

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: August 2015

Highlights

- Actual housing starts increase in July
- Single-detached housing starts decline
- Multi-family housing starts move higher

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Total housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 18,504 units in July compared to 19,235 in June. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA increased to 1,725 units, up from 1,126 in the same month of 2014. The increase was a result of higher multi-family starts which more than offset a decline in single-detached starts. After seven months of 2015, total housing starts were up 49 per cent year-over-year to 11,066 units.

For the second consecutive month single-detached housing starts moved lower year-over-year in July. Builders initiated 510 single-family homes in July, down 26 per cent from the 686 starts in the same month of 2014. This marks the largest year-over-year decline in starts since 2011. Within Edmonton city limits, 346 single-detached starts were recorded, down 25 per cent from the 462 starts one year prior. On a year-to-date basis, single-detached housing starts in the Edmonton CMA were down three per cent from 3,623 in the first seven months of 2014 to 3,530 in the same period of 2015. Slower employment growth, coupled with rising inventory in both the new and existing market, has tempered the pace of construction in recent months.

Single-detached completions totalled 679 units in July, up 10 per cent from 615 in July 2014. Absorptions also increased, rising five per cent to 639 up from 606 absorptions in the same

Figure 2

Source: CMHC

month of 2014. With completions outpacing absorptions, inventory moved higher. There were 640 single-detached homes in inventory, up from 566 in July 2014. This represents the highest single-detached inventory level since early 2014. Both spec and show homes contributed to the rise in the inventory, with each up 13 per cent year-over-year.

The average single-detached absorbed price in the Edmonton CMA was \$577,505 in July 2015, up 3.0 per cent from the same month of 2014. The increase was attributable to a higher proportion of more expensive homes being sold. Homes priced above \$600,000 accounted for 31 per cent of absorptions, up from 27 per cent in the same period one year prior. After seven months of 2015, the average absorbed price for a single-detached home was \$607,171, up from \$553,825 in the same period of 2014.

