THE

OCTOBER

EMPLOYMENT SITUATION

1926

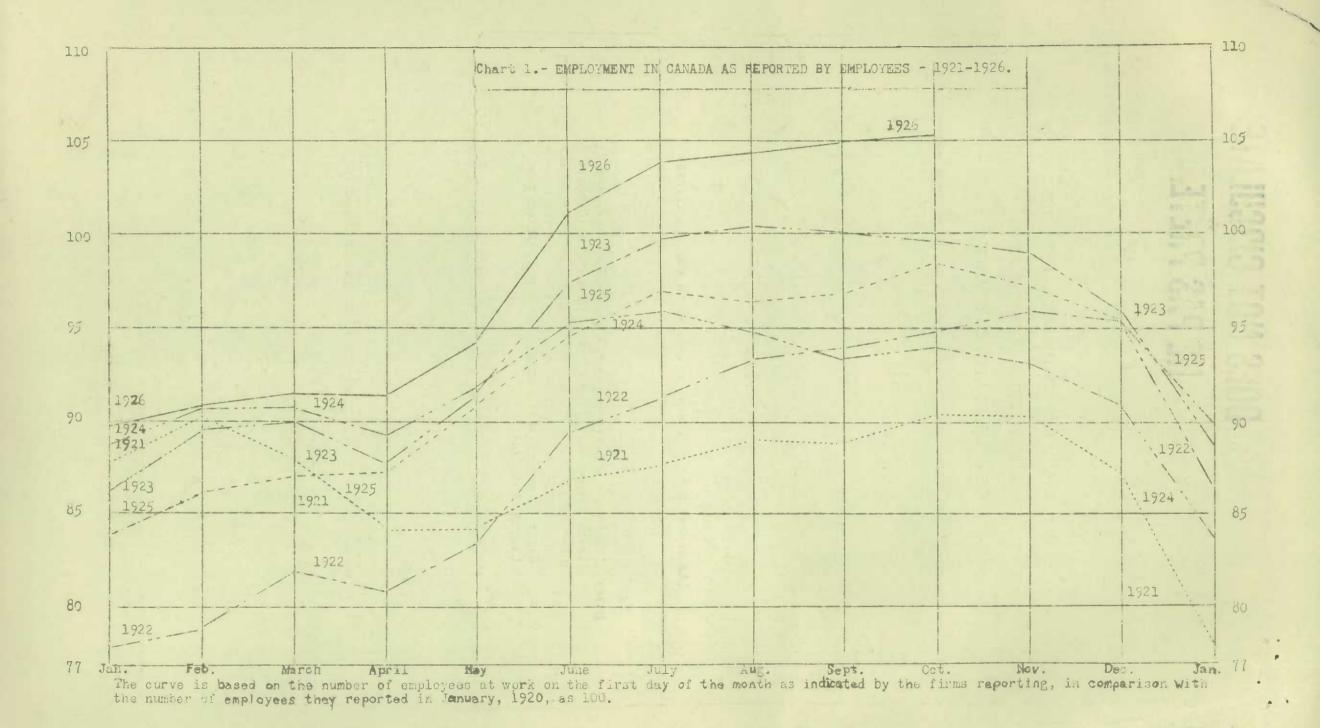

(AS REPORTED BY EMPLOYERS HAVING 15 OR MORE EMPLOYEES)

Note: - Statements relating to unemployment as reported by trade unions, and to the operations of the Employment Service of Canada, together with the statistics of the present bulletin, are published in the Labour Gazette, the official journal of the Department of Labour, Canada.

Published by authority of the Hon. James Malcolm,
Minister of Trade and Commerce

OTTAWA

1926

DEPARTMENT OF TRADE AND COMMERCE DOMINION BUREAU OF STATISTICS GENERAL STATISTICS BRANCH CTTAWA - CANADA

Issued October 23rd, 1926

THE OCTOBER EMPLOYMENT SITUATION

Dominion Statistician: R.H. Coats, B.A., F.S.S. (Hon), F.R.S.C. Chief, General Statistics Branch: S.A. Cudmore, M.A., F.S.S.

