Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Highlights

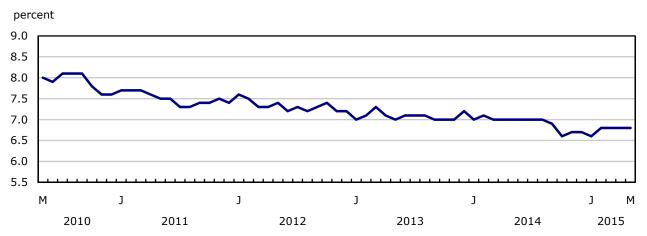

Employment increased by 59,000 in May, driven by gains in the number of private sector employees. The number of people participating in the labour market also rose in May, leaving the unemployment rate unchanged at 6.8% for the fourth consecutive month.

Chart 1 Employment and unemployment rates, Canada, seasonally adjusted

Employment

Unemployment rate

Analysis — May 2015

Employment increased by 59,000 in May, driven by gains in the number of private sector employees. The number of people participating in the labour market also rose in May, leaving the unemployment rate unchanged at 6.8% for the fourth consecutive month.

Since the beginning of 2015, employment gains have averaged 20,500 per month.

In the 12 months to May, employment increased by 192,000 (+1.1%), the result of more full-time work. Over the same period, the total number of hours worked grew by 1.2%.

Employment gains in May were highest among men aged 25 to 54, followed by men aged 55 and older. There was little change among the other demographic groups.

Provincially, employment increased in Ontario, British Columbia and Nova Scotia, while it declined in Newfoundland and Labrador, Manitoba and New Brunswick.

In May, there were more people working in manufacturing as well as in health care and social assistance. Additionally, employment rose in retail and wholesale trade; business, building and other support services; as well as in finance, insurance, real estate and leasing. In contrast, there were fewer workers in public administration and agriculture.

The number of private sector employees increased in May, while there was little change in self-employment. At the same time, public sector employment edged down.

Employment up for men aged 25 and older

For men aged 25 to 54, employment increased by 20,000 and their unemployment rate was unchanged at 6.0%, as their participation in the labour market also increased. In the 12 months to May, employment rose by 48,000 (+0.8%) for this group.

In comparison, employment in May was little changed for women aged 25 to 54 and the unemployment rate held steady at 5.2%. On a year-over-year basis, employment gains for this group totalled 46,000 (+0.8%).

For men aged 55 and older, employment rose by 14,000. However, their unemployment rate increased 0.5 percentage points to 6.4% as more of them searched for work. Compared with 12 months earlier, employment for this group increased by 68,000 (+3.6%), mostly a result of population aging.

For women aged 55 and older, employment was little changed in May and compared with 12 months earlier. Their unemployment rate fell 0.6 percentage points to 4.9% in May, as fewer women aged 55 and older searched for work.

Employment among youths aged 15 to 24 was also little changed both in May and on a year-over-year basis. Their unemployment rate was 13.2% in May.

Employment gains in Ontario and British Columbia

In Ontario, employment rose by 44,000 in May, pushing the unemployment rate down 0.3 percentage points to 6.5%. This employment increase accounted for most of the 53,000 (+0.8%) year-over-year gains for the province.

In May, employment increased by 31,000 in British Columbia, mostly in part-time work. This follows a similar-sized decrease in April, which was mainly in full-time employment. The unemployment rate was virtually unchanged at 6.1% in May, as more people participated in the labour market. In the 12 months to May, employment in the province was little changed.

In Nova Scotia, employment rose by 3,700 in May and the unemployment rate was 8.8%. Prior to this increase, employment in the province had been trending downward since January.

Employment in Newfoundland and Labrador fell by 4,300 in May, and the unemployment rate increased 1.2 percentage points to 13.8%. Employment in the province has been on a downward trend since November.

In Manitoba, 3,200 fewer people worked in May and the unemployment rate was 5.7%. Despite this employment decline, Manitoba had the highest rate of growth among all provinces in the 12 months to May, up 2.3% or 14,000.

There were 2,800 fewer people employed in New Brunswick in May and the unemployment rate was 9.6%. On a year-over-year basis, employment in the province was unchanged.

In May, employment was little changed in Alberta. The unemployment rate increased 0.3 percentage points to 5.8%. the highest rate since January 2011. On a year-over-year basis, employment gains totalled 38,000 (+1.7%). However, there has been little employment growth for the province since the start of 2015.

Employment in Quebec was virtually unchanged in May and the unemployment rate was 7.6%. However, compared with May 2014, employment in the province increased by 70,000 (+1.7%), with most of the growth in the first four months of 2015.

