## EMPLOYMENT SITUATION

## 1940

(As reported by employers having 15 or more employees)

Note:- Statements relating to unemployment as reported by trade unions, and to the operations of the employ. ment Service of Canada, together with the statistics of the present Bulletin, are published in the Labour Gazette, the official journal of the Department of Labour, Canada.

OTTAWA

## THE OOTORER ENPIOYMENT SITUATION

Dominion Statistician :<br>In Charge Employment Statistics:<br>R. H. Coats, LL D. F R S, C., FiS,S, (Hon.)<br>M. E: K. Roughsedge

## General Summary

Industrial employment showed further substantial improvement at Oct 1, according to statements received by the Dominion Bureau of Statisiics from 12,304 firms, whose staffs aggregated $1,335,705$ personsy as compared wi.th $1 ., 290,530$ in the precading month. This increase of 45,175 workers, or $35 \mathrm{p} . \mathrm{c}$, was the lergest indicated at the beginning of October in any of the twenty years for which data are now available.

The crude index, based on the 1926 average as 100 , rose from 13.16 at Sept. 1 to a new high of 136,2 at Oct. 1 , when it was 11.9 p c. above the Oct 1, 1939, figure of 121.7 The previous maximum index for October had been that of 1257 in 1937, while in 1929, the figure was 125.6.

In the years, 1921 1939, the average change at the beginning of October has been an inorease of rather less than one p.c. Since the expansior at the latest date considerably exceeded this average advance, the beasonally adjusted index also shomed an important gain, rising from 126.5 at ept. 1, 1940, to 129.6 at 0nt. 1, 1940. It was then higher than the corrected figure for any other month of the record.

The response of Canadien industry to the demands mede on it during the finst year of the war is shom in the record of employment during the last, twelve months. During mnst of this period, the movement has been decidedly upward, while the only general losses were those of a seasonal character reported list winter. The Oct. I. 1940, index, at 136 .2. was, as already stated, nearly twelve p.c. higher than at the same date in 1939, and was $23 \frac{1}{2}$, p c. above the average for October in the years, 1927. 1939.

The outstanding feature of the situation since the outbreak of hostilities has been the great expension in manufacturing, in which activity in recent months has risen to urprecedented levels. The index for Oct. 1, 1940, was 20 p c. above that for the same date in 1939, while the increase in the personnel of the co-operating manuifacturers during the year may be ectimated at some 125,000 men and women; of these, over 56,000 have been absorbed into the iron and steel indus tries. The Jatest index of employment in manufacturing was over 36 p c . above the average index for Oct. 1 in the years, 1927 39

The industrial distribution within the manufacturing division has undergone considerable change; thus the proportion of workers engaged in the production of durable goods has risen from 396 per 1,000 in October of last year to 443 in the latest report. In the seme period, the number of employees on the payrolls of factories tuming out non durable goods has fallen from 604 per I, 000 last autumn to 55 ? at 0ct 1, 1940. This variation in industrial distribution is associated wfoth an fanrease of 329 p.c. during the twelye months in those employed in the manufacture of durable gonds, as compared with that of 93 poce in the non durable classes.

Most of the non manufecturing industries have also show heightened activity in the first year of the war. The logging, mining, comunications, trarsportation, services and trade divisions have reported considerable gains; the only exception has been the construction group as a whole. The lag in this industry is due to curtailment of unemployment relief projects and other work on the roads which can be postponed for the duration of the war, while building has shown marked improvement, the 0rt. 1. 1940, index being some 55 p.c. higher than that for the same date in 1939.

An analysis of the data for Oct. I shows widespread gains over Sept. 1, 1940, both geographically and industrially. Employment advenced considerably in seven of the provinces, the exceptions being New Brunswick and Manitobs, where small declines were reported. The mast marked improvement was in quebec and Ontario.

There was an exceptionally large increase over the preceding month in manufacturing, the establishments furnishing statistics reporting some 27,700 additional emplnyes; this increase of $3.9 \mathrm{p} . \mathrm{c}$. was decidedly greater than in any earlier october and has, in fact, rerely been exceeded in any month in the years since 1920. The most noteworthy expansion at the date under review took place in iron and steel, fruit and vegetable preserving and textiles.

Among the non manufacturing industries, logging, mining, building and trade reported greatily increased activity, while shipping, highway and reilway construction and maintemance and services showed curtailment, the largest decline being in road work. The expansion in logging and trade exceeded the average in the experience of past years, while that in mining was below normal.

