

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: April 2015

Highlights

- Actual housing starts increase in March
- MLS® sales decline in the first quarter of 2015
- Employment growth slows but remains positive in the first quarter

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 19,489 units in March compared to 18,334 in February. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

For the third consecutive month, actual housing starts for the Edmonton CMA increased on a year-over-year basis in March. There were a total of 1,727 housing starts recorded in March, more than double the 752 total units started in the same month of 2014. While both single-detached and multi-family starts moved higher, activity in the multi-family segment of the market accounted for the majority of the increase.

Single-detached housing starts in the Edmonton CMA were up 11 per cent to 477 units in March, compared to 429 in the same month one year prior. Within Edmonton city limits, foundations were poured on 352 units, up 15 per cent year-over-year. On a year-to-date basis, housing starts increased nine per cent in the first quarter of 2015, compared to the same quarter of 2014. Relatively low inventory in the new home market has contributed to strength in this market over the past six months. However, softer economic conditions are expected to slow the pace of housing starts in the single-detached segment in the remaining months of 2015.

Builders completed 696 single-detached homes in March, 64 per cent more than the number of homes completed one year prior. This led to higher absorptions in March, with 666 single-detached homes being absorbed, up from 415 in March 2014. However, with completions

Figure 2

Source: CMHC

outpacing absorptions, the number of single-detached homes in inventory increased from 562 in February to 592 in March. Despite the uptick in inventory, levels were still below the 674 complete and unabsorbed single-detached homes in inventory in March 2014.

The average absorbed price for a single-detached home was \$587,116 in March, up four per cent from one year prior. The increase was attributable in part to a higher proportion of more expensive homes being sold. Homes priced above \$700,000 accounted for 18 per cent of absorptions in March, up from 12 per cent in the same month a year prior. On a year-to-date basis, the average absorbed price was \$587,331 in the first quarter of 2015, up 4.1 per cent from the same period of 2014.

Multi-family starts, which consist of semi-detached, row, and apartment units, continued to post strong gains in March. Multi-family starts totalled 1,250 units, up from 323 in the same month one year prior. While semi-detached units posted a small decline,

both row and apartment starts recorded large gains. On a year-to-date basis, multi-family starts reached 4,083 units in the first quarter of 2015, up from 1,006 in the same period of 2014. Low inventory in the new multi-family market, coupled with a relatively low vacancy rate, has spurred production in this segment. However, a relatively high number of units under construction should slow the pace of multi-family housing starts in the remaining months of 2015.

Gains in multi-family starts in the first three months of 2015 have led to increases in the number of units under construction in the Edmonton CMA. There were 11,985 multi-family units under construction in March, a 29 per cent increase from the same month a year prior. Double-digit increases were recorded across all three segments of the market. Completions of multi-family units also moved higher in March. A total of 876 units were completed, up from 348 in March 2014. Higher completions led to higher absorptions, as 413 units were absorbed in the ownership market, an increase of 31 per cent compared

to one year prior. Inventory of multi-family units for ownership tenure remained relatively low in March at 454, down from 615 in the same month of 2014. However, inventory is expected to slowly increase in the coming months as some of the relatively high number of units under construction move into completion.

Existing Home Market

Residential MLS® sales in Edmonton moved lower in the first quarter of 2015. A total of 3,448 sales were recorded from January to March, 14 per cent lower than in the same quarter of 2014. Slower employment growth and lower consumer confidence brought on by the decline in oil prices have led to a moderation in the demand for resale homes in Edmonton.

Lower demand eased the pace of price growth in the Edmonton market in the first quarter. The average residential price increased 3.6 per cent year-over-year in the first quarter to \$367,093. This growth rate is down from 7.9 per cent in the fourth quarter of 2014 and is also lower than the 4.8 per cent growth rate recorded in the first quarter of 2014.

Figure 3

Source: CREA, Trended by CMHC

New listings continued to increase in the Edmonton market in the first quarter of 2015, and the pace of growth moved higher. New listings reached 8,931 units in the first quarter, up 21 per cent from the same period one year prior. This stronger growth led to the first year-over-year increase in active listings in the Edmonton market since 2011. An average of 5,028 homes were listed on the MLS® market from January to March, 27 per cent higher than in the corresponding quarter of 2014.