Industry perspective

Manufacturing employment increased for a second consecutive month, up 22,000 in May. These recent increases brought employment in the industry to a level similar to that of May 2014.

The number of workers in health care and social assistance rose by 21,000 in May. Compared with 12 months earlier, employment in the industry increased by 75,000 (+3.4%), one of the strongest growth rates among all industries.

There were 17,000 more people employed in retail and wholesale trade in May. On a year-over-year basis, however, employment in the industry was little changed as gains in wholesale trade were offset by declines in retail.

In business, building and other support services, employment rose for the second consecutive month, up 13,000 in May. These recent increases contributed to the year-over-year gain of 29,000 (+3.9%).

Employment in finance, insurance, real estate and leasing increased by 13,000 in May, bringing employment up 34,000 (+3.2%) over the past 12 months.

In public administration, employment declined by 12,000 in May, continuing the downward trend that began last fall. Compared with May 2014, employment in this industry was down 25,000 (-2.7%).

Employment also decreased in agriculture (-6,600), contributing to the year-over-year decline of 19,000 (-6.1%).

The number of private sector employees increased by 57,000 in May, while there was little change in self-employment. At the same time, public sector employment edged down.

In the 12 months to May, the number of private sector employees rose by 118,000 (+1.0%) and public sector employment increased by 42,000 (+1.2%). Over the same period, self-employment was little changed.

Summer employment for students

From May to August, the Labour Force Survey collects labour market data about youths aged 15 to 24 who were attending school full time in March and who intend to return to school full time in the fall. The May survey results provide the first indicators of the summer job market, especially for students aged 20 to 24, as many students aged 15 to 19 are still in school. The data for June, July and August will provide further insight into the summer job market. The published data are not seasonally adjusted, and therefore comparisons can only be made from one vear to another.

The employment rate among returning students aged 20 to 24, that is, the number of employed as a percentage of their population, was 59.0% in May, little changed from a year earlier. The unemployment rate for this group of students was 15.1% in May, up 1.5 percentage points from May 2014.

Note to readers

The Labour Force Survey (LFS) estimates for May are for the week of May 10 to 16.

The LFS estimates are based on a sample and are therefore subject to sampling variability. As a result, monthly estimates will show more variability than trends observed over longer time periods. For more information, see "Interpreting Monthly Changes in Employment from the Labour Force Survey." Estimates for smaller geographic areas or industries also have more variability. For an explanation of sampling variability of estimates and how to use standard errors to assess this variability, consult the "Data quality" section of the publication Labour Force Information (71-001-X).

This analysis focuses on differences between estimates that are statistically significant at the 68% confidence level.

The **employment rate** is the number of employed persons as a percentage of the population 15 years of age and over. The rate for a particular group (for example, youths aged 15 to 24) is the number employed in that group as a percentage of the population for that group.

The unemployment rate is the number unemployed as a percentage of the labour force (employed and unemployed).

The **participation rate** is the number of employed and unemployed as a percentage of the population. For more detailed information, see the *Guide to the Labour Force Survey* (71-543-G).

Seasonal adjustment

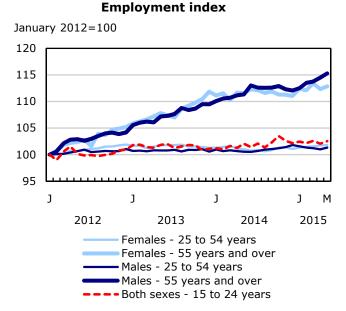

Unless otherwise stated, this release presents seasonally adjusted estimates, which facilitates comparisons by removing the effects of seasonal variations. For more information on seasonal adjustment, see Seasonally adjusted data – Frequently asked questions.

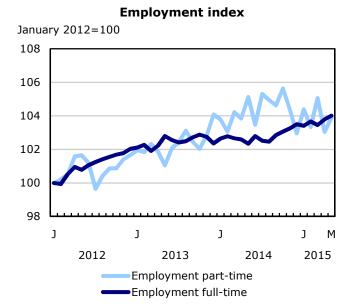

Sample redesign

Every 10 years, the LFS undergoes a sample redesign to reflect changes in population and labour market characteristics, as well as new definitions of geographical boundaries. The redesigned sample was introduced starting in January 2015 and will be fully implemented by June 2015.

