

HOUSING NOW

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: September 2015

Highlights

- Actual housing starts decline in August
- Compositional factors push the average single-detached absorbed price higher
- Multi-family housing starts continue to surpass last year's levels

Figure 1

* SAAR¹: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

Housing Market Overview

Total housing starts in the Edmonton Census Metropolitan Area (CMA) were trending at 16,874 units in August compared to 18,504 in July. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Edmonton CMA declined two per cent year-over-year to 1,289 units in August. The decline was a result of lower single-detached starts, which more than offset an increase in the multi-family sector. On a year-to-date basis, strength in the multi-family sector has led to a 41 per cent increase in total housing starts over the first eight months of 2014.

Lower consumer confidence, slower employment growth and increased competition from a higher supplied resale market continued to temper construction of single-detached homes in August. Builders poured foundations for 513 single-detached units in August, down 25 per cent from the 685 starts in the same month of 2014. Within the city of Edmonton, 327 single-detached starts were recorded, 30 per cent lower than one year prior. After eight months of 2015, single-detached starts in the Edmonton CMA were down six per cent from the same period of 2014.

Single-detached completions were up three per cent year-over-year in August, as builders put the finishing touches on 611 homes. At the same

Figure 2

Source: CMHC

time, absorptions increased to 652 units from 616 in the same month one year prior. With absorptions outpacing completions inventory moved lower on a month-to-month basis, declining to 599 units. Despite the decline, the number of homes in inventory was still higher than one year prior when 541 single-detached homes were completed and unabsorbed. Both the number of spec homes and show homes increased on a year-over-year basis.

The average single-detached absorbed price in the Edmonton CMA was \$605,393 in August, 12 per cent higher than the average one year prior. Compositional changes continued to drive the increase in the average price. Homes priced above \$600,000 accounted for 37 per cent of absorptions, up from 20 per cent in the same period one year prior.

On a year-to-date basis, the average absorbed price for a single-detached home was \$606,923, up from \$552,102 in the same period of 2014.