Employment at the beginning of October showed a further moderate improvement, 2.231 workers being added to the staffs of the 5.918 reporting employers, whose payrolls aggregated 865,013 persons. Although this gain is somewhat less extensive than that noted on the corresponding date of last year, employment continued to be in decidedly greater volume than in any other month since 1920; the index rose from 104.9 on Sept. 1 to 105.2 at the beginning of October, compared with 98.3, 93.9, 99.5, 94.6 and 90.2 in Oct. 1, 1925, 1924, 1923, 1922 and 1921, respectively.

Manufacturing, construction and services showed curtailment, while increases were recorded in logging, mining, transportation and trade; in the last named the gains were the largest indicated on Oct. 1 of any year of the record.

EMPLOYMENT BY PROVINCES

Ontario and the Prairie Provinces registered heightened activity; in Quebec the situation was practically unchanged, while employment in the remaining provinces showed a falling off.

Maritime Provinces. - Construction, especially the highway division, released a large number of employees and there were also losses in manufacturing, transportation and hotel services. On the other hand, logging and coal mining reported improvement. Statements were tabulated from 516 employers with 69,597 workers, as compared with 71,360 in the preceding month. Reductions had also been indicated on Oct. 1, 1925, when the situation was less favourable.

Quebec. - Practically no general change in employment was reported in Quebec, according to 1,295 firms, whose working forces totalled 248,742 persons, a decline of 0.04 p.c. from their Sept. 1 staffs. There were considerable losses in iron and steel plants and smaller decreases in lumber, pulp and paper and electric current works, and in the street railway and cartage group, but leather, textiles, mining, trade, steam railway operations and shipping recorded important increases. Although improvement had been noted at the beginning of October of last year, the index of employment then was over 10 points lower.

Ontario. - The trend in Ontario continued to be favourable; 2,698 establishments reported that they had added 2,856 persons to their payrolls, bringing them up to 350,841 on Oct. 1, when the index, at 98.7, was higher than in any other month of the last five years. Manufacturing, logging, mining and trade registered heightened activity, while construction showed a seasonal falling off during the month under review.

Prairie Provinces. Continued gains were noted in the Prairie Provinces, where 755 firms increased their forces from 113,318 employees on Sept. 1 to 116,453 at the beginning of October. Manufacturing, mining, transportation and trade reported considerable improvement; construction, however, was stasonally slacker, as was work in summer hotels. Employment was in greater volume than on the corresponding date of a year ago, when additions to staffs had also been made.

British Columbia. - For the first time since the beginning of April, employment in British Columbia showed curtailment; this took place chiefly in the food, construction and transportation industries, while logging and coal mining were more active. A combined working force of 79,380 persons was reported by the 654 co-operating employers, who had 81,259 in the preceding month. Moderate improvement had been recorded on Oct. 1, 1925, but the index then was over four points lower.

Tables 1 and 4 give index numbers by economic areas.

EMPLOYMENT BY CITIES

Improvement was shown in Quebec, Toronto, Ottawa and Winnipeg, while employment declined in Montreal, Hamilton, Windsor and Vancouver.

-2-

Montreal.— A further small reduction was reported in Montreal, where 704 firms employed 118,514 persons, or 213 less than in the preceding month. Railway car shops released a large number of workers, following a reason of great activity, and electric current plants, local transportation and building were also slacker. On the other hand, the leather, vegetable food, textile and printing groups recorded moderate improvement and there were pronounced gains in shipping, on road construction and in trade. Conditions were considerably better than on Oct. 1, 1925, when large additions to staffs were made.

Quebec.— Statistics were compiled from 91 Quebec employers with 9,374 workers, whose reports showed that there was an increase in manufacturing, but a decrease in transportation. The index was several points higher than on the corresponding date of last year, although more marked gains were then registered.

Toronto. - Employment in Toronto showed the ninth consecutive increase recorded so far this year, 718 persons having been added to the working force of the 780 co-operating firms, who had 100,125 employees. The greatest improvement was noted in manufacturing, particularly in the textile and food industries, while construction was seasonally quiet. Rather larger gains were indicated on Oct. 1, 1925, but employment on the date under review was at the highest level reached since the record for Toronto was commenced in 1922.