282-0122	Labour force survey estimates (LFS), by provinces and economic regions based on 2011 census boundaries, 3-month moving average, unadjusted for seasonality, monthly
282-0123	Labour force survey estimates (LFS), by provinces, territories and economic regions based on 2011 census boundaries, annual
282-0124	Labour force survey estimates (LFS), employment by economic region based on 2011 census boundaries and North American Industry Classification System (NAICS), 3-month moving average, unadjusted for seasonality, monthly
282-0125	Labour force survey estimates (LFS), employment by economic region based on 2011 census boundaries and North American Industry Classification System (NAICS), annual
282-0126	Labour force survey estimates (LFS), employment by economic region based on 2011 census boundaries and National Occupational Classification for Statistics (NOC-S), 3-month moving average, unadjusted for seasonality, monthly
282-0127	Labour force survey estimates (LFS), employment by economic region based on 2011 census boundaries and National Occupational Classification for Statistics (NOC-S), annual
282-0128	Labour force survey estimates (LFS), by census metropolitan area based on 2011 census boundaries, sex and age group, 3-month moving average, unadjusted for seasonality, monthly
282-0129	Labour force survey estimates (LFS), by census metropolitan area based on 2011 census boundaries, sex and age group, annual
282-0130	Labour force survey estimates (LFS), employment by census metropolitan area based on 2011 census boundaries and North American Industry Classification System (NAICS), 3-month moving average, unadjusted for seasonality, monthly
282-0131	Labour force survey estimates (LFS), employment by census metropolitan area based on 2011 census boundaries and North American Industry Classification System (NAICS), annual

282-0132	Labour force survey estimates (LFS), employment by census metropolitan area based on 2011 census boundaries and National Occupational Classification for Statistics (NOC-S), 3-month moving average, unadjusted for seasonality, monthly
282-0133	Labour force survey estimates (LFS), employment by census metropolitan area based on 2011 census boundaries and National Occupational Classification for Statistics (NOC-S), annual
282-0134	Labour force survey estimates (LFS), by selected census agglomerations based on 2011 census boundaries, annual
282-0135	Labour force survey estimates (LFS), by census metropolitan area based on 2011 census boundaries, 3-month moving average, seasonally adjusted and unadjusted, monthly
282-0136	Labour force survey estimates (LFS), by Montréal, Toronto and Vancouver census metropolitan areas based on 2011 census boundaries, seasonally adjusted and unadjusted, monthly
282-0137	Labour force survey estimates (LFS), by population centres and rural areas based on 2011 census boundaries, sex and age group, unadjusted for seasonality, monthly
282-0138	Labour force survey estimates (LFS), by population centres and rural areas based on 2011 census boundaries, sex and age group, annual
282-0139	Labour force survey estimates (LFS), employment by population centres and rural areas based on 2011 census boundaries, class of worker and North American Industry Classification System (NAICS), unadjusted for seasonality, monthly
282-0140	Labour force survey estimates (LFS), employment by population centres and rural areas based on 2011 census boundaries, class of worker and North American Industry Classification System (NAICS), annual
282-0200	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, North American Industry Classification System (NAICS), and sex, unadjusted for seasonality, monthly
282-0201	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, North American Industry Classification System (NAICS), and sex, annual
282-0202	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, National Occupational Classification for Statistics (NOC-S), and sex, unadjusted for seasonality, monthly
282-0203	Labour force survey estimates (LFS), weekly wage distributions of employees by type of work, National Occupational Classification for Statistics (NOC-S), and sex, annual
282-0204	Labour force survey estimates (LFS), hourly wage distributions of employees by type of work, North American Industry Classification System (NAICS), and sex, unadjusted for seasonality, monthly
282-0205	Labour force survey estimates (LFS), hourly wage distributions of employees by type of work, North American Industry Classification System (NAICS), and sex, annual
282-0206	Labour force survey estimates (LFS), hourly wage distribution of employees by type of work, National Occupational Classification for Statistics (NOC-S), and sex, unadjusted for seasonality, monthly