Slower sales activity, coupled with an increased selection of homes entering the market, led to a decline in the sales-to-new listings ratio. The ratio averaged 38.6 per cent in the first quarter of 2015, down from 53.8 per cent in the same quarter one year prior. This also marks the lowest level for the ratio since 2008 and infers that buyers in Edmonton's market may be gaining an advantage.

Economy at a Glance

Employment growth slowed in the first quarter of 2015, posting an increase of 1.2 per cent year-over-year. While both the number of full-time and part-time positions increased, the pace of growth was stronger in the part-time sector at 2.7 per cent year-over-year. Full-time job growth amounted to 0.9 per cent, or 5,200 new jobs.

Although job creation remained positive in the first quarter, the unemployment rate moved higher. The unemployment rate averaged 5.7 per cent from January to March, up from 4.8 per cent in the same period of 2014. This increase was the result of growth in the labour force, which outpaced employment growth in the first quarter.

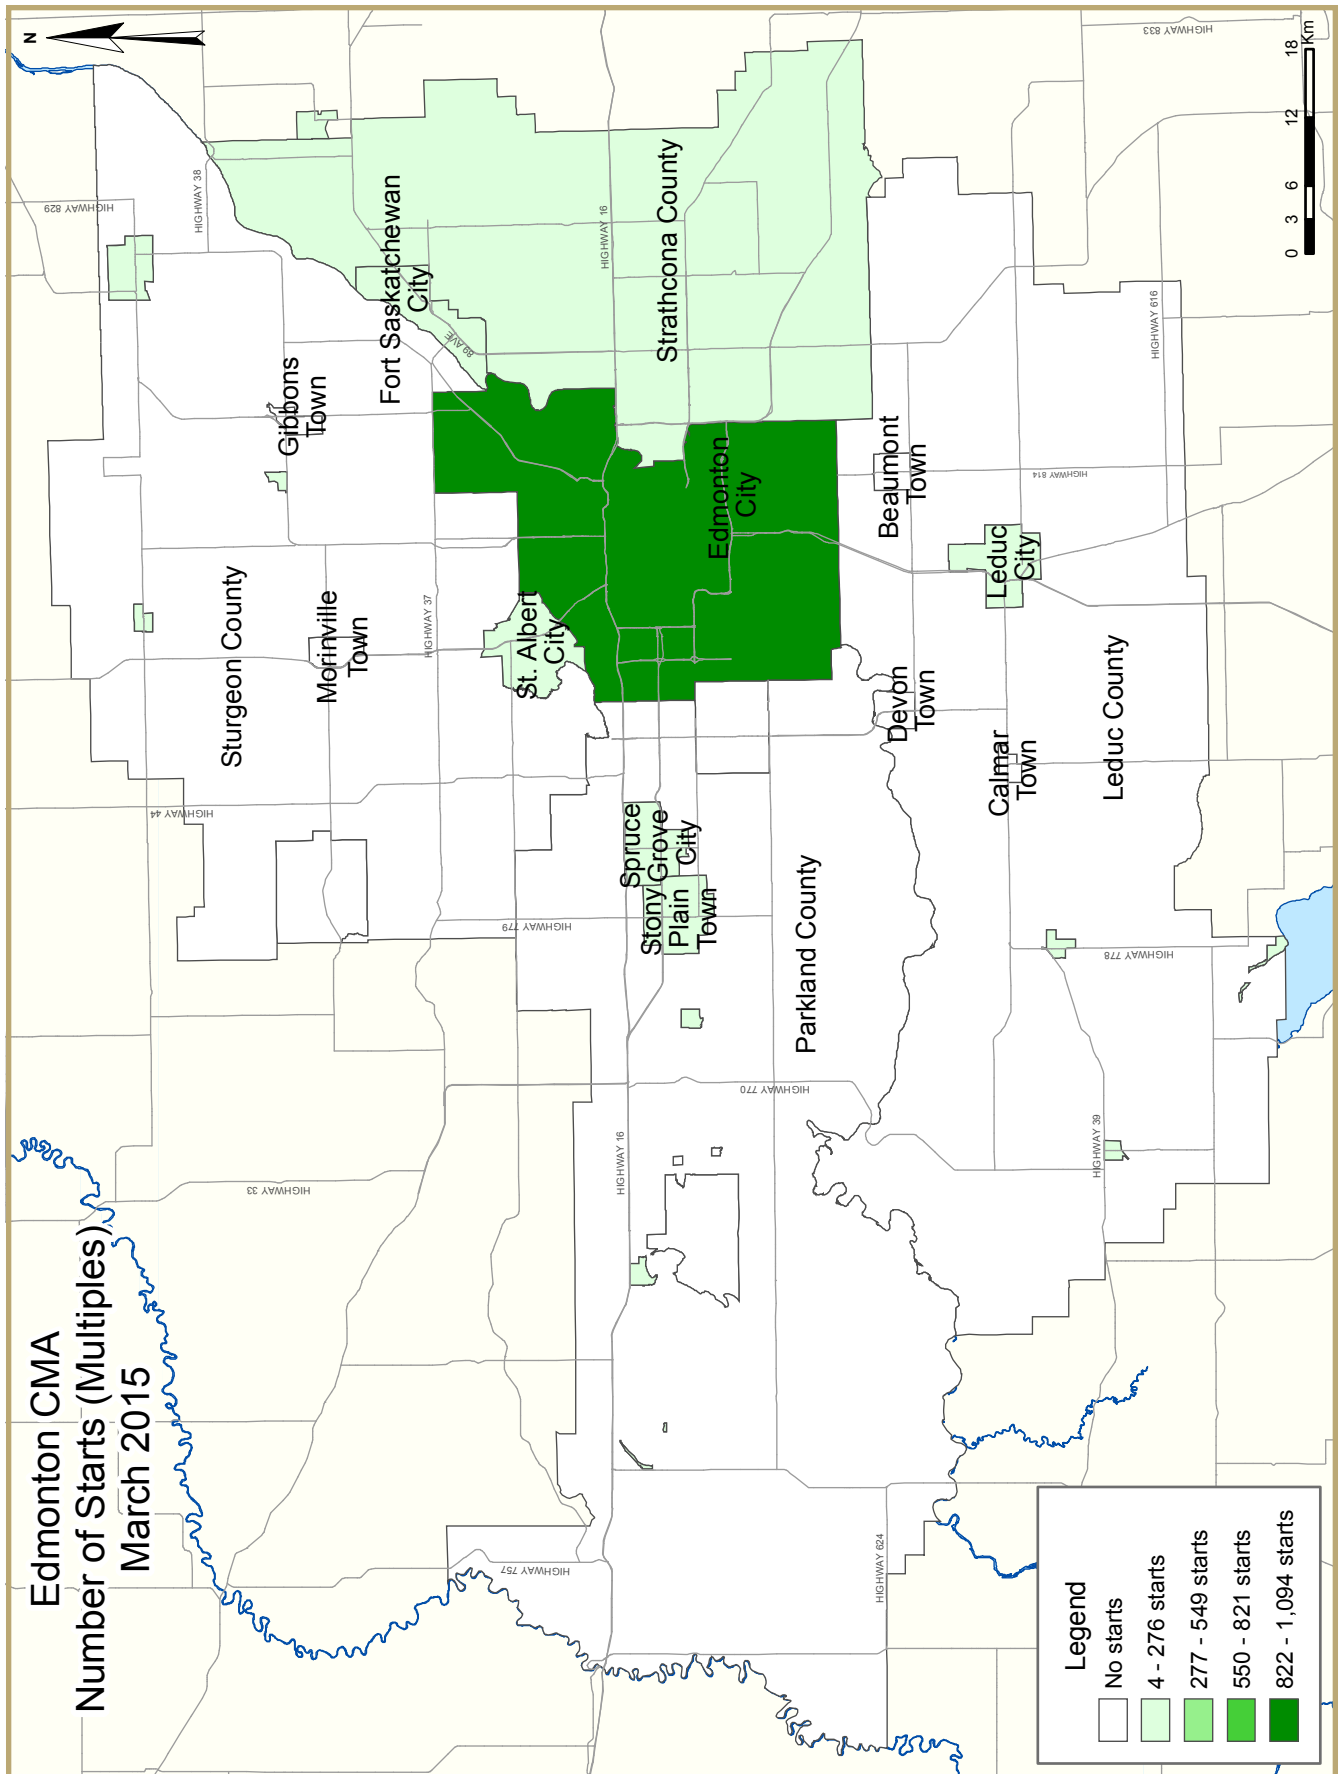

Softer economic conditions and a shift to more part-time jobs led to a decline in average weekly earnings in Edmonton. Weekly earnings averaged \$1,065 in the first quarter of 2015, down from \$1,070 in the same quarter one year prior. Following over ten years of positive growth for earnings, this marks the second quarterly decrease on a year-over-year basis.

