

HOUSING NOW

Montréal CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: August 2015

Highlights

- Housing starts in the Montréal CMA were again trending higher, at 15,742 units, in July.
- For the period from January to July 2015, 8,893 housing starts were enumerated, in comparison with 10,534 during the corresponding period in 2014, for a decrease of 16 per cent.
- The rental housing segment was bucking the trend, with housing starts having more than doubled in the first seven months of the year.

*SAAR¹: Seasonally Adjusted Annual Rate

¹ All starts figures in this release, other than actual starts and the trend estimate, are seasonally adjusted annual rates (SAAR)—that is, monthly figures adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace were maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New home market

Housing starts in the Montréal census metropolitan area (CMA) were trending at 15,742 units in July 2015, compared to 13,458 in June.² The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts.

Housing starts in the Montréal area were trending up in July, once again thanks to the construction of seniors' housing, particularly on the North Shore of Montréal. With the aging of the population, demand for spaces in retirement homes is bound to grow over the coming years, which helps explain the significant increase in activity in this market segment in 2015.

Actual starts from January to July nevertheless showed a decline from the corresponding period in 2014 (-16 per cent). In the condominium segment, builders greatly reduced their production (-46 per cent), given, in part, the rise in the inventory of completed and unabsorbed condominiums. In fact, builders are directing demand toward units that are under construction or completed but unabsorbed before starting new projects. The decrease also impacted the single-detached home segment (-14 per cent) and the semi-detached and row housing segment (-22 per cent). Rental housing starts, for their part, posted a strong increase (their number more than doubled) thanks to the construction of seniors' housing.

Figure 2

Source: CMHC

In the various sectors of the metropolitan area, the most significant decrease in activity was recorded on the Island of Montréal (-56 per cent), as a result of the important slowdown in condominium starts. In the suburbs, only the Vaudreuil-Soulanges sector (-25 per cent) posted a drop in activity. Significant increases were registered in Laval (+51 per cent), on the North Shore (+20 per cent) and on the South Shore (+16 per cent). Foundations were laid for many seniors' housing projects in these sectors.

Resale market

According to the Quebec Federation of Real Estate Boards (QFREB), Centris® sales of existing residential properties in the Montréal metropolitan area climbed by 2 per cent in July over the same month in 2014. The resale market

recovery that began in March therefore continued in July. The employment growth experienced in the Montréal area over the last few quarters and the low mortgage rates supported activity on the resale market.

In the first seven months of 2015, transactions in the metropolitan area rose by 5 per cent over the same period in 2014. Single-family houses and plexes recorded the largest gains in transactions (+7 per cent and +6 per cent, respectively). Transactions also rose for condominiums, but to a lesser extent (2 per cent).

The Island of Montréal stood out from the other sectors of the CMA, with transactions from January to July up by 9 per cent over a year earlier. The single-family home segment was the strongest on the Island, with an

² The stand-alone monthly SAAR was 25,744 units in July 2015, up from 25,182 in June.

increase of 18 per cent compared to the first seven months of 2014. In the suburbs, transactions climbed more moderately: 5 per cent on the South Shore, 3 per cent on the North Shore, 2 per cent in Vaudreuil-Soulanges and 1 per cent in Laval.

Given the rather similar increase in supply and demand, market conditions have remained rather stable since the beginning of the year. The condominium market remained clearly favourable to buyers, while the plex and single-family housing markets

remained at the cusp between a balanced market and a buyer's market. In fact, the average Centris® prices posted increases of about 3 per cent in all housing categories.³

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
