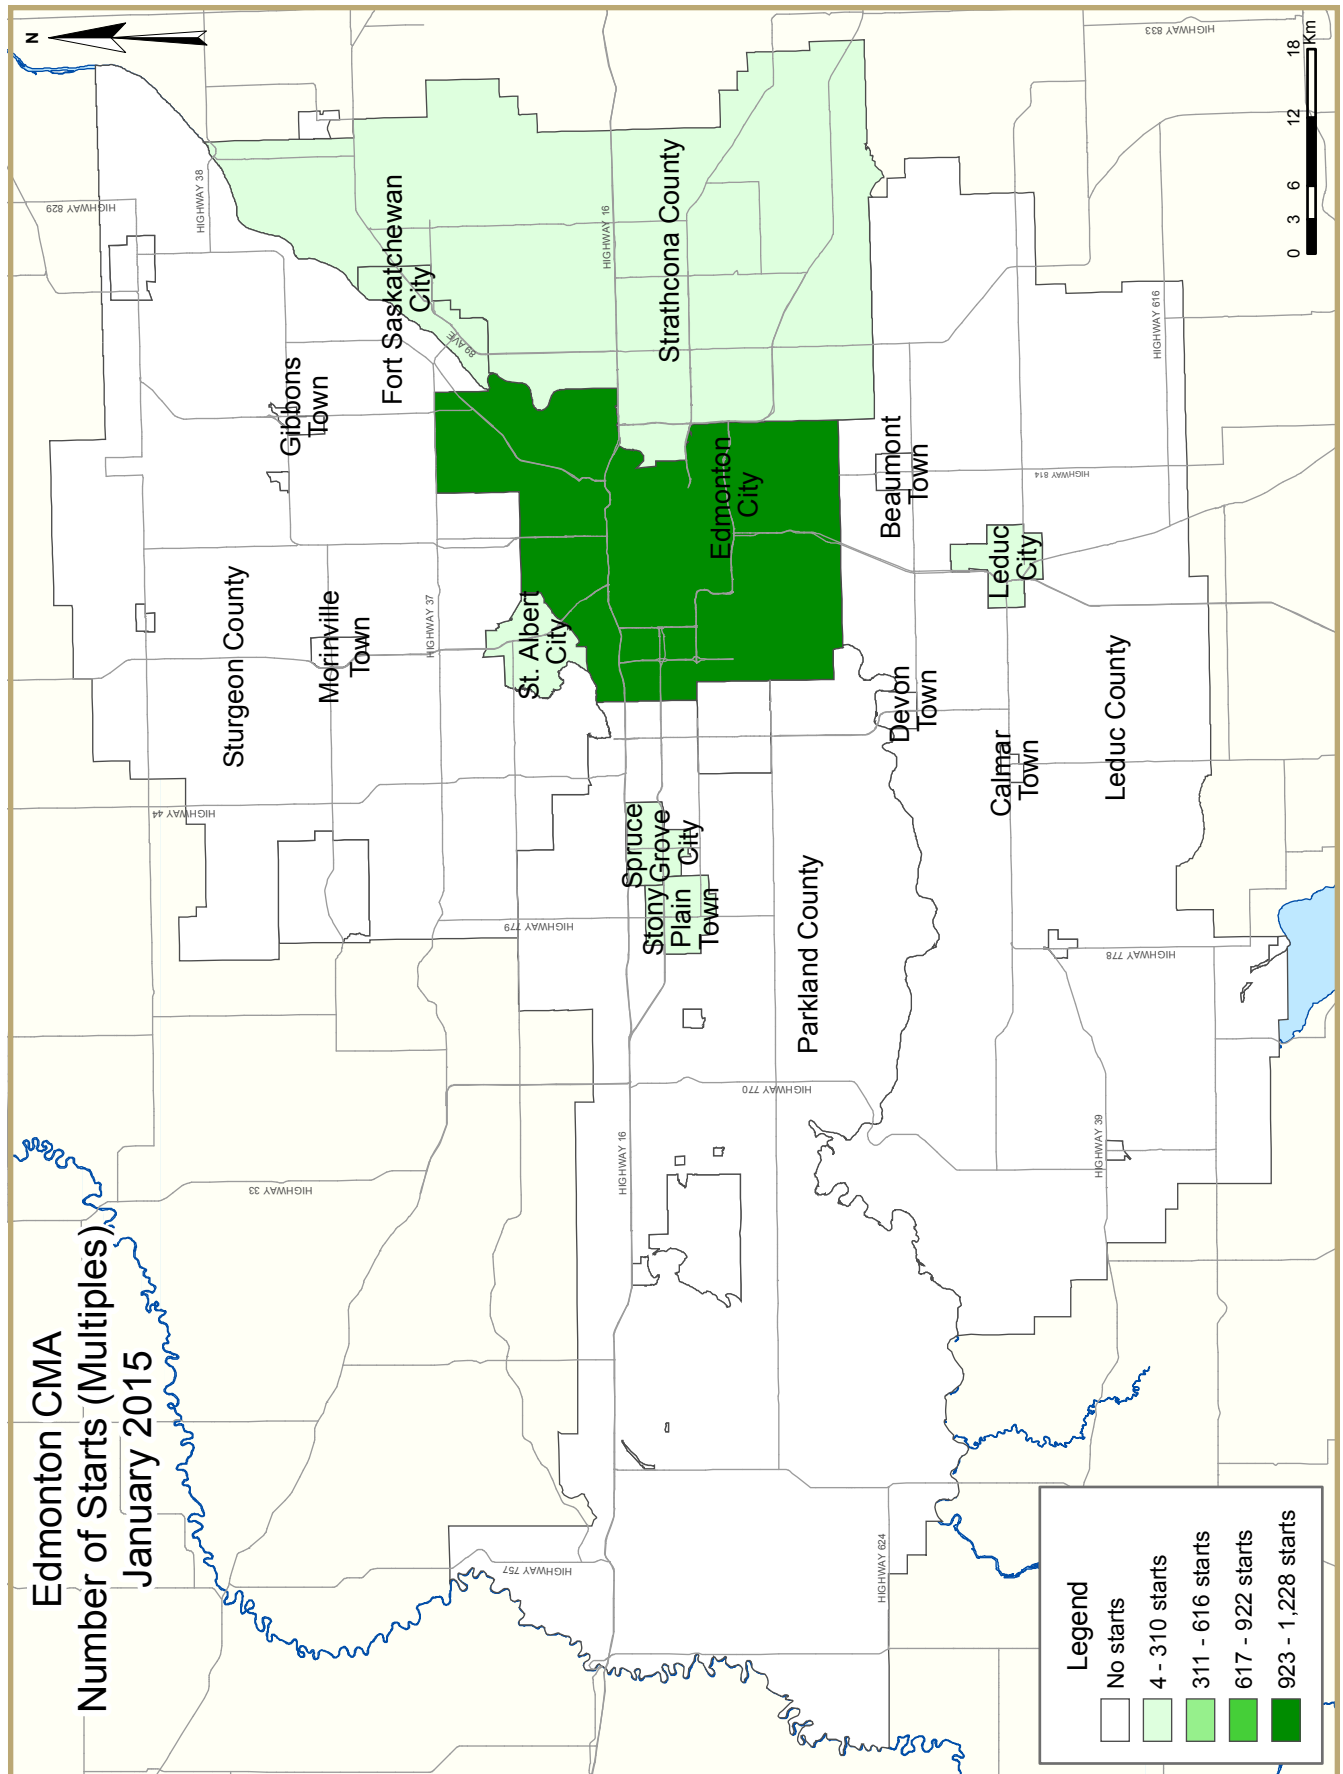

Figure 3

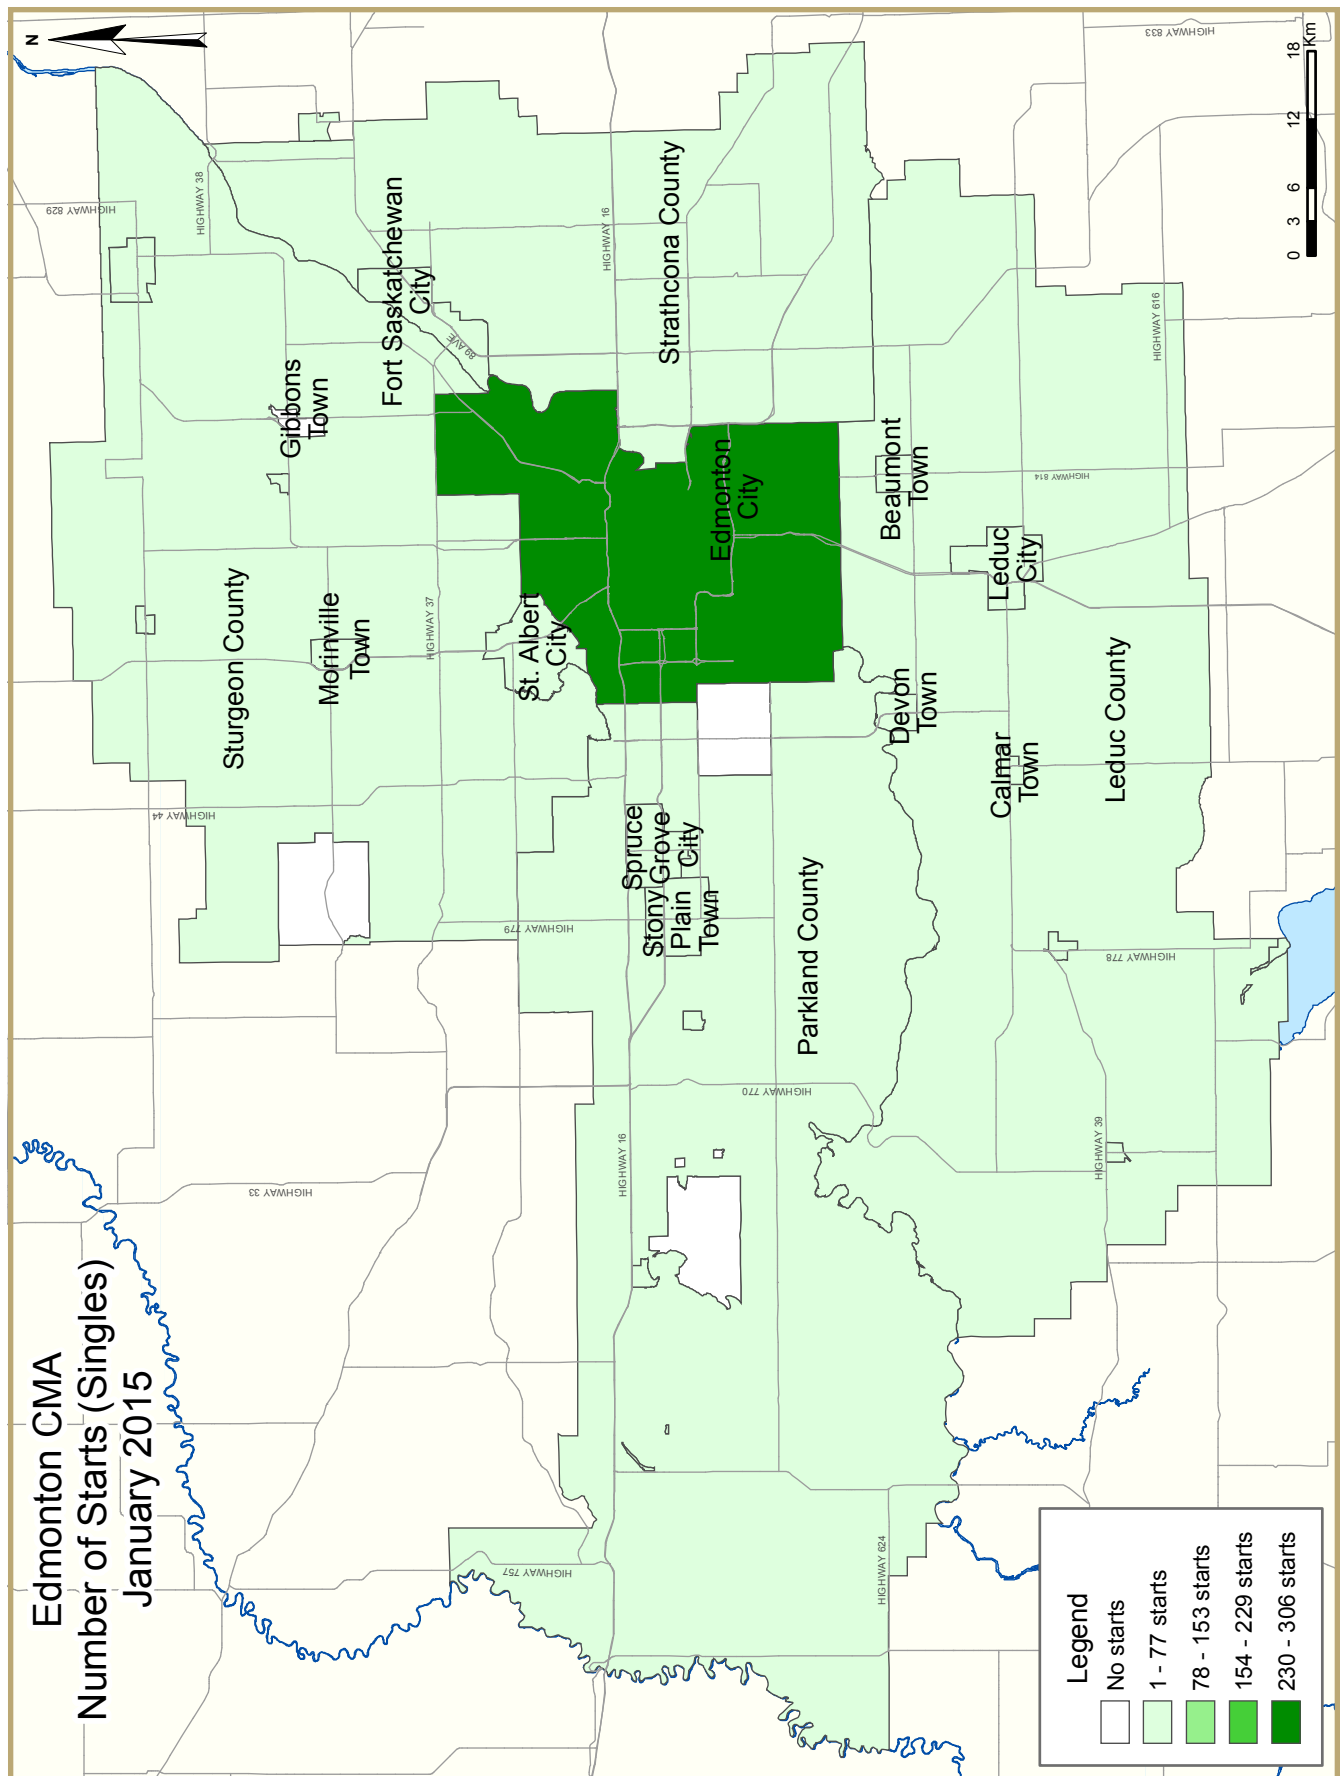

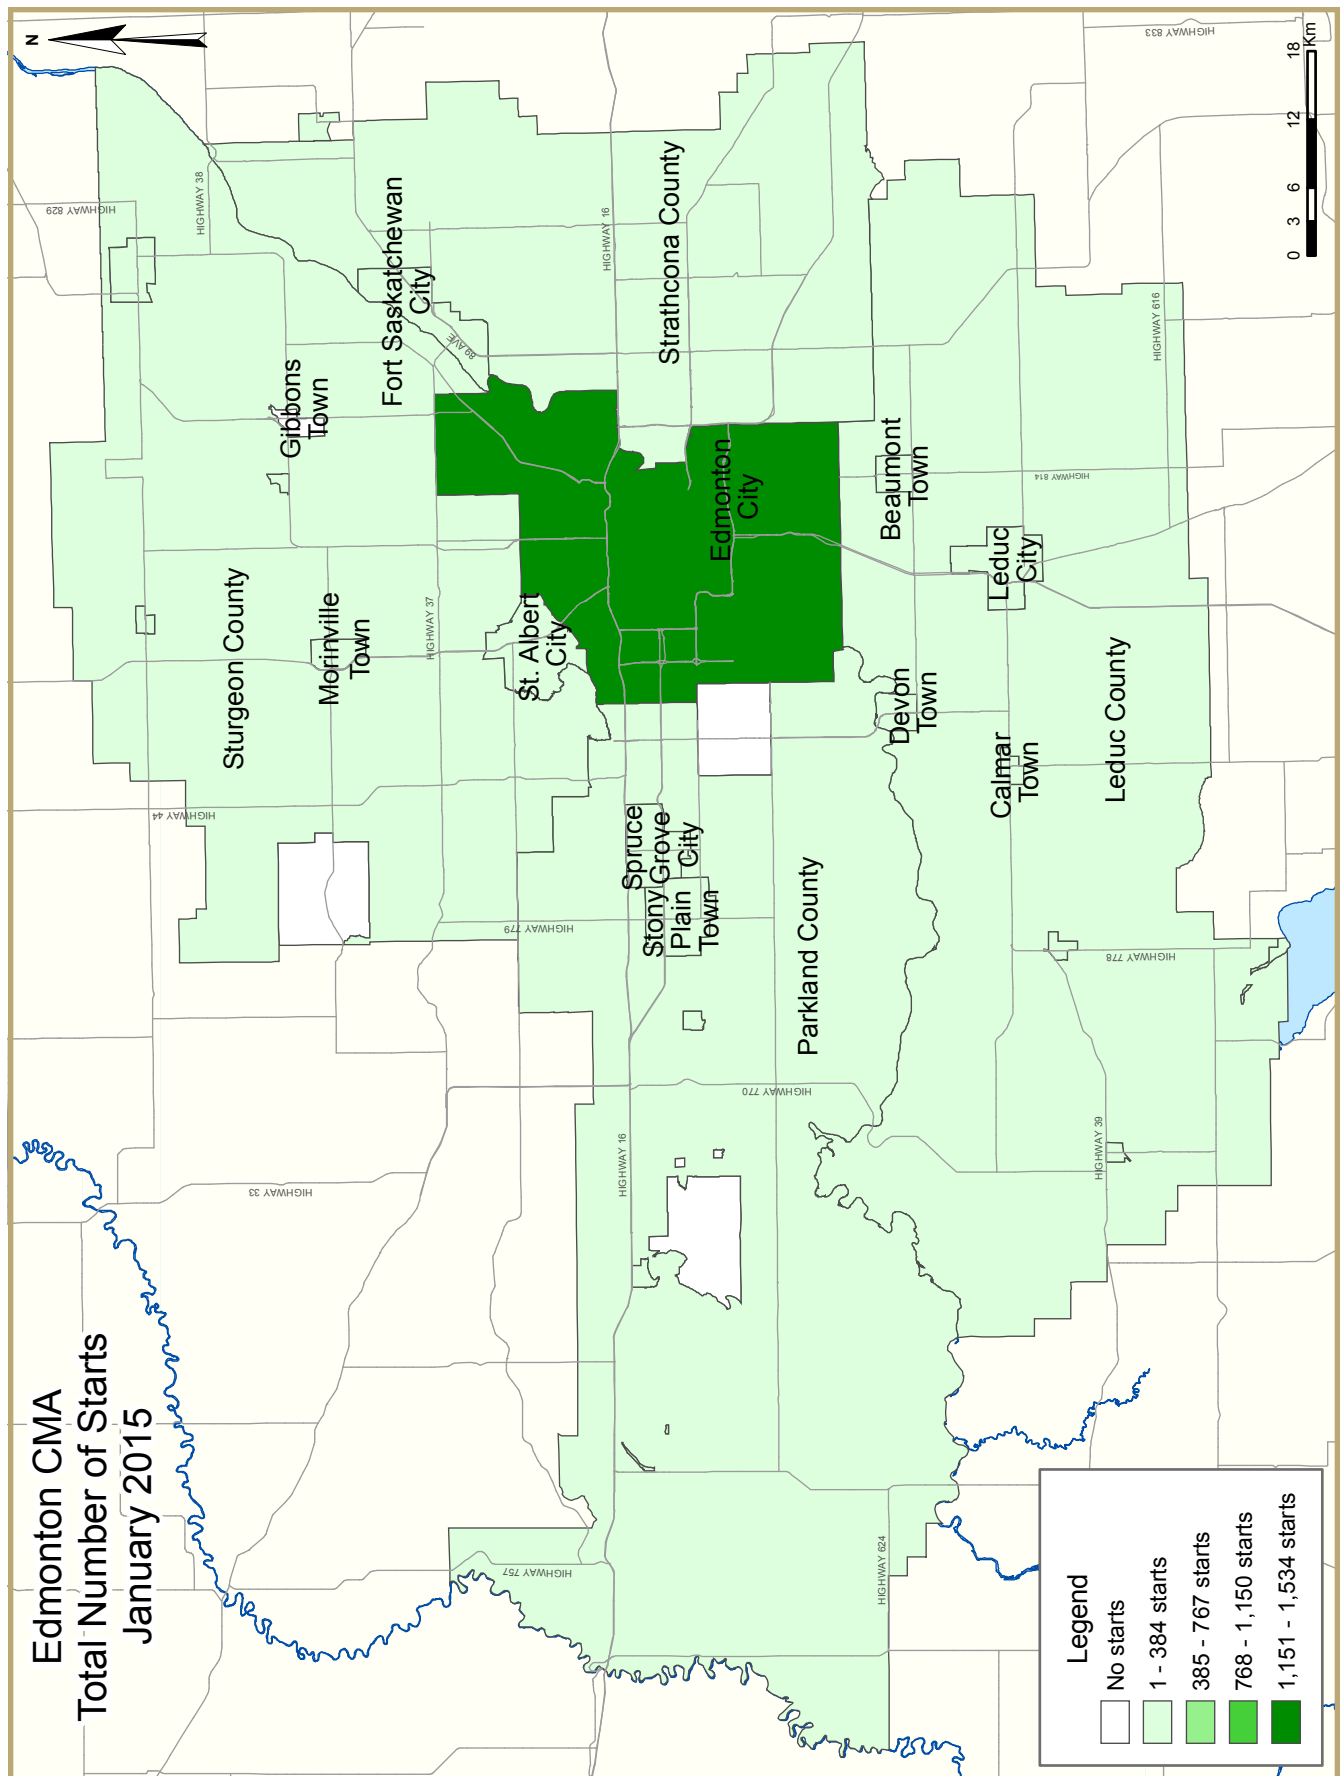

Source: CMHC

