

HOUSING NOW

Montréal CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: February 2015

Highlights

- The year 2015 began with housing starts in the Montréal CMA trending lower.
- Centris® sales decreased in January 2015 from the same period in 2014.
- All geographic sectors of the CMA recorded declines in sales, except the South Shore.

*SAAR¹: Seasonally Adjusted Annual Rate

¹ All starts figures in this release, other than actual starts and the trend estimate, are seasonally adjusted annual rates (SAAR)—that is, monthly figures adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace were maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New home market

Housing starts in the Montréal census metropolitan area (CMA) were trending at 18,309 units in January 2015, compared to 19,663 in December 2014, according to Canada Mortgage and Housing Corporation (CMHC).² The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts. The year 2015 therefore began with housing starts in the Montréal CMA trending slightly lower.

According to the actual data, 860 housing starts were enumerated in the Montréal CMA in January 2015, compared to 832 during the same period in 2014, for an increase of 3 per cent. Rental housing starts posted the greatest hike (288 units in 2015, versus 158 a year earlier). Condominium and freehold housing starts, for their part, registered decreases of 16 per cent and 13 per cent, respectively.

Residential construction should, however, slow down over the coming months, particularly in the case of condominiums, given the large supply on both the existing and new home markets. In fact, the inventory of new, completed and unabsorbed condominiums in the Montréal CMA increased by 40 per cent over January 2014. There are now some 2,800 such units. This rise should therefore prompt builders to slow down the pace of activity in this market segment, in order to clear the relatively large inventory.

A review of the results for the various geographic sectors of the CMA revealed that most recorded declines in residential construction

Figure 2

Source: CMHC

in January from the same period in 2014. Decreases in activity were effectively observed in Vaudreuil-Soulanges (-55 per cent), on the North Shore (-48 per cent) and on the South Shore (-39 per cent). These decreases were essentially due to a marked drop in housing starts in the condominium segment. Conversely, increases in starts were noted in Laval and on the Island of Montréal.

Resale market

According to the latest Centris® housing statistics from the Quebec Federation of Real Estate Boards (QFREB), 1,935 homes were sold in the Montréal CMA in January 2015, for a decrease of 5 per cent from the corresponding period in 2014. Centris® transactions fell by 5 per cent for single-family houses and by 9 per cent for condominiums, but they rose by about 10 per cent in the case of plexes.