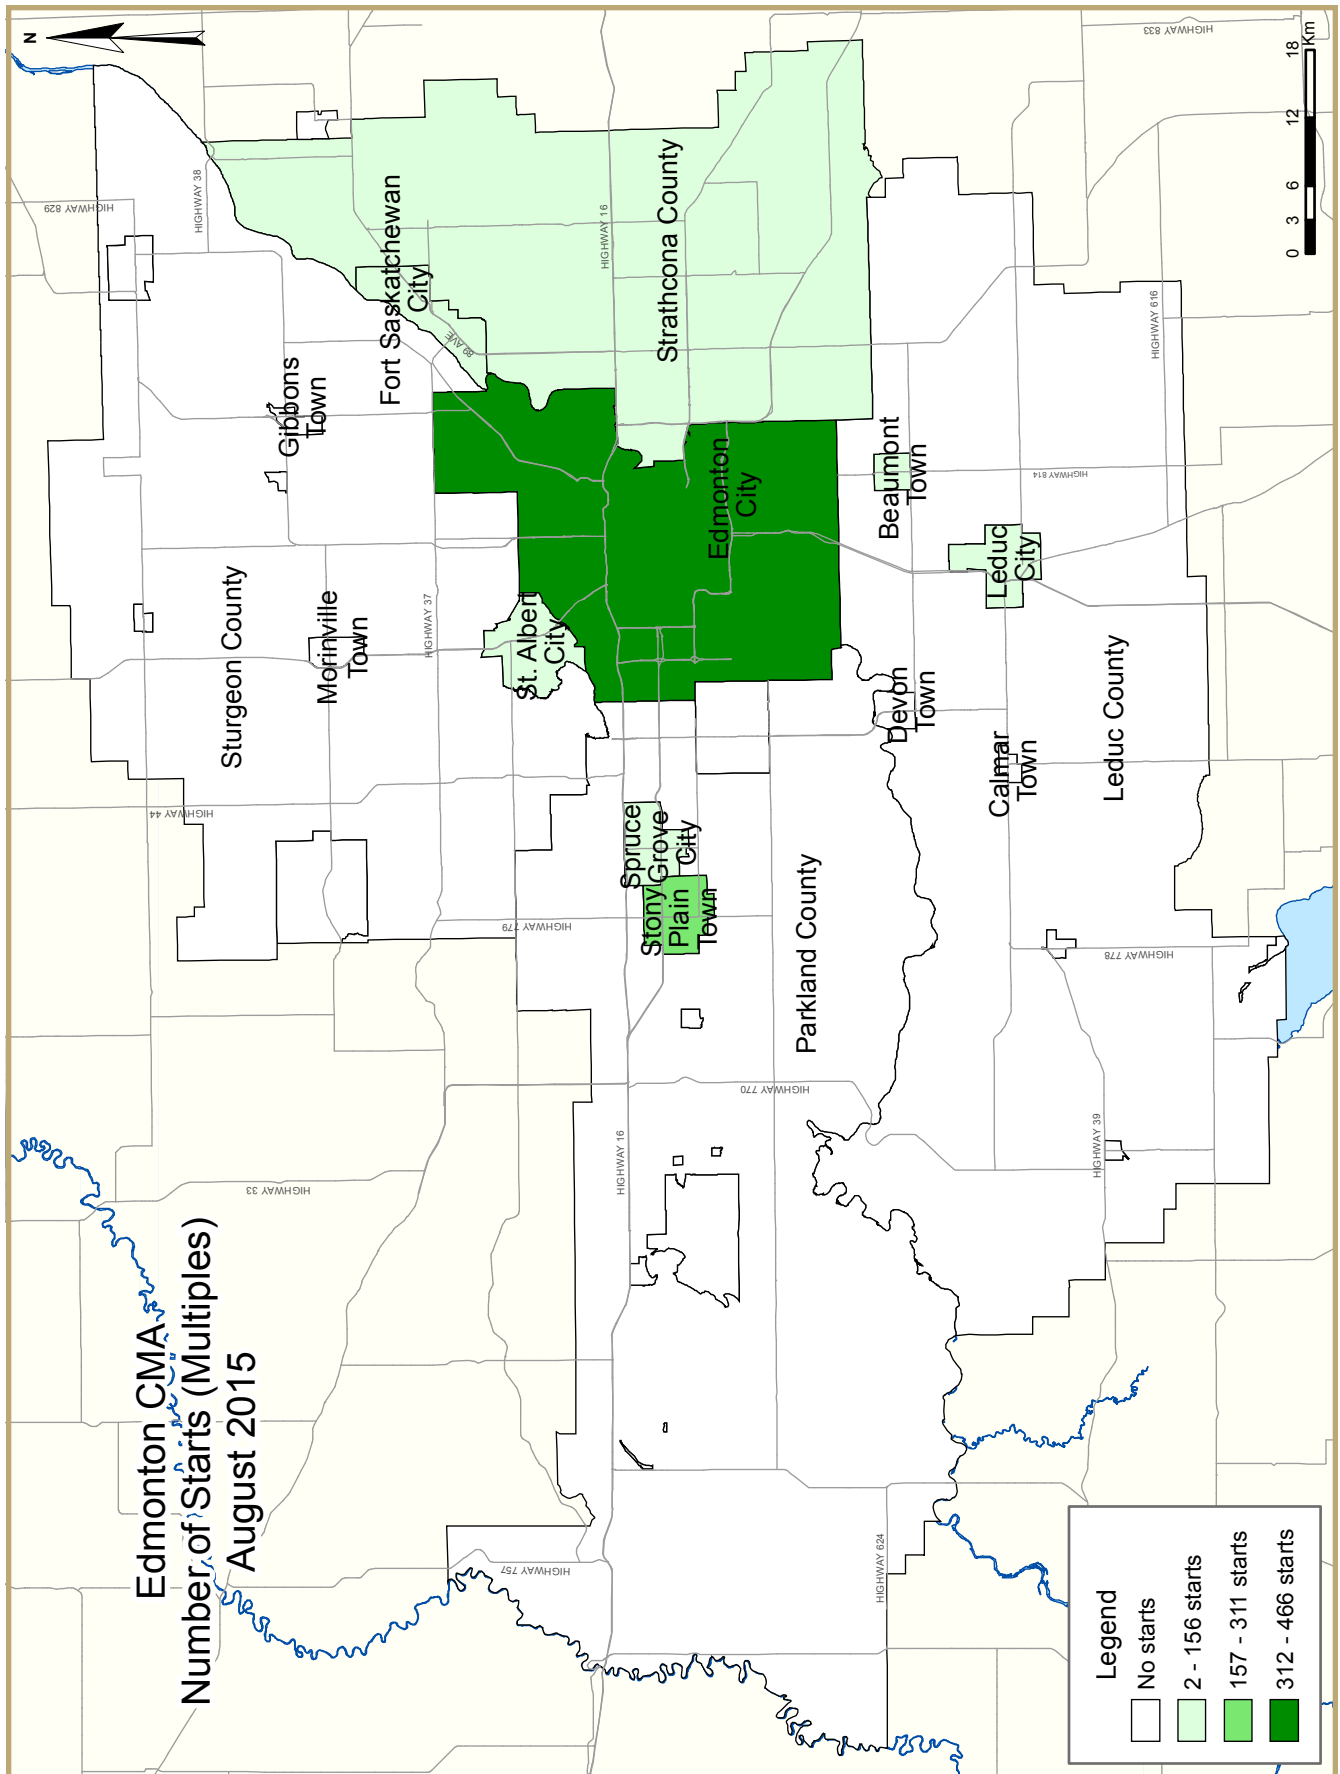

Multi-family starts in the Edmonton CMA, which include semi-detached, row, and apartment units, increased 22 per cent in August as 776 units were started, up from 637 in the same month of 2014. While all three segments of the market made gains, row starts increased by the largest margin. Through the first eight months of 2015, multi-family starts totalled 8,310, up from 4,430 in the same period of 2014. Rental starts accounted for 26 per cent of the 8,310 starts through August, up from 16 per cent in the same period of 2014. A relatively low vacancy rate in the Edmonton CMA has spurred construction of rental projects in 2015.