282-0207	Labour force survey estimates (LFS), hourly wage distribution of employees by type of work, National Occupational Classification for Statistics (NOC-S), and sex, annual
282-0208	Labour force survey estimates (LFS), by educational degree, sex and age group, unadjusted for seasonality, monthly
282-0209	Labour force survey estimates (LFS), by educational degree, sex and age group, annual
282-0210	Labour force survey estimates (LFS), by family type and family age composition, unadjusted for seasonality, monthly
282-0211	Labour force survey estimates (LFS), by family type and family age composition, annual
282-0212	Labour force survey estimates (LFS), hours lost by employees by reason absent full and part week and sex, unadjusted for seasonality, monthly
282-0213	Labour force survey estimates (LFS), hours lost by employees by reason absent full and part week and sex, annual
282-0214	Labour force survey estimates (LFS), activity prior to unemployment by sex and age group, unadjusted for seasonality, monthly
282-0215	Labour force survey estimates (LFS), activity prior to unemployment, by sex and age group, annual
282-0216	Labour force survey estimates (LFS), reason for leaving job during previous year by sex and age group, unadjusted for seasonality, monthly
282-0217	Labour force survey estimates (LFS), reason for leaving job during previous year by sex and age group, annual
282-0218	Labour force survey estimates (LFS), reason for not looking for work, by sex and age group, unadjusted for seasonality, monthly
282-0219	Labour force survey estimates (LFS), reason for not looking for work, by sex and age group, annual
282-0220	Labour Force Survey estimates (LFS), employees by union status, sex and age group, Canada and provinces, annual
282-0221	Labour Force Survey estimates (LFS), employees by union status, sex, age group and education level, Canada, annual
282-0222	Labour Force Survey estimates (LFS), employees by union status and National Occupational Classification (NOC-S), Canada, annual
282-0223	Labour Force Survey estimates (LFS), employees by union status, North American Industry Classification System (NAICS) and sex, Canada, annual
282-0224	Labour Force Survey estimates (LFS), employees by union status, establishment size, job tenure, type of work and job permanency, Canada, annual
282-0225	Labour Force Survey estimates (LFS), average weekly earnings, average hourly wage rate and average usual weekly hours by union status and type of work, Canada and provinces, annual

Selected surveys from Statistics Canada

3701

Labour Force Survey

Selected summary tables from Statistics Canada

- Average hourly wages of employees by selected characteristics and occupation, unadjusted data, by province (monthly)
- · Days lost per worker by industry and sex
- · People employed, by educational attainment
- · Reasons for part-time work by sex and age group
- Self-employment, historical summary
- Employment by age, sex, type of work, class of worker and province (monthly)
- Actual hours worked per week by industry, seasonally adjusted (monthly)
- Labour force characteristics, unadjusted, by territory (3 month moving average)
- Employment by industry and sex
- · Full-time and part-time employment by sex and age group
- Labour force characteristics by age and sex
- Labour force characteristics, population 15 years and older, by economic region, by province
- Labour force characteristics by immigrant status of population aged 25 to 54, and by educational attainment
- Labour force characteristics by immigrant status, by detailed age group
- Labour force characteristics by immigrant status of population aged 25 to 54, by country of birth
- Days lost per worker due to illness or disability, by sex, by province
- · Employment by industry
- Labour force characteristics, seasonally adjusted, by province (monthly)
- Labour force characteristics, unadjusted, by province (monthly)
- Labour force characteristics, unadjusted, by economic region (3 month moving average)
- Labour force, employment and unemployment, levels and rates, by province
- Economic indicators, by province and territory (monthly and quarterly)

- · Days lost per worker by reason, by provinces
- · Labour force characteristics, population 15 years and older, by census metropolitan area
- Labour force characteristics, seasonally adjusted, by census metropolitan area (3 month moving average)
- Labour force characteristics, unadjusted, by census metropolitan area (3 month moving average)
- Distribution of employed people, by industry, by province
- Employment by major industry group, seasonally adjusted, by province (monthly)
- · Labour force characteristics
- Canada: Economic and financial data
- · Labour force characteristics by sex and age group
- · Labour force characteristics by immigrant status of population aged 25 to 54, by province
- Latest statistics (monthly)

Since 1992, the Labour force survey (LFS) has been conducted in the Yukon, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are not included in the national totals. In 1995, the LFS in the Yukon underwent a sample redesign. One result of the redesign was that the covered population increased from 85% to 92%, which is reflected by the sharp increase in the three month moving averages estimates of January, February and March of 1995 for all the level estimates. Users are therefore warned to be cautious when comparing estimates before January 1995 to estimates for January 1995 and forward.

Note(s): Related CANSIM table 282-0100.

Since 2001, the Labour force survey (LFS) has been administered in the Northwest Territories, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are not included in national totals.

