## ADVANCE STATEMENT OF EMPLOYMENT AND WEEKLY EARNINGS

JUNE 1965

(These data are subject to revision)

The industrial composite index of employment (1949=100) rose 2.8 p.c. at the end of June to 140.6 as all major industrial divisions increased staffs to meet peak summer production demands. As usual, the increases were largest in outdoor industries such as forestry and construction. However, the increase in forestry of 29.4 p.c. was well below the typical increase between these months.

Seasonally adjusted, the industrial composite for June, at 136.8, was down 0.3 p.c. from the May figure of 137.3. Most major industrial divisions contributed to the decrease but four-fifths of the overall reduction originated in forestry and transportation, storage and communication. The only increases were recorded in construction (0.2 p.c.) and finance, insurance and real estate (0.9 p.c.)

The seasonally-adjusted index for manufacturing, at 126.9, was unchanged in June as movements in the major components were offsetting. The adjusted index for durables advanced 0.6 p.c. due to an above-average increase in transportation equipment. Non-durables declined 0.6 p.c. due, mainly, to major industrial disputes in paper and rubber products.

The industrial composite of average weekly wages and salaries rose 38 cents in June to \$90.98. This figure was \$4.36 above last year's per capita figure of \$86.62. The payroll index, at 300.3, was 3.2 p.c. above May 1965 and 10.7 p.c. above June 1964.