A fuller analysis of the eituation in the various industries as at, Oct. 1,1940 . is given following the text, dealing with conditions in the economic areas and the leading cities; the attention of those interested in a comparison of the rituation in some 60 industries at Ont. 1,1940 , with recent Octobers, may be drawn to the table of indexes on page 17.

The records show that for Oct. 1, 1939, 11,891 employers had reported payrolls aggregating $I_{0} 186,786$ workers, or 20,544 more than at $S_{\text {ept. }} 1$; improvement had then been indicated in manufacturing, logging, mining, transportation and trade, while employment in construction and services had declined

The unadjusted index, (based upon the average for the calendar year 1926 as 100), has been as follows at Oct. I in recent years: 1940, 136.2; 1939, 121.7, 1938, 116.7, $1937,125-7 ; 1936,110.1 ; 1935,106.1 ; 1934,1000 ; 1933,90.4 ; 1932.86 .7 ; 1931$, $103.9 ; 1930,1162 ; 1929,125.6 ; 1928,118.8$ and $1927,110.3$.

## EMPLOYMENT IN FINANCIAL INSTJTUTIONS.

For some months, statistics of employment have been collected from banks, truat companias and stock market operators. For Oct. I, 403 firms and branches in these Iings of business reported staffs aggregating 33,689 persons, compared with 33,810 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging mining, transportation, communications, constmaction, service and trade industries bring the totel number of employees included in the oct, 3 survey of employment to $1,369,394$, in 12,708 establishments and slightly lowers the index of 136,2 in the industries above enumerated, to 135.5 ; when the employees of the cooperating finanial organizations were added to the figures for Sept 1, 1940, the index was lowered from 131.6 to 131. 0 . The Oct. 1, 1939, index had stond at 121.7 without the figures from financial institutions, and at 121.3 when they were included.

## ESTIMATES OF TOTAL NUMBER OF WGGE EARNERS IN EGPLOYMENT AND UNEMPLOYED.

The Social Analysis Brannt of the Dominion Bureau of Statistios prepares monthly estimates ${ }^{*}$ of the total number of wage-earners, of those in amployment and those un emplnyed throughout the Dominion. The estimates are based ypon the census definition of wage earners as one who has or has had a job from an employex in any field of work, including the foliowing and all other classes of industrys. agriculture, fishing, trapping, forestry, mining, manufacturing, construction, transportation, commications. trade, "fyame and services professionsi, public, domestics personali, etc y eto Also according to the definition given in the census volumes the unemployed are those who haye at one time had gainful employment bat are no longer enployed. This definition automatically excludes young persons just leaving schnol and others who have nestr had a job; persons who have retired; those living on income, those reportirg thenselves at the census in the class, "No occupation"; employers and persons working on their own account are also excluded.

It.may be noted tart the estimated number of wage earners shows some variation from month to month, the figure expanding or contracting in response to seasonal, secular and cyclical influences. The variation is largely at the expense of the morkers slassed as "on their own acsount" it is, however also true that when employ. ment is active, either generally or in a particuler industay persons not, normally belonging to the wage earning class (In the broad sense of the word). will take positions later to retire therefrom without actively seeking work at other periods, and without experiencing the privations frequently associated with unemployment. An illustration of such cases may be found during the caming season, when woxk of this nature will cail forth a considerable body of workers who do not ordinarily look for amployment outside their homes in.other parts of the year; another example is the employment of students and others in summer hotels during the active season, and in retail trade during the Christmas rush.

[^0][^1]The following table shows, in thousands, the estimeted total number of wageearners, and of those employed and those unemployed, in recent months, together with figures for August in the period, 1928-1939:-.

| Ausust | Total Estimated <br> Number of Wage-earners (in thousands) | Estimated Number of Wage-earners in employment (in thousinds) | Estimeted Number of Wage-earners un-employed $\qquad$ <br> (in thousands). |
| :---: | :---: | :---: | :---: |
| 1928 | 2,465 | 2,438 | 27 |
| 1929 | 2,647 | 2,599 | 48 |
| 1930 | 2,759 | 2,395 | 364 |
| 1931 | 2,611 | 2,201 | 410 |
| 1832 | 2,459 | 1,815 | 644 |
| 1933 | 2,483 | 1,872 | 611 |
| 1934 | 2,515 | 2,035 | 480 |
| 1935 | 2,566 | 2,114 | 452 |
| 1936 | 2,592 | 2,206 | 386 |
| 1937 | 2,781 | 2,536 | 245 |
| 1938 | 2,746 | 2,378 | 368 |
| 1939 | 2,793 | 2,461 | 332 |
| 1940 | 2,910 1/ | 2,709 2/ | $2013 /$ |
| Jan. 1940 | 2,732 1/ | 2,355 2/ | 377 3/ |
| Feb | 2,725 1/ | 2,338 2/ | 387 3/ |
| Mar. | 2,695 1/ | 2,304 2/ | 391 3/ |
| Apr. | 2,720 1/ | 2,353 2/ | 367 3/ |
| May | 2,794 1/ | 2,489 2/ | 305 3/ |
| June | 2,843 1/ | 2,568 2/ | 275 3/ |
| July | 2,872 1/ | 2,634 2/ | 238 3/ |
| Aug. | 2,910 1/ | 2,709 2/ | 201. 3/ |