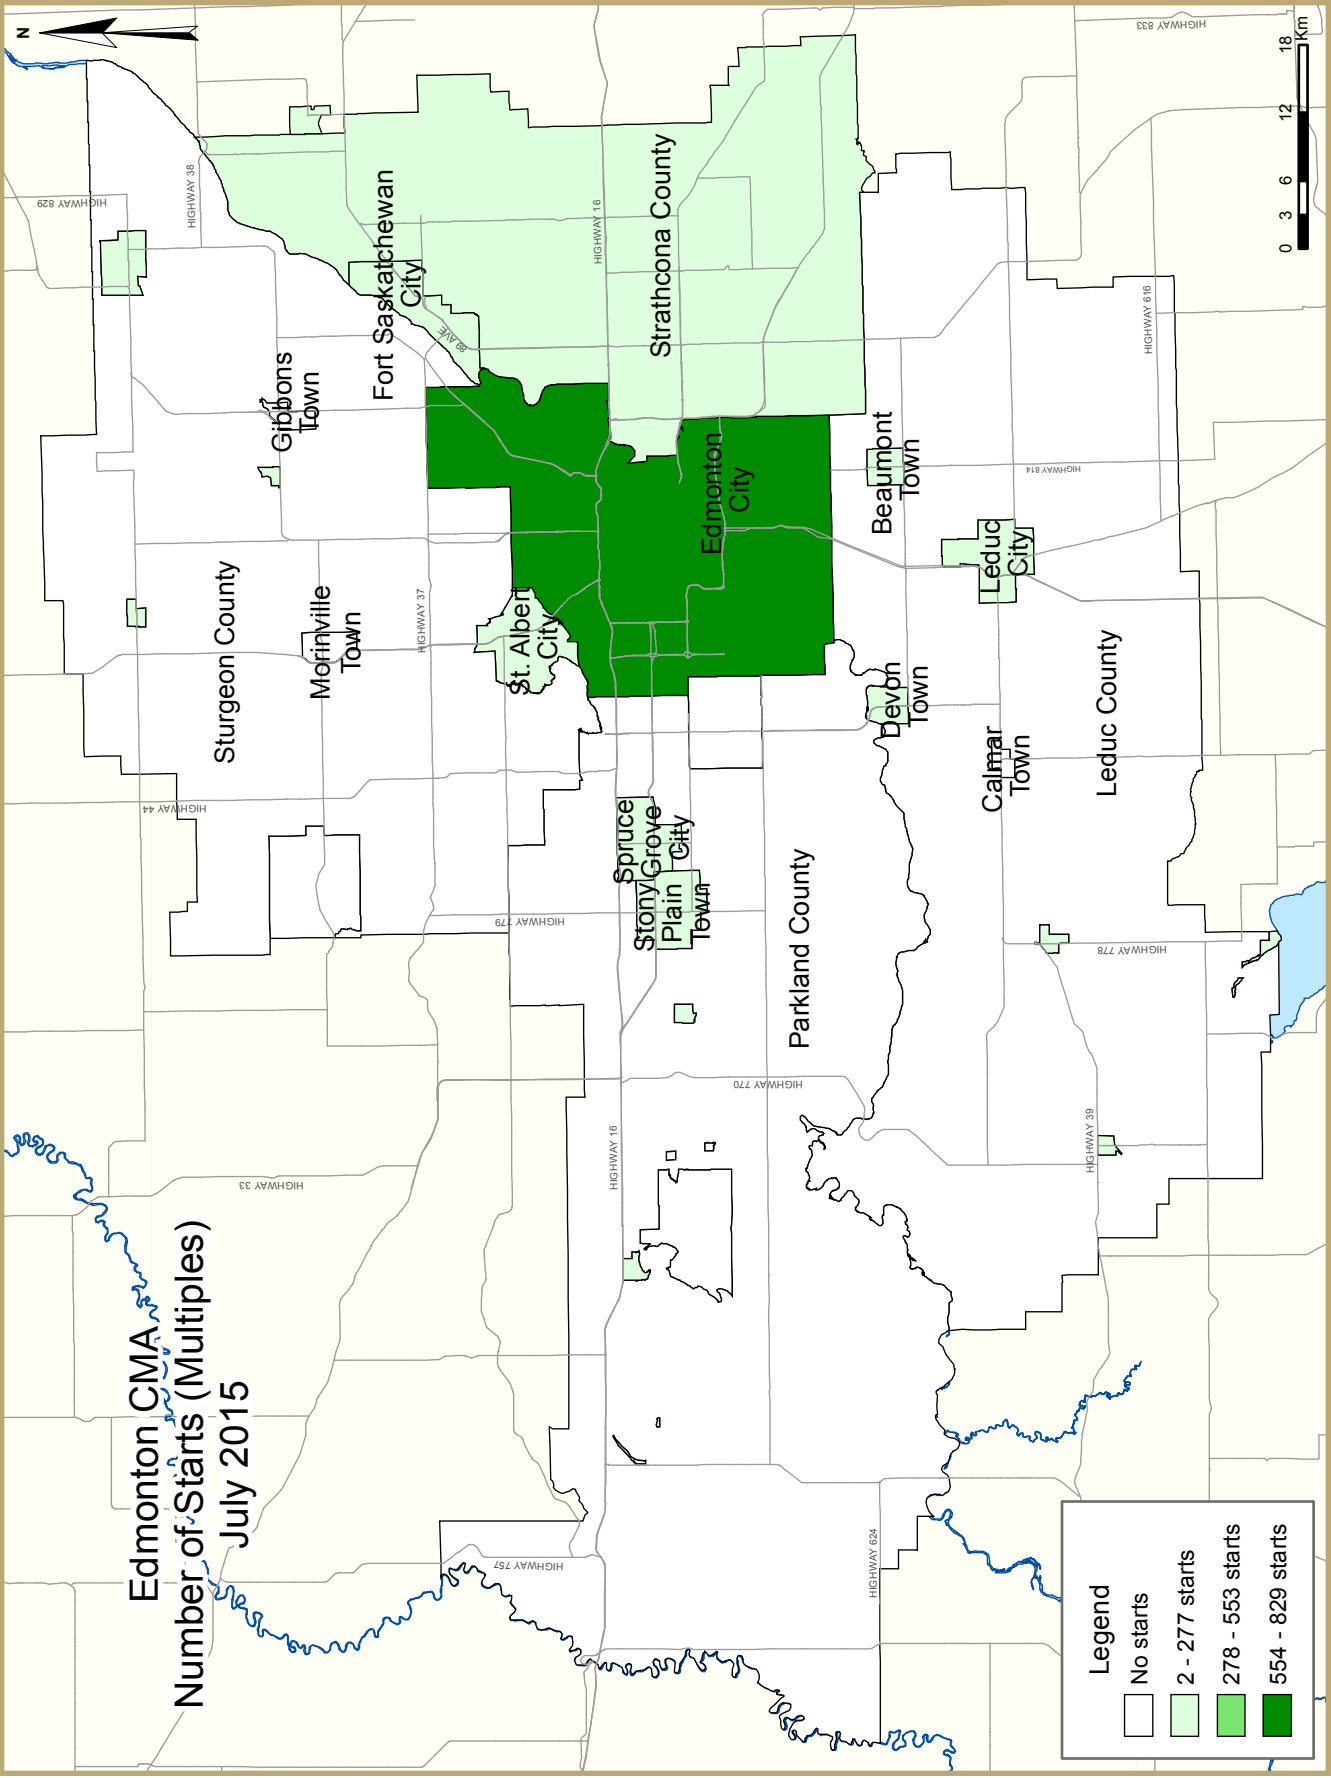

Multi-family starts in the Edmonton CMA, which include semi-detached, row, and apartment units, totalled 1,215 starts in July, up from 440 units in the same month one year prior. Apartment and row starts both moved higher with apartment starts accounting for the lion's share of the increase. Semi-detached starts, in contrast, declined 13 per cent year-over-year in July. This was the second consecutive decline for this segment of the multi-family market. On a year-to-date basis, multi-family housing starts totalled 7,536 units which was almost double the 3,793 starts recorded in the same period of 2014. Although employment growth has slowed and migration has declined, both new multi-family inventory and the rental apartment vacancy rate remain relatively low prompting builders to increase multi-family construction.

