

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: July 2015

Highlights

- Actual housing starts move lower in June
- MLS® sales continue to decline
- Unemployment rate increases

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 19,235 units in June compared to 19,082 in May. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts for the Edmonton CMA declined 11 per cent in June to 1,337 from 1,504 one year prior. Both single-detached and multi-family starts were down on a year-over-year basis. Strength in the early months of 2015 pushed year-to-date total housing starts to 9,341 units, up 49 per cent over the first six months of 2014.

Single-detached housing starts in the Edmonton CMA were down five per cent in June as builders poured the foundations for 553 units. Within the City of Edmonton 395 single-detached homes were started, three per cent higher than in the same month of 2014. Through the first half of 2015, single-detached housing starts in the Edmonton CMA were up three per cent over the same period of 2014. However, slower employment growth, lower consumer confidence and a larger selection of homes on the resale market is expected to slow activity in the market over the coming months.

Builders completed 623 single-detached homes in June, 21 per cent higher than in the same month of 2014. A pick-up in the number of starts in late 2014 is contributing to higher completions in recent months. Absorptions of single-detached homes also increased, rising to 631 from 565 in the same month of 2014. With absorptions outpacing completions,

Figure 2

Source: CMHC

the number of homes in inventory was down slightly on a month-to-month basis to 600, but was eight per cent higher than inventory in June 2014. Both the number of show homes and spec homes in inventory increased on a year-over-year basis, with show homes rising at a faster pace.

The average absorbed price for a single-detached home was \$589,985 in June, up 12 per cent from one year prior. The increase was attributable in part to a higher proportion of more expensive homes being sold. Homes priced above \$700,000 accounted for 19 per cent of absorptions in June, up from 10 per cent in the same month a year prior. On a year-to-date basis, absorbed prices averaged \$612,857 in the first six months of 2015, up 11.0 per cent from the same period of 2014.

For the second consecutive month multi-family starts, which consist of semi-detached, row, and apartment units, declined in June. Multi-family

starts totalled 784 units, down from 924 in the same month one year prior. All three segments registered a decline in the number of starts, with apartments posting the largest. Strong activity in the market in the early months of 2015 has pushed the number of units under construction higher. This, coupled with softer economic conditions, has started to slow construction of multi-family homes.

Completions of multi-family homes moved up slightly in June to 896 units, up from 883 in the same month of 2014. This helped push the number of absorptions in the ownership market higher, which at 770 was 91 per cent higher than the same month one year prior. As a result, the number of units in inventory on the ownership market moved lower on a year-over-year basis, declining to 551 from 572 in June 2014. Despite the higher number of completions in June the number of units under construction was still up from a year prior, at 12,130 units.

Existing Home Market

Slower employment growth, increased inventory on the new home market and lower consumer confidence led to a decline in the number of residential MLS® sales in Edmonton in the second quarter of 2015. From April to June 6,063 transactions were recorded, down seven per cent from the same period of 2014. This marks the fourth consecutive decline in MLS® sales.

New listings continued to rise above last year's levels in the second quarter. There were 11,185 new listings recorded from April to June, up from 10,689 one year prior. This, combined with lower sales, led to an increased selection of homes on the resale market. Active listings averaged 7,088 in the second quarter, 31 per cent higher than in the same quarter of 2014.

A decline in sales, together with an increase in new listings, moved the sales-to-new listings ratio lower. The ratio averaged 54.2 per cent in the second quarter, down from 61.0 per

Figure 3

Source: CREA, Trended by CMHC

cent during the same three months of 2014. The sales-to-active listings ratio also declined from 39.0 per cent in the second quarter of 2014 to 26.7 per cent a year later. The decline in the two ratios suggests the market has shifted in favour of the buyer.

Fewer sales and a larger selection of homes have slowed the pace of price growth in Edmonton. The average MLS® price was \$375,619 in the second quarter of 2015, up 2.6 per cent from the same period one year prior. Although still positive, this was the slowest rate of growth in price since the fourth quarter of 2013.