The total estimated number of wage-earners increased by some 38,000 between July and Aucust; the figures for these two months were higher than in any other month for which an estimate has been made: The estimated number in employment, at 2,709,000, was also greater than in July, 1940, or any earlier month for wich an estimate has been prepared.

The estimeted number unemployed was 201,000 , a derrease of 37,000 from the preceding month, and of 131,000 from August, 1939; the latest figure was the lowest, for Ausust in any year since 1929.

1/ Includes enlisted men who were previously unemployed wage ear ars.
2 / Exclusive of enlisted men.
3/ Including a con ia rable number of enlisted men who wer e previously unemployed wage-earners.

## EMPLOMMENT BY ECONOMIC AREAS.

There was considerable improvement in seven of the nine provinces; New Brunswick and Manitoba, both showing moderate losses, were the exceptions to the generally upward movement. The greatest gains were those of 18,204 persons, or 4.7 p.o.s in Quebec and 23,976 , or 4.4 poca, in Ontario. These additions to the personnel were the largest ever reported in those provinces at Oct. 1. Employment generaily was brisker than at the same date of last autum. In the Maritime Provinces, the index was higher than in any other month since the latter part of 1937, in the Prairie area. the favourable comparison goes back to 1931, while in Queber, Ontario and British Columbia employment was at its maximum for any month in the almost twenty years for which statistics are ovailable.

Maritime Provinces A further increase was indtcated in Prince Edward Island and Nova Scotia, but there was a falling off in New Brunswick; the tendency in the Maritime Provinces as a whole, however, was favourable。 The 863 co-operating emplofers enlarged their payrolls from 94 ,661 persons at sept. 1.9 to 95,346 at the beginning of actober. This gain was not so large as that indicated at the same date of last autumn, but it compares favourably with the small decline reported, on the average, in the Maritime area at Oct. I in the ycars since 1920. The index, at 128.2 at the latest date, was over ten points higher than at Oct. 1, 1939; it was also higher than in any other October of the record, except that of 1937

Manufacturing as a whole showed a considerable advance at the date under review, mainly in iron and steel. Vegetable food, pulp and paper and some other plants were also busier, while animal foods recorded seasonal curtailment. Among the non manufacturing groups, logging and trade afforded more employment; there were, however, raductions in transportation, construction and services.

The 832 firms furnishing data for Oct. 1, 1939, had employed 87,208 men and women, or 1,159 more than in the preceding month.

#### Abstract

- Quebec.- Another important gain was reported in Quebec, where industrial activity reached a new maximum. There were large increases in manufacturing, (notably of food, chemical, non-ferrous metal, electrical apparatus, textile and iron and steel products) and in logging, shipping, building and trade. Mining and quarrying, services, communications and railway and highway construction, on the other hand, were quieter, but the losses in employment were generally moderate. Statistics were compiled from 3,083 establishments in Quebec with 409,310 workers, compared with 391,106 at the beginning of September. The index rose from 136.4 at Sept. 1, 1940, to 1428 at the date under review, as compered with 126.4 at Oct.1., 1939. Returns were then tabulated from 2,950 firms having 360,815 persons in their employ, a decline of 6,131 from their preceding report

Ontario.- The trend continued decidedly upward in Ontario, according to 5,332 employers of 562,807 men and women, or 23,976 more than at the beginning of September. These additions to the staffs were decidedly larger than those report ed at Oct. 1 in 1939, or any other year for which information is available. The index rose from 134.8 in the preceding month, to 140.9 at the date under review; this figure, which constituted a new high, was 16.1 p.c. above that of Oct. 1,1939.