Ottawa. - Further improvement was noted in Ottawa, chiefly in manufacturing and trade. The 128 employers furnishing statistics added 107 workers to their staffs, bringing them up to 10,579 at the beginning of October. Employment was not quite as brisk as on the same date in 1925.

Hamilton. - Employment in Hamilton, after eight months of uninterrupted expansion, showed a moderate decline, but the situation continued to be decidedly more favourable than in any month of previous years of the record. Manufacturing, especially of iron and steel products, reported curtailment, while a slightly upward tendency was shown in other groups. A combined working force of 30,272 persons was employed by the 201 co-operating firms, as compared with 30,564 on Sept. 1.

Windsor and Other Border Citios. - Automobile works in the Border Cities released some help, and construction was also slacker; 80 establishments reduced their working forces from 11,987 persons on Sept. 1 to 11,452 on the date under review. Considerable improvement had been indicated on Oct. 1 of last year, but the index then was several points lower.

Winniveg. Continued important gains were reported in Winnipeg, where the 277 employers furnishing data enlarged their payrolls by 809 workers to 29,081 at the beginning of October. Trade showed pronounced improvement, while manufacturing was rather dull. This increase greatly exceeded that recorded on the corresponding date of last year, when the index was over 15 points lower.

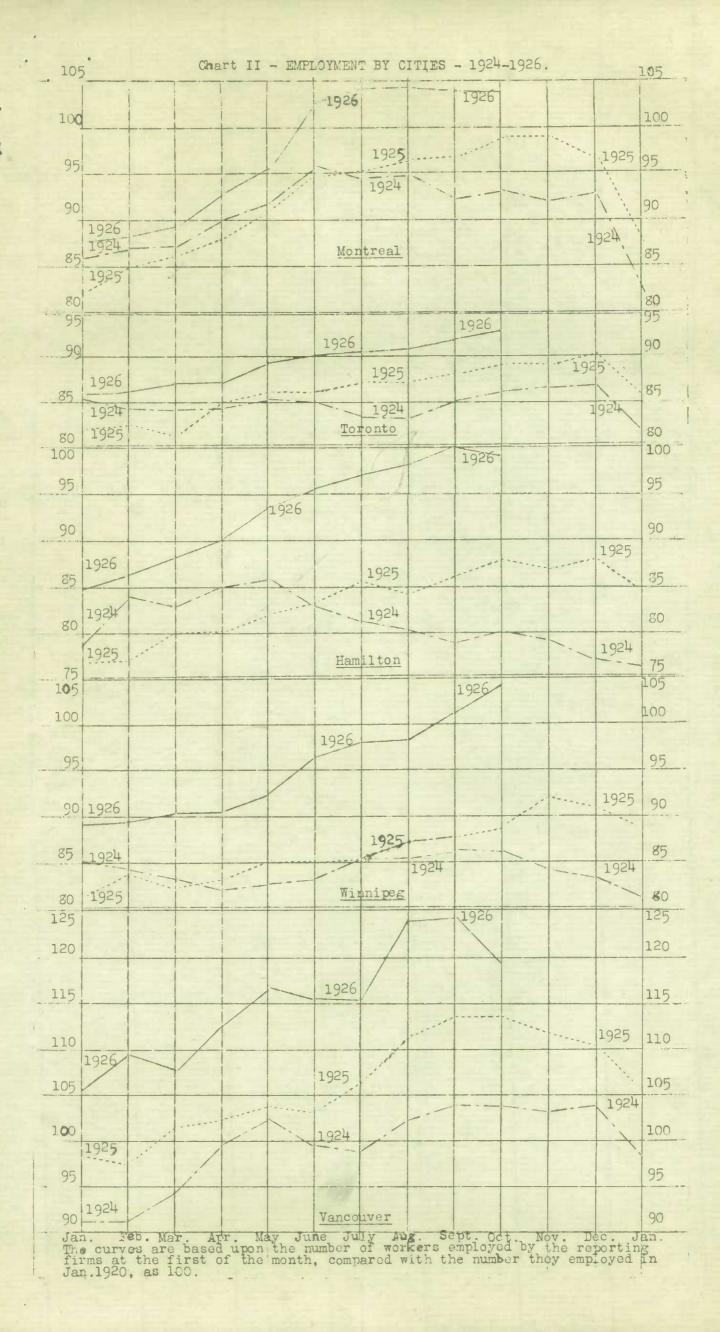

Vancouver. Food and tin can factories reported seasonal losses, and there was also a falling off in employment in transportation. Returns were compiled from 224 firms in Vancouver, whose staffs aggregated 25,903 persons, compared with 26,534 in the preceding month. Although an upward tendency had been indicated on Oct. 1, 1925, the index then was considerably lower.