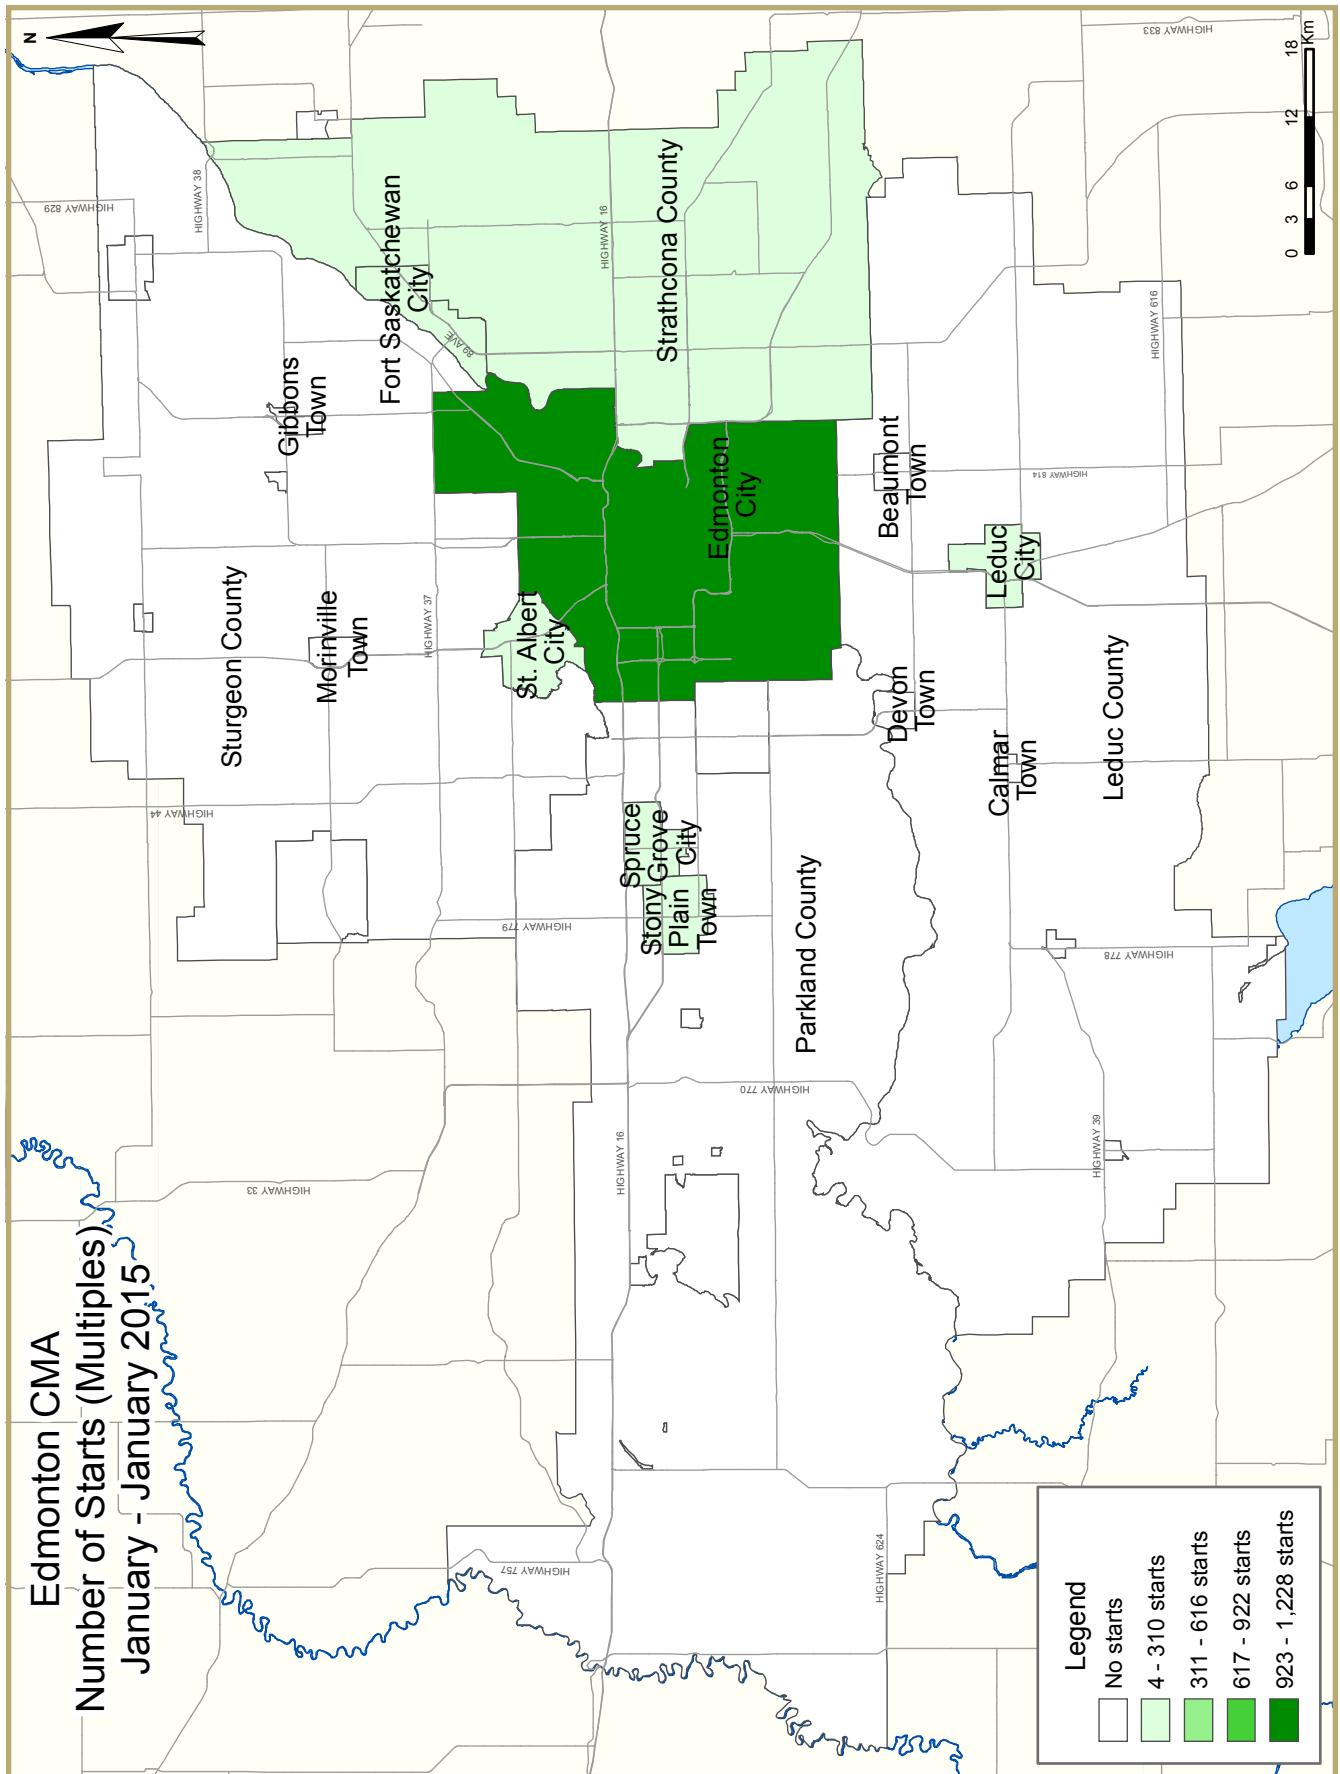

1,151 apartment starts in January, up from 235 in the same month of 2014. Of these 1,151 apartment starts, 750 were rental starts. A low vacancy