There were important advances in manufacturing at the beginning of October, 1940, most industrial groups sharing in the expansion. The largest gains were in the vegetable food and iron and steel divisions, but there was also heightened activity in textile, beverage, chemical, pulp and paper, electrical apparatus, non ferrous metal and other classes. On the other hand, lumber and miscellaneous non-metallic mineral products showed some slackening.

Chart 3

Among the non manufacturing industries, logging, mining, building and trade recorded decided improvement, but there were contractions in shipping, hotels and restaurants, laundries and dry-cleaning businesses and highway and railway construction and maintenance.

For Oct. 1, 1939, 5,195 establishments had reported a staff of 482,631 , as compared with 461,991 in the preceding montb. The index then stood at 121.4, substantieliy below the latest figure of 140 g.

Prairie Provinces. There were increases in Saskatchewan and Alberta, but, employment in Manitoba was rather quieter. An analysis of the returns by industry in the Prairie Provinces as a unit shows heightened activity in manufacturing, (mainIy of vegetable food and textile products), and in mining transportation, building construction and trade, while botels and restaurants and highway construction released some employees. Returns for the date under review were received from 1,730 firms with an aggregate working force of 154,883 persons, compared with 153,482 at Sept, 1. The index at the latest date, 118 , was the highest for any month since November, 1931, being slightly above that for the beginning of October in 1939, when the $1.8^{\prime}$ co-operating employers had reported 151,713 men and women on their payrolls, compared with 148,699 in the preceding month.

British Columbia Employment in British Columbia showed marked improvement. chiefly it lumber, vegetable food and iron and steel factories, and in building and trade, On tho other hand, coal mining, transportation, hotels and restaurants, high way and rallway construction and maintenance indicated lowered activity. Data were tabulated from 1, 296 firms, whose staffs rose from 112,450 at Sept, 1 , to 113,359 at the beginning of October. A larger advance had been noted at Oct 1 , 1939, but the index, at 118.7, was then much lower than at the date under review, when it stood at 127 . An aggregate working force of 104,419 men and women wes reported by the 1,227 employers fumishing statistics for Oct. 1,1939 ; this was an increase of 1,862 from their Sept. 1, 1939, staffs.

Tables 1 and 5 give indexes by economic areas, while Chert 3 shows the course of employment in these areas since 1935

## EMPLOYMENT BY CITIES.

The trend at the beginning of October was upward in Montreal, Quebec City, Toronto, Ottawa. Hamilton, Windsor and Vancouver, while there was a slight decline in Winnipeg ${ }^{2}$ loyment in each of these centres was decidedly more active than at Ont. I, 1939. In Montreal, Quebec, Toronto and Vancouver, the indexes were also higher than in any other month for which information is available; in Ottama, the favourable comparison goes back to 1930, while in Hamilton and Findsor, the volume of employment reported exceeded that in any other period of the record, with the exception of two months in 1929.

Montreal.- There was a further large increase in the number at work in Montreal, where the 1,795 co operating establishments employed 190,684 persons, or 7,204 more than at Sept. l. Manufacturing on the whole wes much brisker, there being considerable gaing in iron and steel and textile plants, together with smailer increases in food, tobacco, leather, electrical apparatus, non ferrous metal and some other lines. Pransportation, construction, services and trade also afforded more employment.

Improvement on a smaller scale had been noted at the beginning of October of last year, when the index stood at 110.2 , compared with 122.4 at the latest date; this is the highest figure recorded up to the present. For Oct. 1, 1939, statistics hed been furnished by 1,715 firms having 171,034 employees, compared with 169,628 in the preceding month.

Quebec. - Continued expansion in industrial activity was indiceted in statistics received from 218 employers with a staff of 20,156 , or 81.2 more than at Sept.. l. There were losses in services and shipping, but building, trede and manufacturing afforded more employment; the increase in the last-named took place mainly in textile and chemical plants. The index, at 144.7 , was many points higher than at the beginning of October, 1939, when 210 establishments had reported 15,509 men and momen on their paylists.

Toronte.- Further improvement was reported in Toronto, resulting in a new, all time high index of employment. Statements were tabulated from 1.428 firms employing 172,986 workers, compared with 167,166 in their last report. Manufacturing showed very marked gains, particularly in the metal, electrical apparatus, textile, vegetable food and printing divisions. Building construction and retail trade also absorbed more workers. Much smaller additions to staffs had been made at Oct. 1 of a year ago, when 1,761 employers had reported a comoined working force of 146,697 persons; the index had stood at 114.1 , or $16.6 \mathrm{p} . \mathrm{c}$. below the latest figure of 133.0

Ottawa.- Manurecturing and trade were rather more active, while other in dustries showed little change on the whole. The forces of the 237 establishments furnishing data aggregated 17,335, or 457 more than at Sept. 1.1940 A smaller in crease had been recorded at the same date in 1939 by the 231 co operating firms, whose payrolls had included 15,063 workers; the index of employment was then con siderably lower than the latest figure of 127.8 , which was the highest since 1930 .