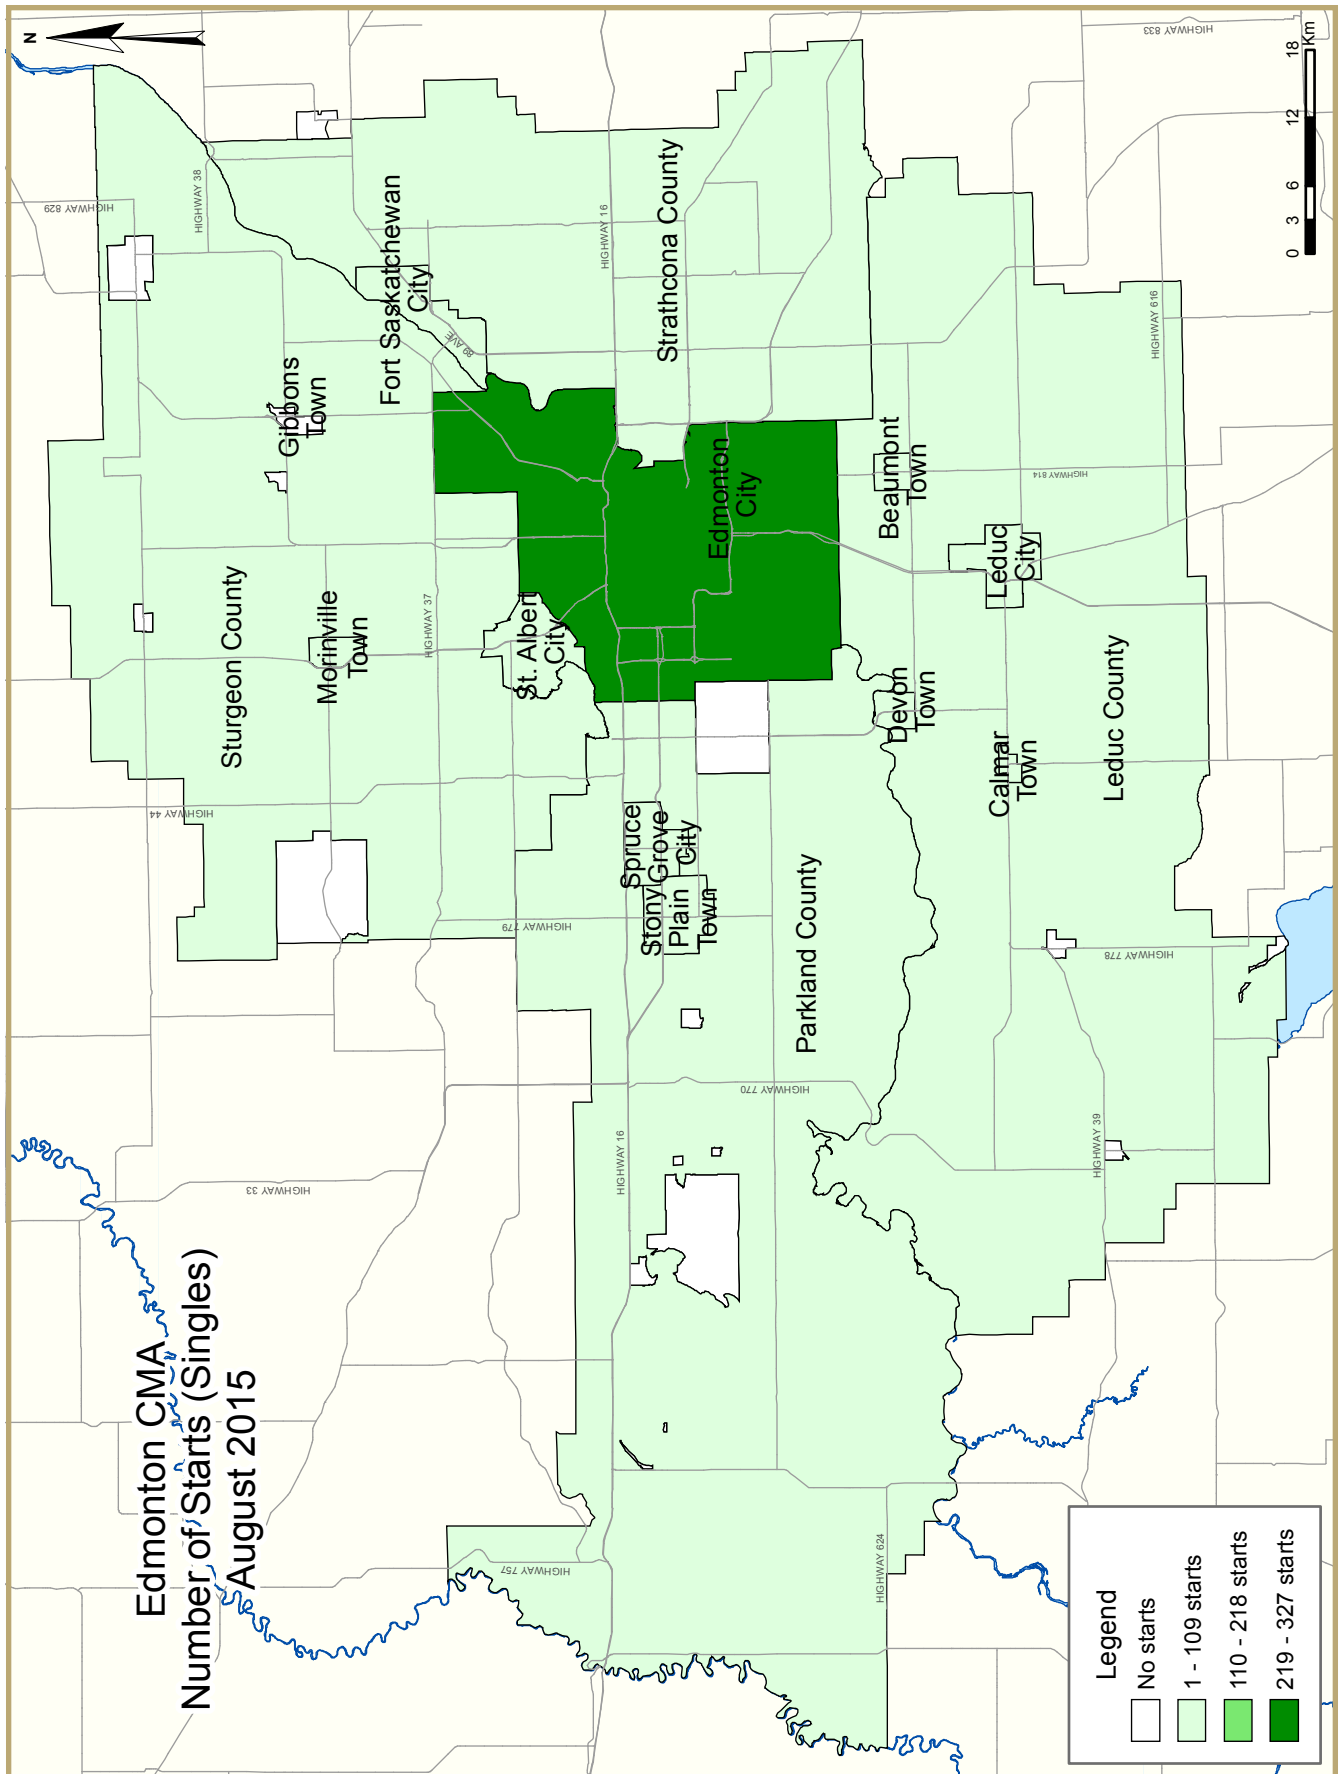

Completions of multi-family units totalled 825 in August, up from 564 in the same month of 2014. Although completions increased, the number of units under construction remained above 2014 levels, at 12,218 units. The number of multi-family units in inventory on the ownership market rose to 598 in August, up from 477 in the same month one year prior. Both the number of row and semi-detached units in inventory increased on a year-over-year basis, while apartment inventory declined by six per cent over the same period.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