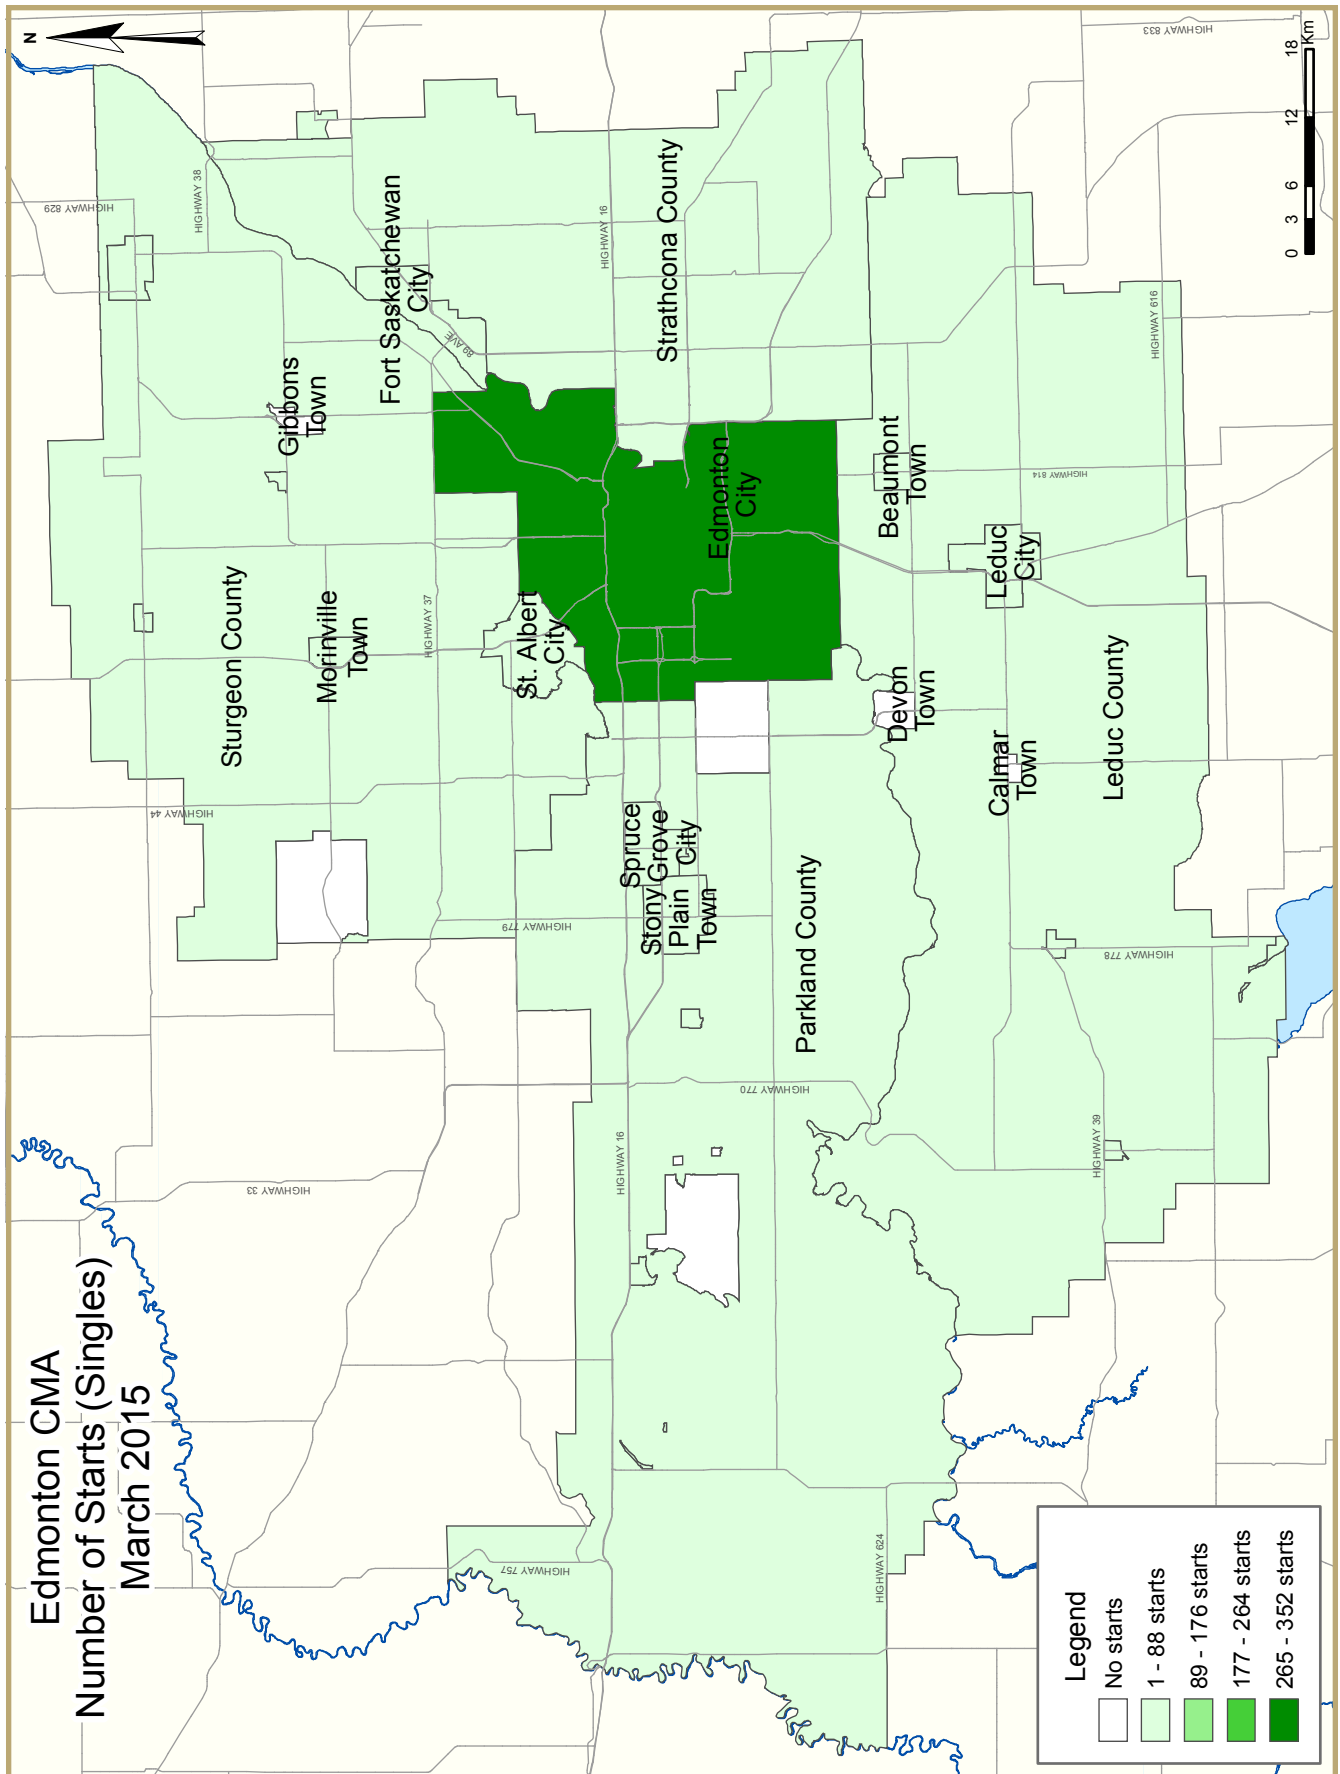

After peaking in 2013, overall net migration to Edmonton declined in 2014. From July 2013 to June 2014, Edmonton welcomed a net 32,507 migrants, down from 34,436 in the preceding twelve months. The decline was attributable to lower non-permanent migration, which fell from 6,328 in 2013 to 2,587 in 2014. Excluding non-permanent residents, international migration increased in 2014, with the net number of migrants rising to 12,438 from 11,057 in 2013. The net number of migrants moving to Edmonton from other Canadian provinces also moved slightly higher, rising three per cent during the same time period.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