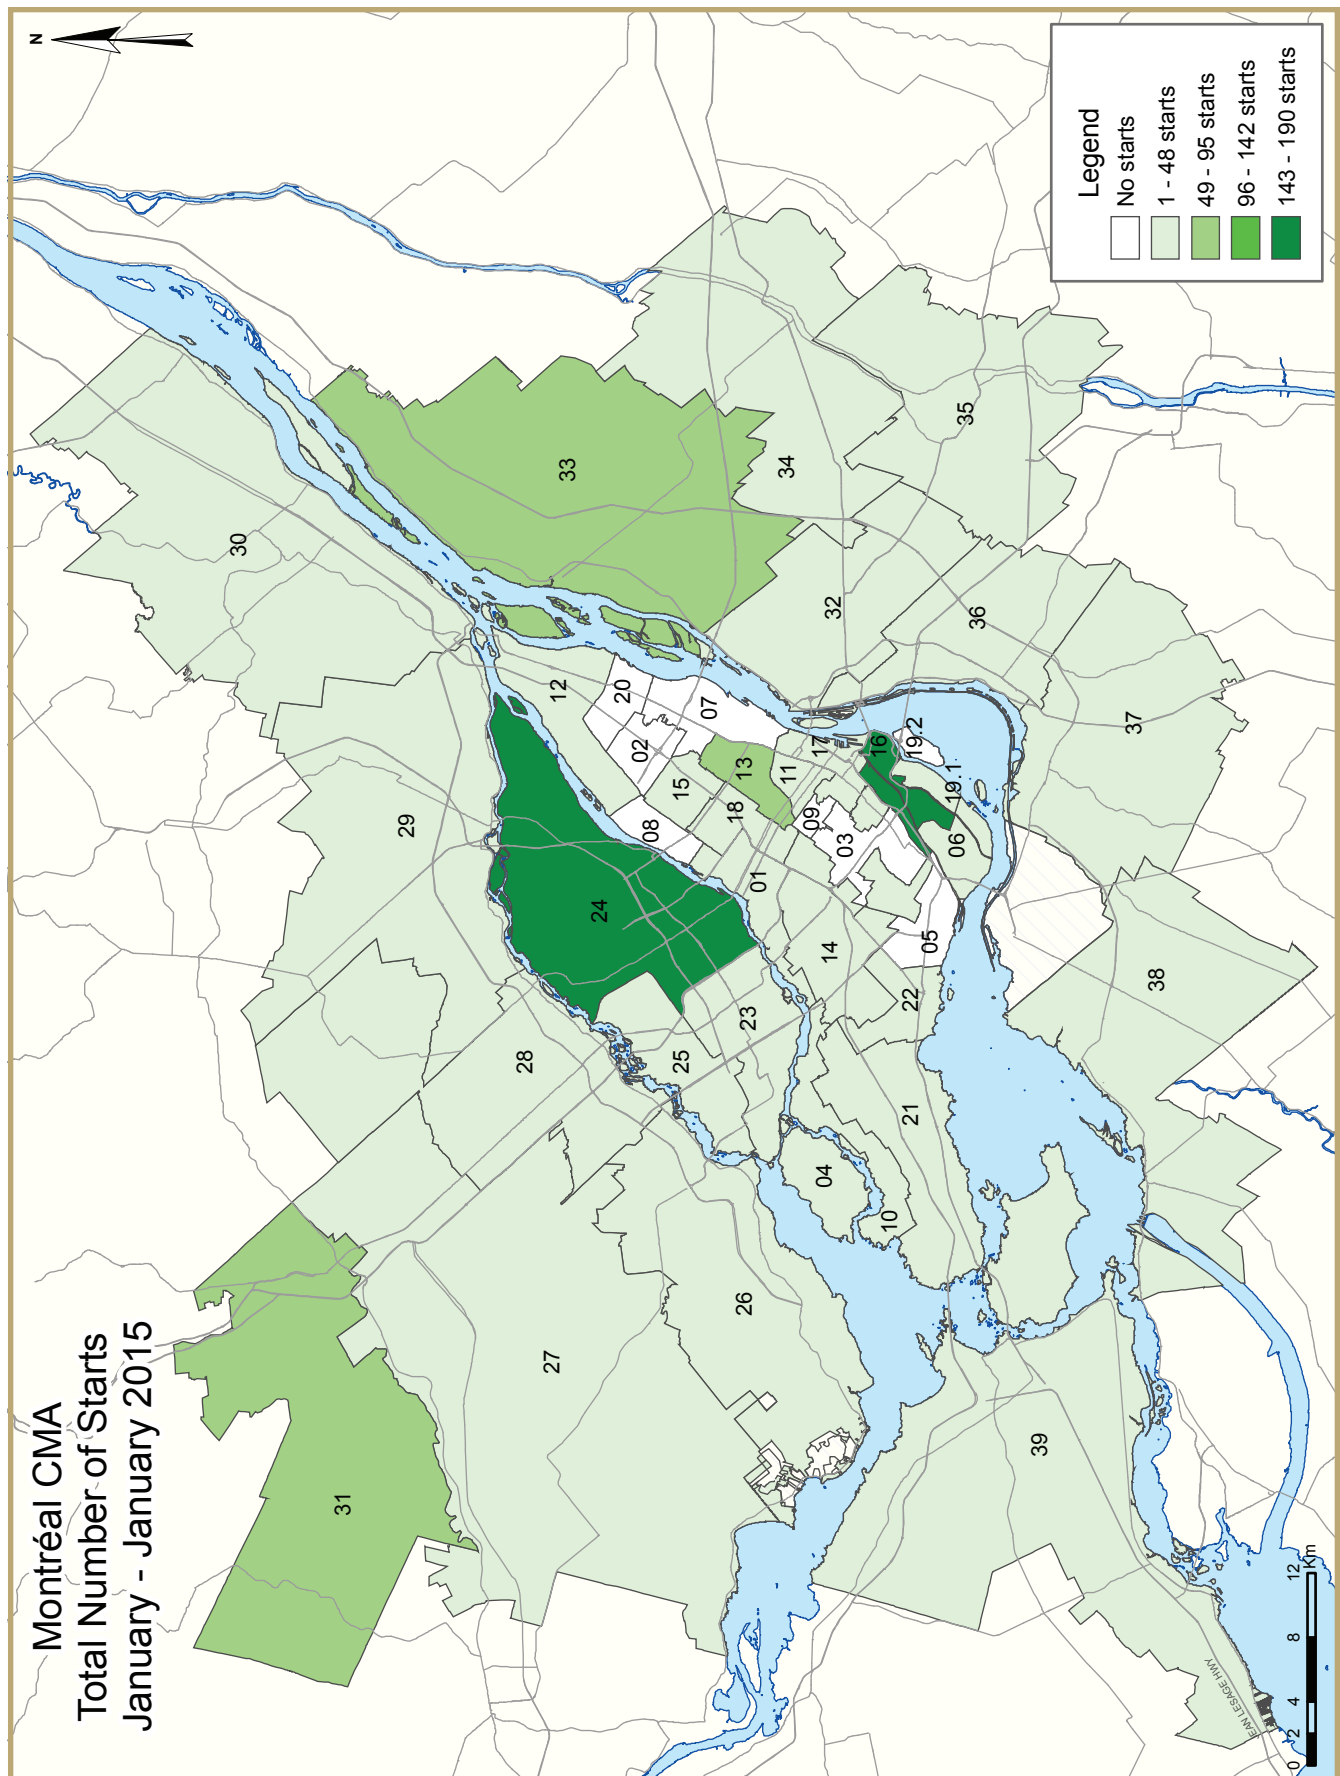

The overall supply of existing residential properties for sale continued to grow in January.

In fact, total active Centris® listings rose by 7 per cent over the same month in 2014. The supply of plexes posted the greatest increase (+9 per cent). In the case of single-family houses, active listings climbed by 8 per cent. The number of condominiums for sale on the market also rose, but to a lesser extent (+4 per cent).

On the geographic front, all sectors registered decreases in transactions in January, except the South Shore (+4 per cent). The declines varied between 5 per cent and 10 per cent.

With active listings rising steadily and demand falling, the market continued to show signs of easing. However, market conditions varied depending on the housing types. In the condominium segment, market conditions remained clearly favourable to buyers, which resulted in longer times to sell in all sectors of the metropolitan area. As for the single-family home and plex segments, their conditions remained at the boundary between a balanced market and a buyer's market.

² The stand-alone monthly SAAR was 12,096 units in January 2015, down from 17,763 in December 2014.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