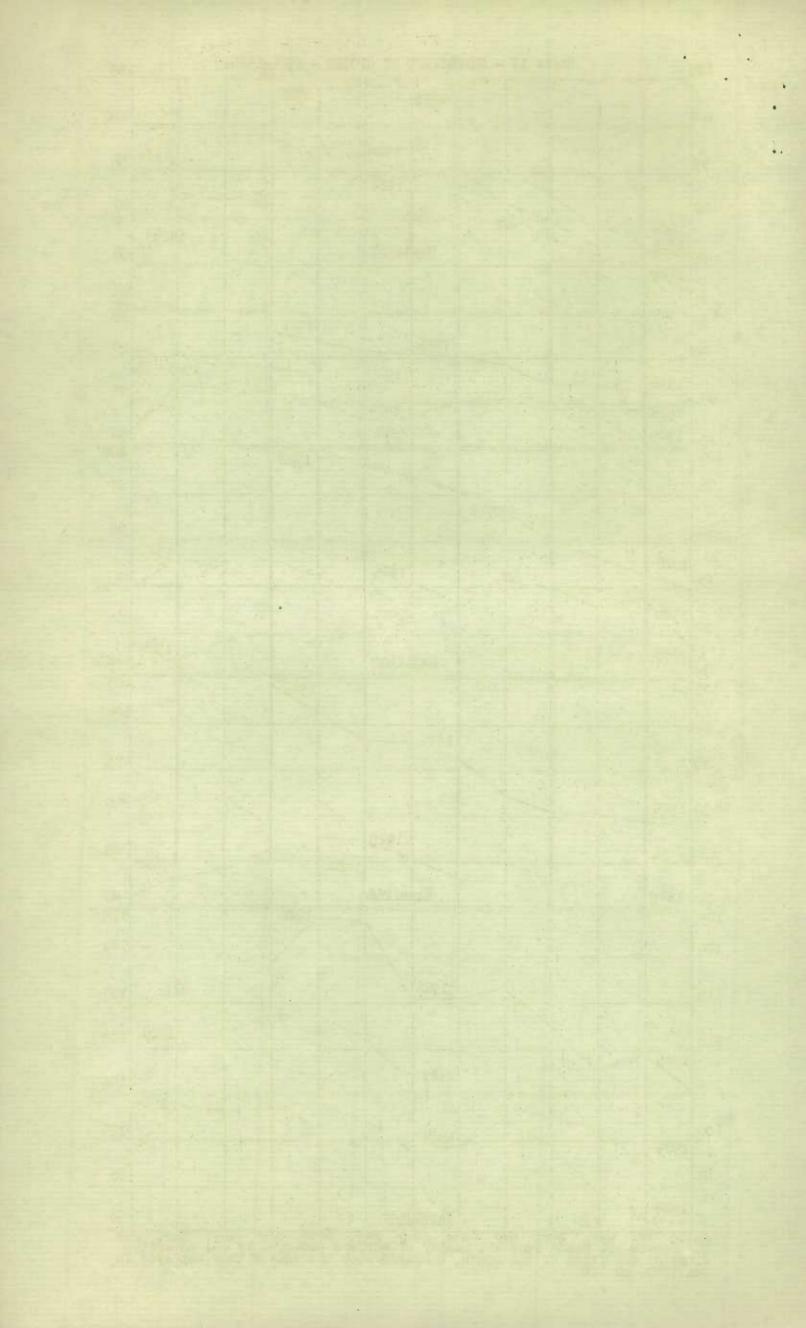

Indox numbers by cities are given in Tables 2 and 5, while Chart II shows the course of employment in several of the leading cities since 1924.