Economy at a Glance

Employment growth continued to slow in the second quarter of 2015. Total employment increased 1.0 per cent year-over-year, down from 1.2 per cent in the first quarter of 2015. Growth in full-time positions more than offset a decline in the number of people working part-time. Edmonton's economy added 9,500 full-time jobs from the second quarter of 2014 to the same quarter of 2015.

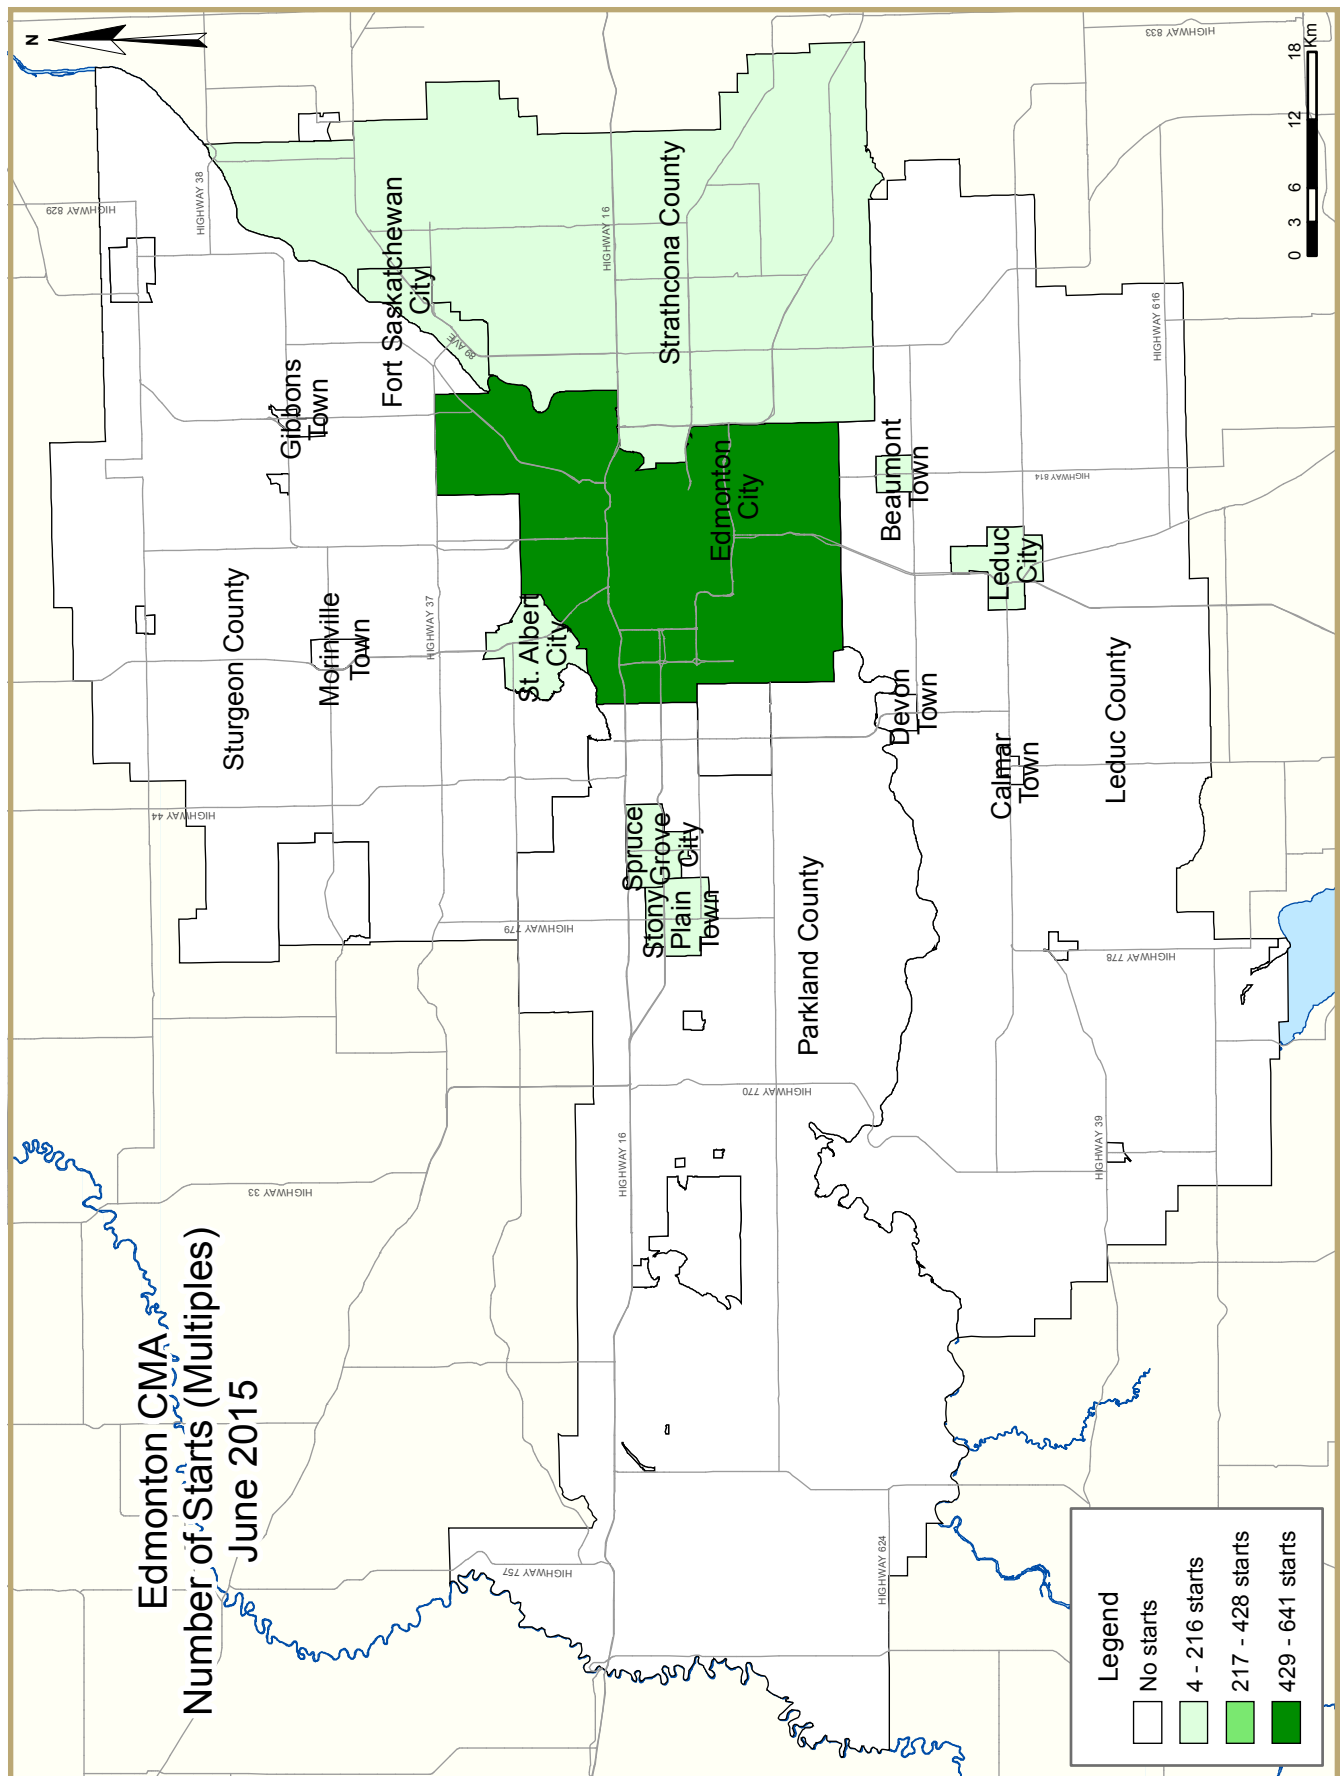

Job growth in Edmonton was not strong enough to prevent the unemployment rate from moving higher, as the number of people in Edmonton's labour force increased at a faster pace than the number of jobs. The unemployment rate averaged 6.2 per cent from April to June, up from 5.7 per cent in the same three months a year prior.