rate, rising rents and elevated migration are supporting demand for rental units in Edmonton. Within the City of Edmonton, multi-family housing starts reached 1,047 units, up from 344 in the same month of 2014.

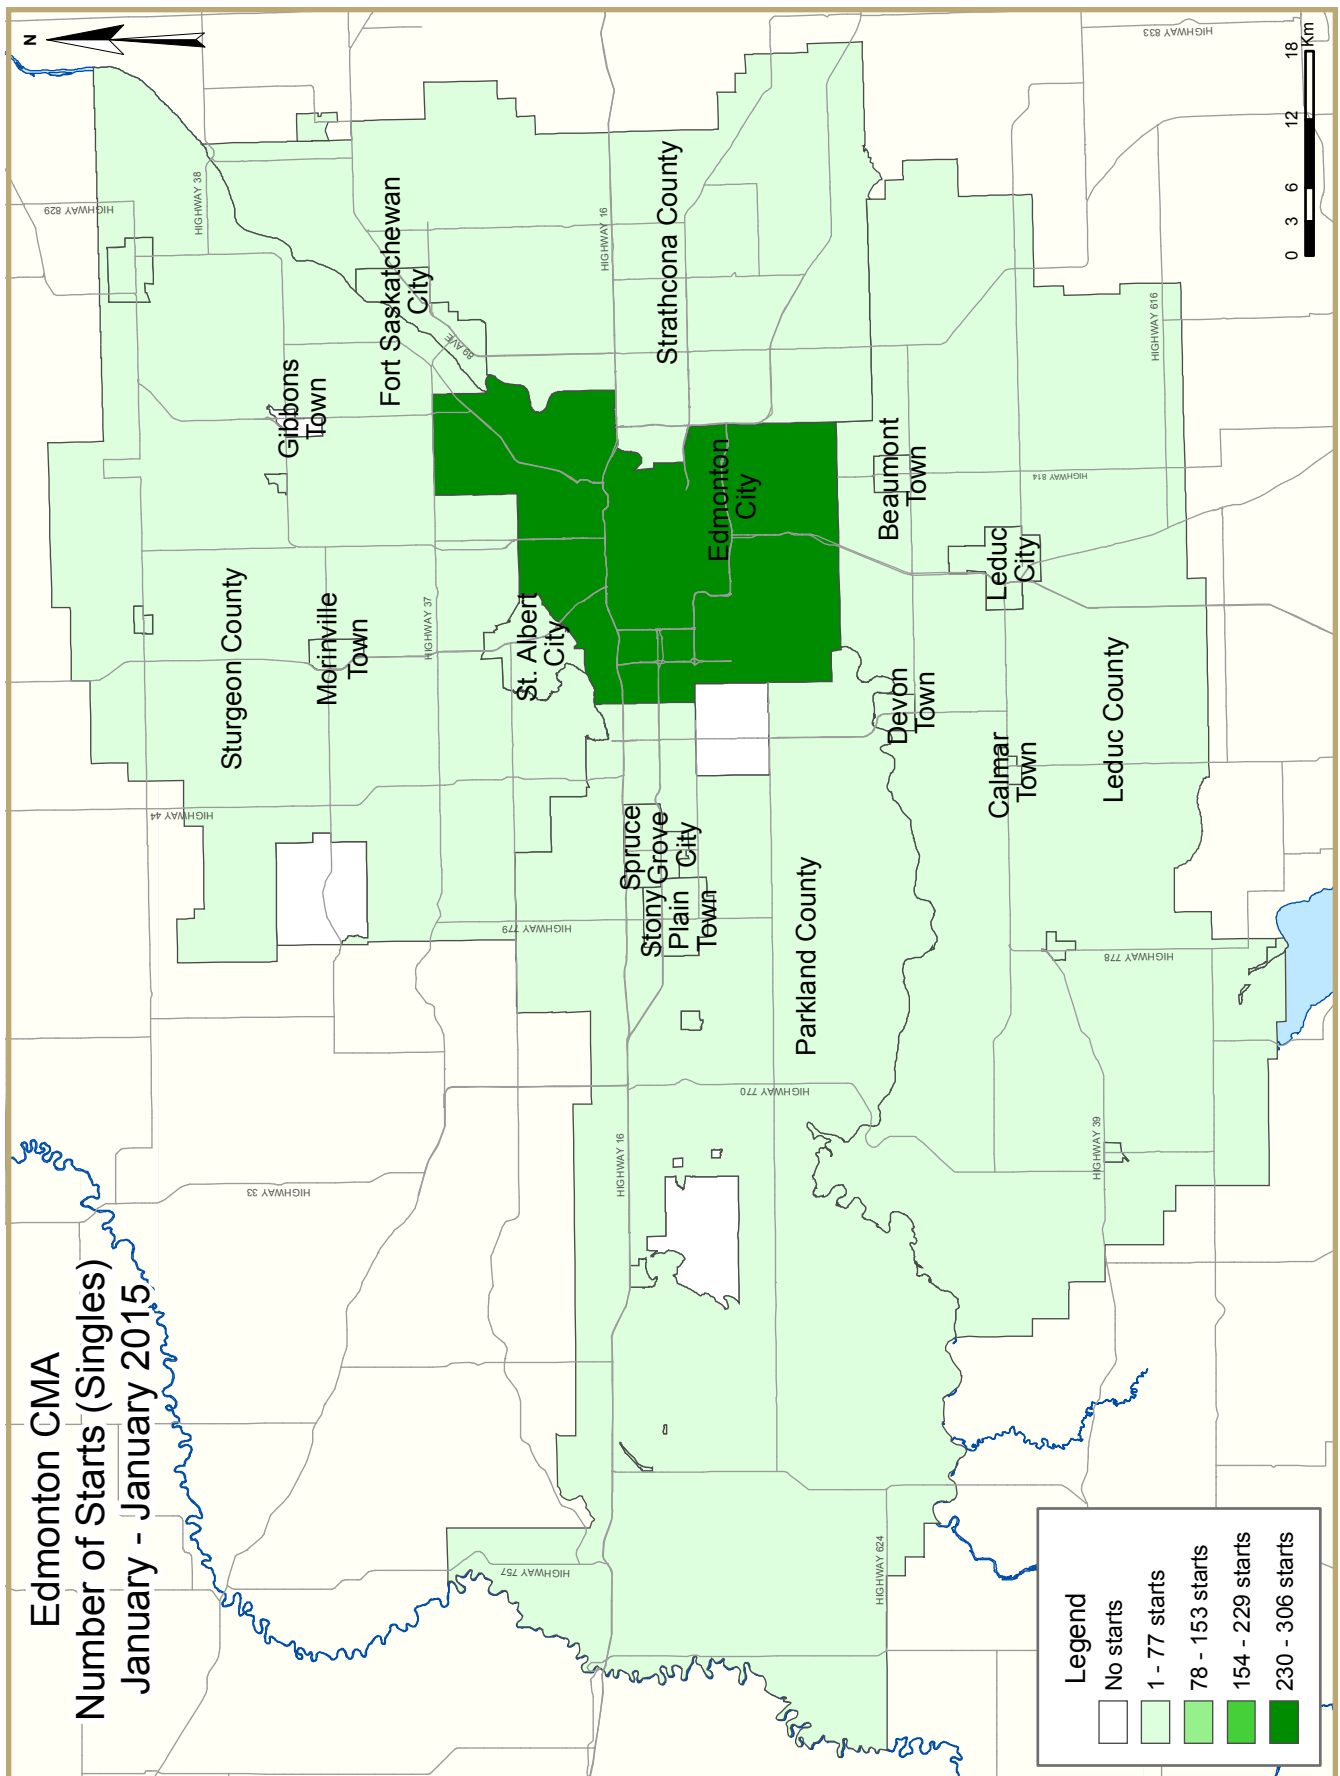

The gain in housing starts in January pushed the number of multi-family units under construction higher. There were 11,122 multi-family units under construction in January, 19 per cent higher than one year prior and the highest level in over thirty years. Completions, by contrast, were down 61 per cent year-over-year in January to 300, largely due to fewer apartment completions. This led to fewer absorptions in the multi-family segment, as 259 units were absorbed, down from 494 in the same month of 2014. Inventory of ownership units also declined on a year-over-year basis, to 460. Inventory is expected to move higher in 2015 and 2016 as the relatively high number of units under construction move to completion.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