EMPLOYMENT BY INDUSTRIES

Manufacturing. - After eight months of uninterrupted expansion, employment in manufacturing showed a comparatively small decline on Oct. 1; this was chiefly due to seasonal losses in lumber mills and fish canneries, together with reductions in pulp and paper and iron and steel, particularly in vehicle works. In the last named, a large share of the curtailment was in accordance with the pre-arranged plan of large railway car shops, in which employment in 1926 has been at a higher level than for several years. On the other hand, boot and shoe, edible plant, textile and electrical apparatus factories registered important increases. Statements were compiled from 3,825 manufacturers employing 476,429 operatives, compared with 477,569 in the preceding month. The index number continued to be higher than on the same date in any other year since 1920.

Logging. - Seasonal activity in bush work caused the addition of 3,639 men to the staffs of the 203 logging firms making returns, who had 18,133 employees. Rather larger gains were noted on Oct. 1, 1925, when employment was in somewhat greater volume.

Mining. - Further pronounced expansion was indicated in coal mining, while there were also slight increases in metallic ore mining. A combined working force of 44,995 persons was employed by the 204 reporting operators; this was 1,416 more than they had at the beginning of September. Employment in mining was more active than in any month of last year.

Transportation.— Steam railway and water transportation registered decided improvement, while street and electric railways and cartage were slacker. The result was an increase of 2,876 persons in the staffs of the 272 co-cperating employers in the transportation group, who had 117,762 workers on Oct. 1. The situation was more favourable than in any menth of 1925 or 1924; on Oct. 1 of both those years, rather smaller gains were indicated.

Construction and Maintenance. Building, highway and railway construction recorded seasonal losses; but employment continued to be better than in any other year of the record, which was begun in 1920. The 497 contractors whose returns were received had 106,989 employees, compared with 112,387 at the beginning of September.

Services. - Summer hotels again released help, owing to the close of the season, while laundries were somewhat busier. Data were received from 174 employers in the service group, with 15,633 workers as compared with 16,323 in the preceding month. Employment was at a higher level than on Oct. 1 of any other year of the record.

Trade. The additions to staff registered on Oct. 1 were the largest ever recorded on that date and caused the index number to be higher than in the autumn of any year since 1920. A combined working force of 60,016 persons was employed by the 560 establishments making returns; on Sept. 1 they had 58,409 employees. The bulk of the gain took place in retail stores.

Table 3 gives index numbers in some 60 industries.

EMPLOYMENT IN OTHER COUNTRIES

The following notes on employment in the United Kingdom are taken from the latest available issue of the British Labour Gazette; the extracts respecting conditions in the United States are taken from the latest official reports received.

UNITED KINGDOM. - Employment in August showed slight improvement, partly due to increased supplies of imported fuel, but remained bad on the whole. Among the work-people, numbering approximately 11,900,000, insured against unemployment under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed on Aug. 23, 1926, was 14.21 as compared with 14.61 on July 26, 1926, and 12.1 on Aug. 24, 1925. Among the members of reporting trade unions, the percentage unemployed was 13.3 at the end of August compared with 13.2 at the end of July, 1926, and 11.4 at the end of August, 1925.

UNITED STATES

NEW YORK. - Employment in New York State factories showed a 2.5 p.c. increase during September as compared with August. There were important increases in the metal, clothing and textile industries, while employment declined in railroad equipment, building material and a few other plants.

ILLINOIS. - Employment in Illinois during September showed an increase of 2.2 p.c., the situation being more favourable than at any time since May, 1924. The iron and steel and other metal, wood product, fur, chemical, oil and paint, textile, food, beverage and tobacco groups showed increased employment, while there was a falling off in the building material, boot and shoe and clothing industries.

WISCONSIN. - The index number of employment in manufacturing in Wisconsin (Jan. 1922 = 100) stood at 134.0 in August, 1926, as compared with 133.9 in the preceding month and with 132.1 in August, 1925. The metal, wood, rubber, leather, paper, light and power, printing and publishing indexes were higher than in July, 1926.

^{1/} Not including striking coal miners.