Since 2004, the Labour force survey (LFS) has been administered in Nunavut, using an alternative methodology that accommodates some of the operational difficulties inherent to remote locales. These estimates are 3-month moving averages and are not included in national totals. From January 2004 to December 2007, estimates represent about 70% of all Nunavut residents aged 15 and over. Starting in January 2008, coverage was extended to 92%, so that by March 2008, the 3-month moving average is completely based on the extended coverage. Because of the large difference in coverage, users are recommended not to compare estimates prior to January 2008 with data afterwards. The January and February 2008 3-month moving average estimates are based on a mix of both coverages, since the extended coverage was introduced in January 2008. Estimates from January 2004 to December 2007 are based on the 10 largest communities in Nunavut: Iqaluit, Rankin Inlet, Cambridge Bay, Kugluktuk, Baker Lake, Arviat, Pond Inlet, Cape Dorset, Pangnirtung, Igloolik. Estimates from March 2008 to present cover the above communities as well as: Taloyoak, Gjoa Haven, Kugaaruk, Coral Harbour, Repulse Bay, Qikiqtarjuaq, Arctic Bay, Hall Beach, Clyde River.

Data quality

Definitions and explanations

The **labour force** is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed persons are those who, during the reference week:

- (a) did any work at all
- (b) had a job but were not at work

A person is considered to be **full-time** if his/her usual hours at the main job are 30 or more hours per week. When the number of hours worked at the main job is usually less than 30 hours per week then he/she is considered to be **part-time**.

Unemployed persons are those who, during the reference week:

- (a) were without work, had actively looked for work in the past four weeks (ending with reference week), and were available for work:
- (b) had not actively looked for work in the past four weeks but were on temporary layoff and were available for work;
- (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Persons in the civilian non-institutional population 15 years of age and over who, during the reference week, were neither employed nor unemployed are classified as **not in the labour force**.

The **unemployment rate** represents the number of unemployed persons expressed as a percentage of the labour force (employed and unemployed). The unemployment rate for a particular group (age, sex, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.

The **participation rate** represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, etc.) is the labour force in that group expressed as a percentage of the population for that group.

The employment rate represents the number of persons employed expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, etc.) is the number employed in that group expressed as a percentage of the population for that group.

The **part-time rate** represents the number of persons employed part-time expressed as a percentage of the employed. The part-time rate for a particular group (age, sex, etc.) is the number employed part-time in that group expressed as a percentage of the employed for that group.

All geographic regions are based on the 2011 Census boundaries.

Seasonal adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. The seasonally adjusted series contains irregular as well as longer-term cyclical fluctuations.

The seasonally adjusted series are revised each year to take into account current data and to generate new forecast factors for the next twelve months. The data are therefore subject to slight revisions in future issues of this publication.

For more information on seasonal adjustment, see Seasonally adjusted data – Frequently asked questions.

Sampling variability of estimates

Estimates in this publication are based on the Labour Force Survey, a monthly survey of approximately 56,000 households across Canada. Because the entire population is not surveyed, the estimates are subject to sampling error. While the published estimate is the best available indicator of the real value, changes in the level of any estimates between two months can be the result of a true change or sampling variability. The sampling error can be estimated by calculating the standard error for the published estimate or statistic. These standard errors have been included in the publication tables, in order to assist users in interpreting the data. They are based on 12-month averages and are updated twice a year, in February and August.

Interpretation based on standard error

Approximately two thirds of the time (68%), a change greater than the sampling error indicates a real change. The larger the change compared to the standard error, the better the chance that we are observing a real change, as opposed to a change due to sampling variability. At the 95% confidence level, the change in the estimate must be greater than twice the sampling error in order to ensure that change is real.

Movements in estimates that are smaller than the sampling error are less likely to reflect a real change and more likely to be due to sampling variability. While the above is true for monthly movements, one can have more confidence in a series of consecutive movements in the same direction, even though some of the monthly movements may be smaller than the sampling error.

Interpretation based on confidence intervals

Confidence intervals provide another way of looking at the variability inherent in estimates of sample surveys. To illustrate how to calculate the confidence interval, let us say that one month the published estimate for total employment rose by 16,000 to reach 17,800,000. The associated standard error for the movement estimate is 28,800. The standard error used to interpret the movement estimate indicates that:

- There are approximately two chances in three (68%) that the real value of the movement between the two months falls within the range -12,800 to +44,800 (16,000 + or - one standard error).
- There are approximately nine chances in ten (90%) that the real value of the movement between the two months falls within the range -30,100 to +62,100 (16,000 + or - 1.6 times the standard error).
- There are approximately nineteen chances in twenty (95%) that the real value of the movement between the two months falls within the range -41,600 to +73,600 (16,000 + or – two standard errors).

For more detailed explanations on sampling variability of estimates, and in particular for information on how to assess the variability of level estimates, consult the Data quality section of the Guide to the Labour Force Survey, (71-543-G).