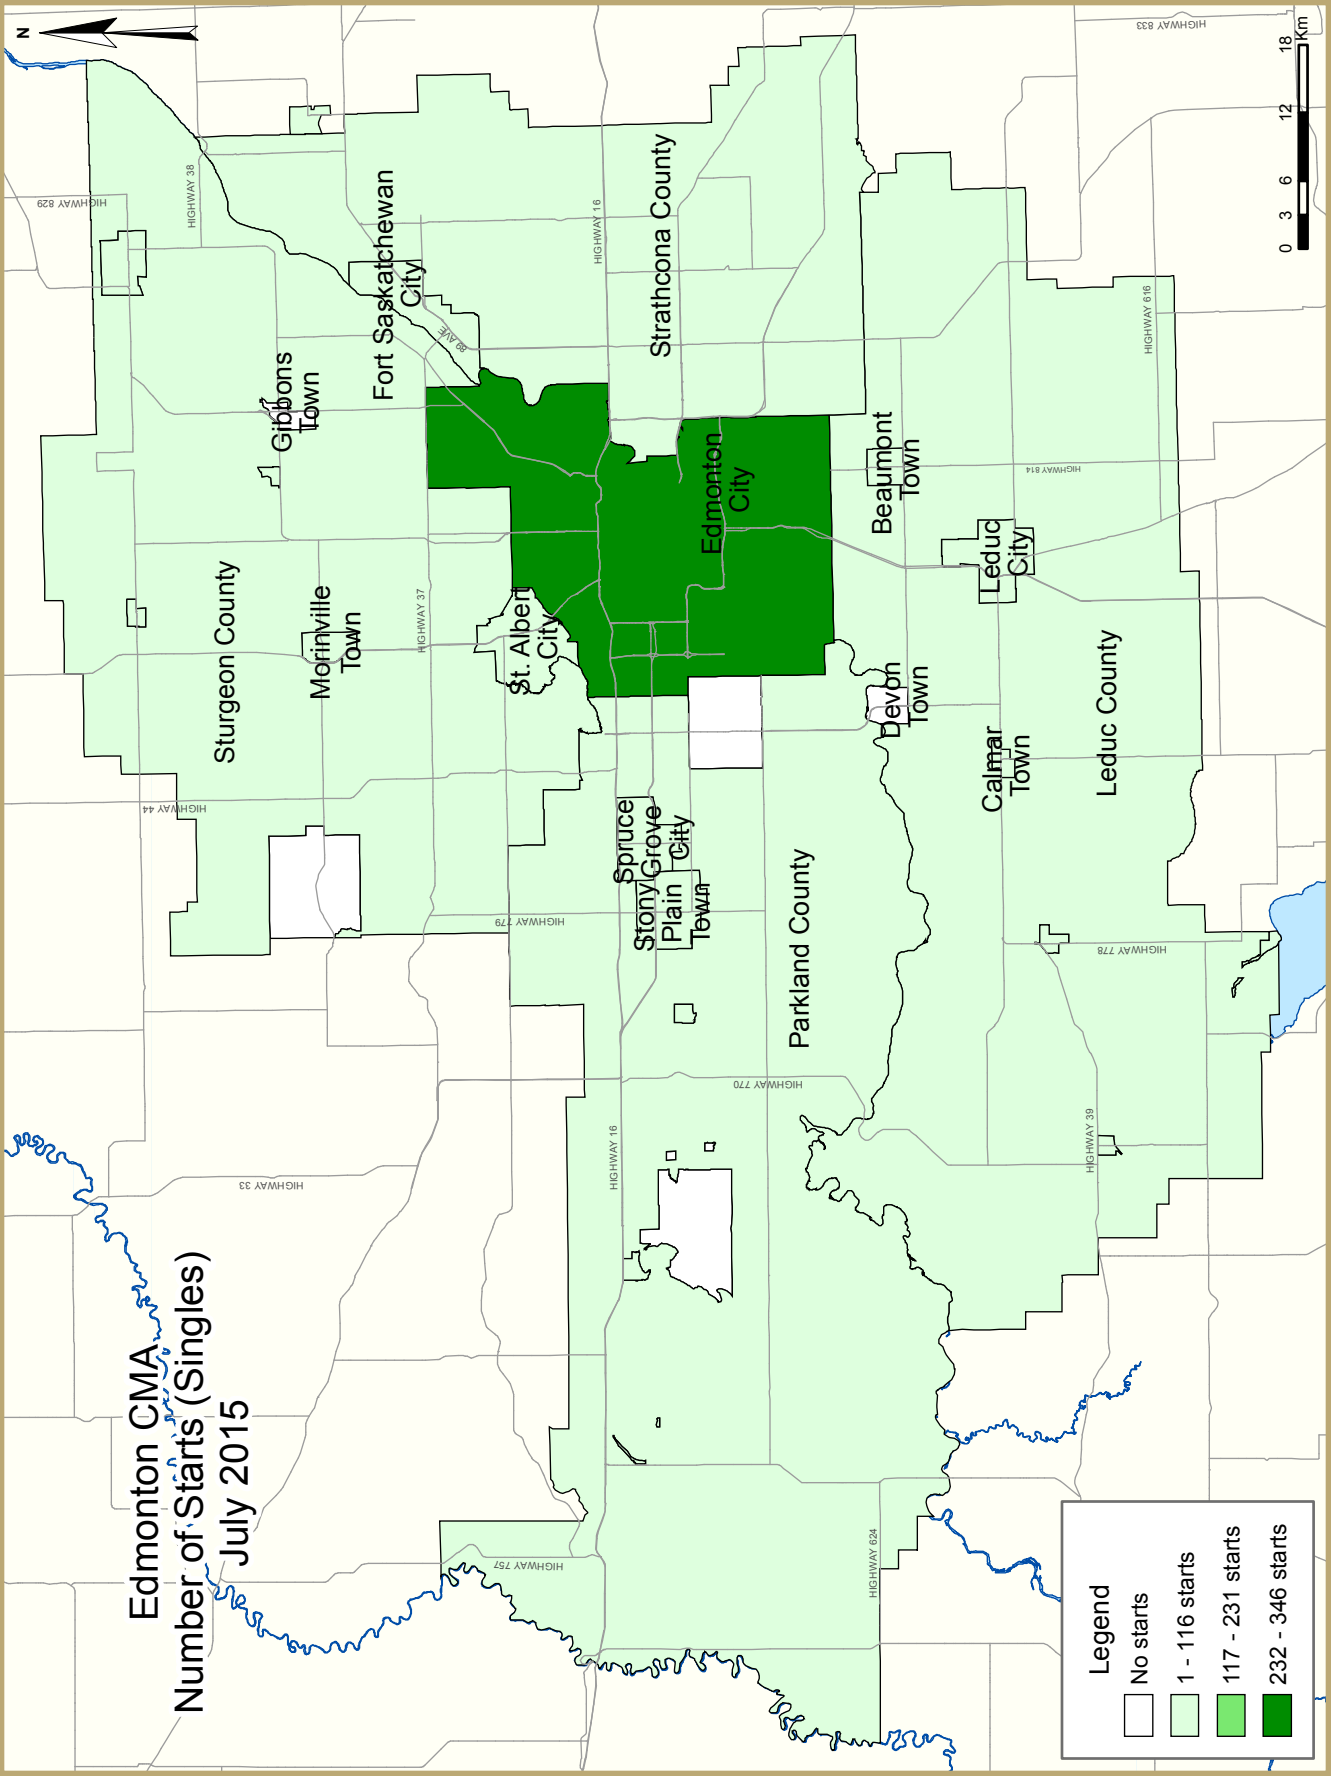

The increase in the multi-family starts through the first seven months of 2015 has pushed the number of units under construction higher. There were 12,323 multi-family units under construction in July, up 26 per cent from the same month of 2014. Apartment construction accounted for almost three-quarters of these units, with 8,887 apartments under construction in July. Completions of multi-family units also increased in July, rising to 1,007 units up from 744 in the same month one year prior. Higher completions put some upward pressure on ownership inventory, which rose to 604 units, up from 471 in July 2014. Apartment ownership inventory bucked this trend, as the number of units in inventory declined slightly from 219 to 216 units over the same comparison.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