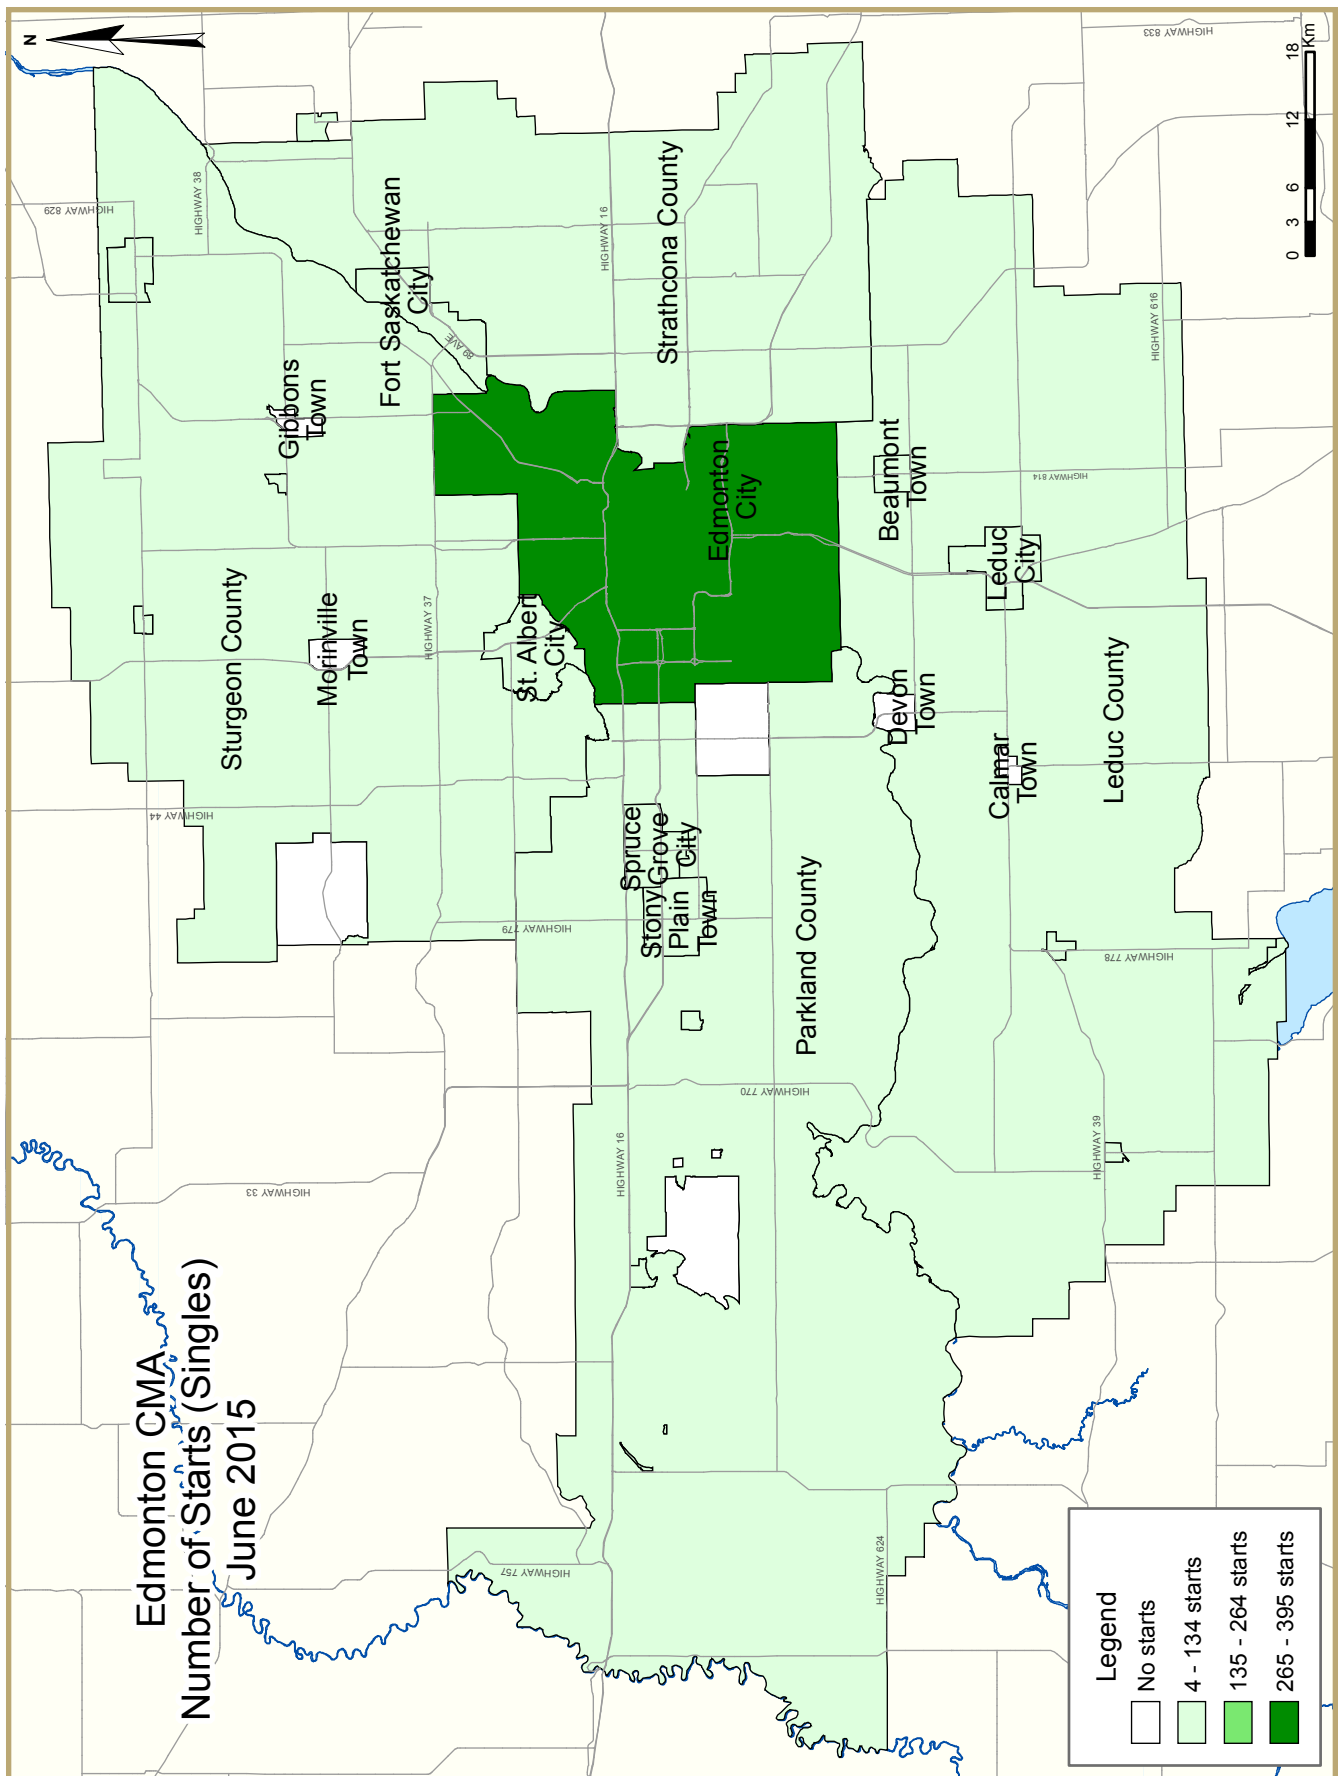

A shift to more full-time positions helped push average weekly earnings up in the Edmonton CMA. Weekly earnings averaged \$1,113 in the second quarter, up 4.2 per cent from the same quarter a year prior.

