¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Total housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 19,082 units in May compared to 19,614 in April. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA were relatively unchanged in May at 1,213 compared to 1,216 in the same month of 2014. An increase in single-detached starts was offset by a decline in multi-family starts. On a year-to-date basis, total housing starts reached 8,004, up 67 per cent from the 4,786 starts during the same period of 2014.

Single-detached housing starts in the Edmonton CMA increased seven per cent year-over-year in May, totalling 539 units. Within the Edmonton city limits, builders poured foundations for 385 single-detached homes, up seven per cent from the 361 started in the same month of 2014. On a year-to-date basis, single-detached housing starts in the Edmonton CMA were up five per cent, rising to 2,467 from 2,357 in the same five months of 2014. However, with weaker economic conditions and a rising number of units under construction. growth in this segment of the market is expected to dissipate over the remaining months of 2015.

Single-detached completions totalled 598 units in May, up 32 per cent from 453 in May 2014. Despite the increase in completions, the number of units under construction moved higher on a year-over-year basis, to 4,367, up from 4,010 in the same period of 2014. The higher number of completions in May led to a rise in inventory. There were

Source: CMHC

608 completed and unsold singledetached units in inventory in May, up from 601 in the previous month and from 605 in the same month of 2014. This marks the first year-over-year increase in inventory since March 2014. The increase was due to a higher number of show homes, which moved from 227 units in May 2014 to 232 in the same month of 2015. A shift towards higher-end homes continued to push the average single-detached absorbed price up in the Edmonton CMA. The average single-detached absorbed price was \$657,640 in May 2015, up 19.8 per cent from the same month of 2014. Homes priced above \$700,000 accounted for 25 per cent of absorptions, up from 13 per cent

Source: CMHC

in the same period one year prior. After five months of 2015, the average absorbed price for a single-detached home was \$618,184, up 10.7 per cent the same period of 2014.

Following four consecutive months of year-over-year growth, multi-family starts in the Edmonton CMA, which include semi-detached, row, and apartment units, declined five per cent year-over-year in May. Slower employment growth, coupled with an elevated number of units under construction, has begun to put some downward pressure on the multifamily market. There were 674 multifamily starts in May, down from 712 starts one year prior. The decline was attributable to lower apartment starts, while both semi-detached and row starts moved higher. Strength in the early months of 2015 continued to prop up year-to-date multi-family starts, which totalled 5,537 through the first five months of 2015, up from 2,429 in the same period of 2014.

Completions of multi-family units reached 695 units in May, up from 268 in the same month of 2014. This increase led to an uptick in the number of multi-family units in ownership inventory. There were 529 units in inventory in May, up from 464 in April. Despite the rise, inventory was still lower than one year prior when 639 units were in inventory. The number of multi-family units under construction in the Edmonton CMA remained elevated in May at 12,283, 25 per cent higher than in the same month one year prior. As starts activity slows, this number should trend lower in the coming months.

HOUSING NOW REPORT TABLES

Available in ALL reports:

- I Housing Starts (SAAR and Trend)

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