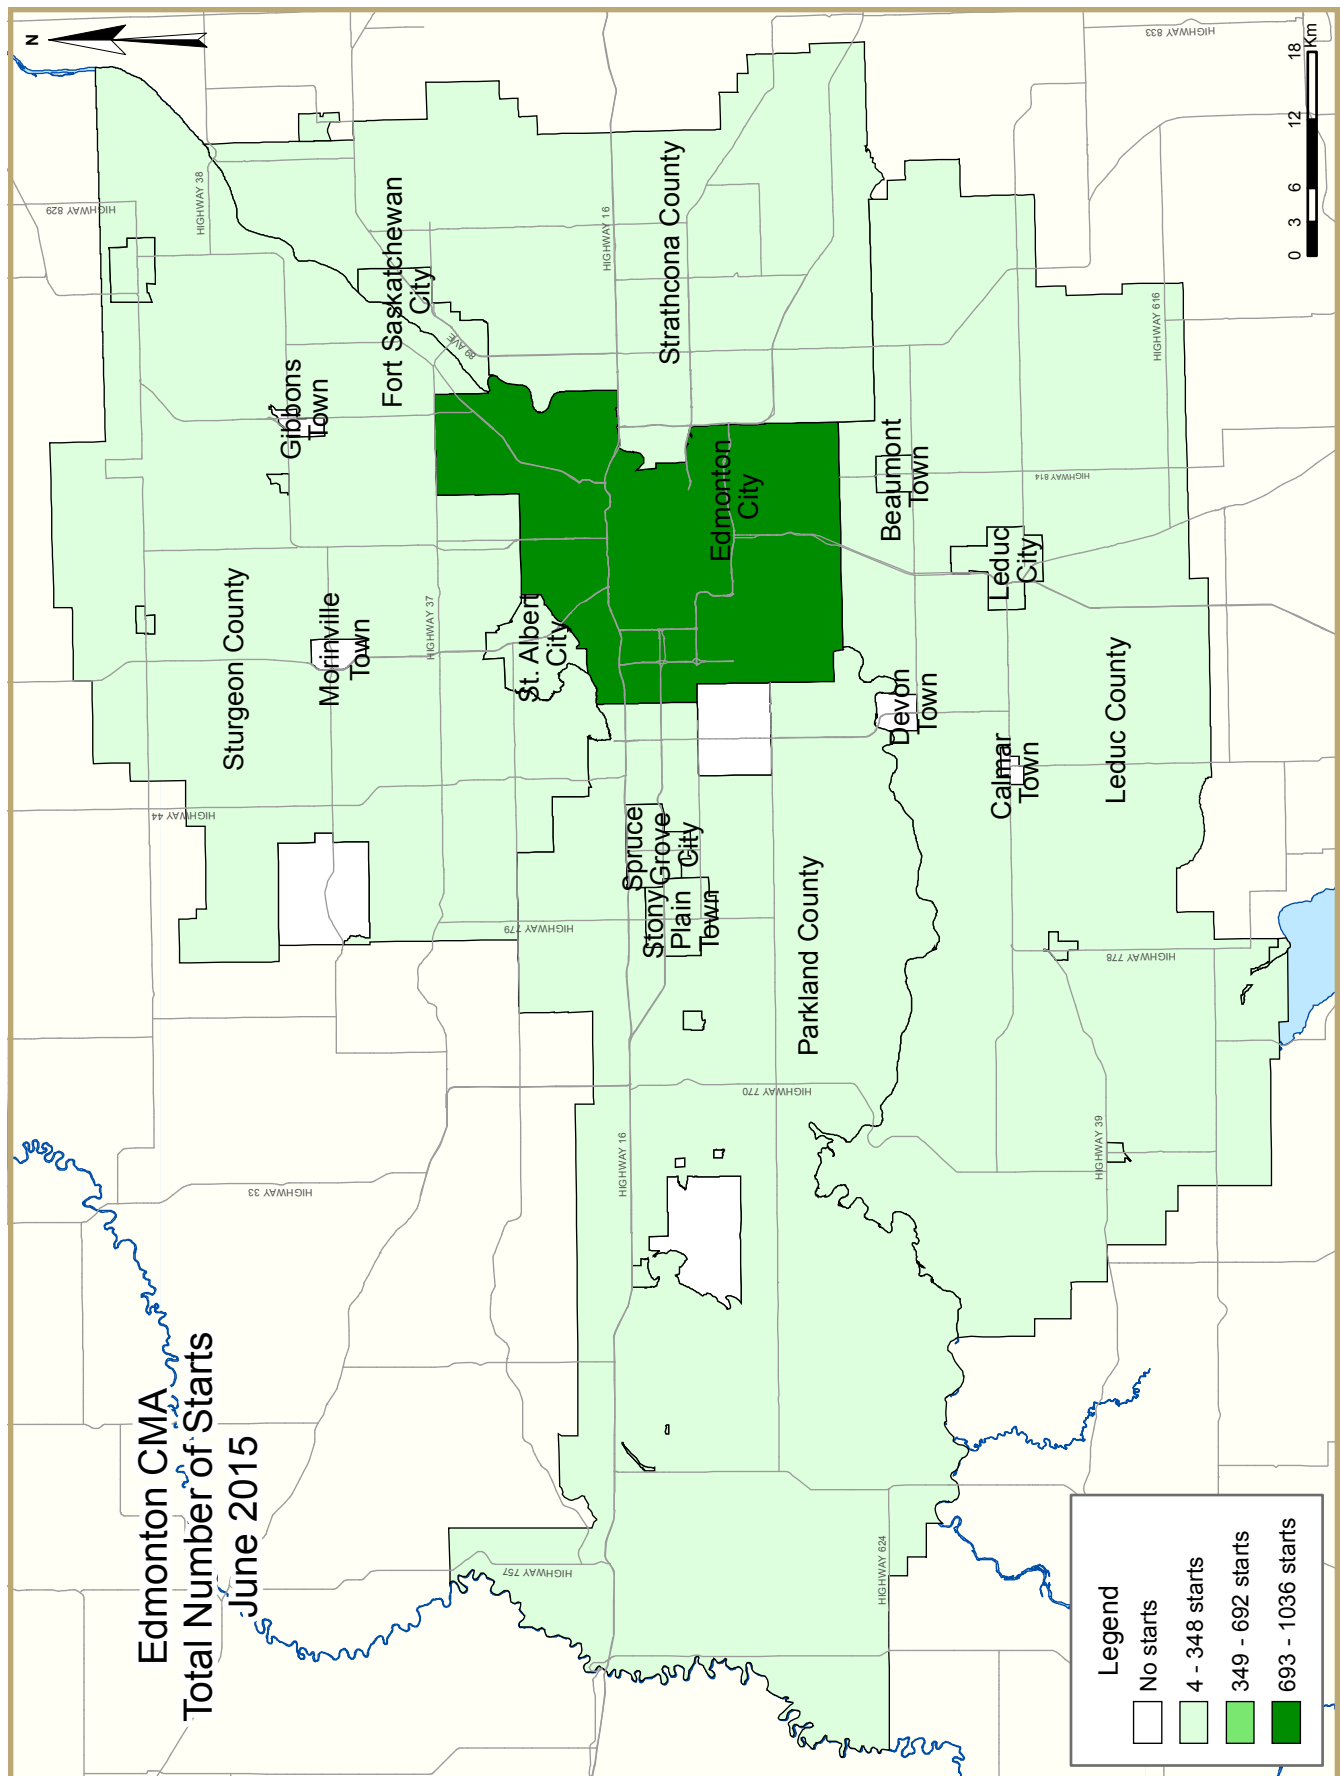

Softer economic conditions have contributed to a decline in the number of people moving to Alberta. In the first quarter of 2015, overall net migration to the province declined 60 per cent year-over-year to 7,723 people. The largest contributor to the decline was non-permanent migration, which accounted for a net loss of 5,896 people. Interprovincial migration remained positive but at 6,732 in the first quarter, was down 30 per cent from the same quarter of 2014. International migration, excluding non-permanent residents, declined 24 per cent to 6,887 from 9,046 in the first quarter of 2014.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