Hamilton Important expansion was indicated in Hamilton, mainly in manu facturing, where there was improvement in food, electrical apparatus end iron and steel factories, that in the last-named being particularly pronounced. Building and trade were alsa busier, while other industrjes showed little general change. Statements were tabulated from 335 businessmen with 43,478 employees, compured with 42,312 in the preceding month. A substantial increase in personnel had also been reported at Oct. 1 last year by the 331 employers whose statistics were then received, and who had a staff of 35,265 . The index calculated from their returns was decidedly lawer than that of 133.2 at the date under review, when it was higher than in eny preceding month since the summer of 1929.

Windsor - There was a marked increase in the number working in Windsor, chiefly in automobile and other iron and steel plants. One hundred and ninety-five concerns employed 24,558 persons, as against 23,386 at Sept. I。 A larger advence had been indicated at the beginnirg of Ontober of last year, when the 196 co operating establishments had 17,260 employees. The index of 124.8 at Oct. 1, 1939, was many points lower than that of 177.6 at the date under review; the latter has only once been exceeded since the record for Windsor was commenced in 1925.

Winnipego- A slackening was shown in Winnipeg et Oct. l, when the 537 firms furnishine data employed 46,107 men and women, or 114 fewer than in the preceding month. Manufacturing, building and some other industries were more active, but road work and communications released some workers. Improvement had been recorded at the beginning of October a year ago by the 529 employers whose statistics were received, and who had 43,112 workers on their paylists; the index then, however, was several points lower, standing at 98.8 , as compared with 105.3 at Oct, 1, 1940.

Vancouver .-. Amployment in Vancouver at Oct. I was brisker than in the pre-ceding month, establishing a new maximum for the period since 1922, when the record for Vancouver was commenced. Informetion was tabulated from 563 firms with an aggregate staff of 44,035 persons, compared with 43,824 at Sept: I. Manufacturing, particularly of lumber and vegetable foods, reported improvement, and trade also
afforded more employment; transportetion, construction and services, however, showed moderate curtailment. A general reduction had been indicated at the beginning of October 1939, when the index stood at 115.8 , as compared with 129.5 at the date under reriew. Statements for Oct. 1 of last year had been received from 523 establishments, whose employees had numbered 38,689 .

Index number's by cities are given in Tables 2 and 6.

## BMPLOMMENT BY INDUSTRIES.

Manufacturing As already stated, there was very pronounced expension in employment in factories at Oct. 1, when the 6,744 co operating establishments reported a staff of 739,945 persons, or 27,664 more than in the preceding month. This in crease of $3,9 \mathrm{p}, \mathrm{c}$. has seldom been exceeded in any provicus month of the record; the comparatively fow exceptions are almost entirely the gainsindicated at Feb. 1 in several years, which represented partial recovery from the usual, year end losses. The index. $(1926=100)$, rose from 133 at Sept 1 to a new all-time maximum of 143.8 at Octo 1, when it was 20 p.c. above the figure of 119.7 at the sume date of last year.

On the average, employment generally in manueacturing sit the beginning of October in the period, 1921-1939, has show only a slight advance, the tendency having been downard in nine, and upward in ten of these years. The unsually large increase at the date under review therefore resulted in an important gain in the seasonally adjusted index, which rose from 134.6 in the preceding month, to 139.4 at Oct. 1; this was the highest seasonally corrected figure on record.

The most important expansion at Oct 1, 1940, was in textile, vegetable food and iron and steel, which showed gains rarely exceeded in any previous month; the persons added to the reported payrolls of firms in these industries aggregated 4,766, 9,359 and 10277 , respectively. Heightened activity was also indicated in the leathex, lumber, puip and paper, beverage, chemical. electrical apparatus, non ferrous metal and other manufacturing divisions, and in central electric stations. The only exception to the generally upward movement was in edible anipal products, in which there was moderate seasonal curtailment.

The manufacturers making returns for the beginning of October of last year, numbering 6,468, had employed 613,558 men and women, compared with 591,324 in the preceding month.. The most marked gains had then also been reported in vegetable food, textile and iron and steel factories.

The unadjusted index numbers in manufacturing at the beginning of october in recent years, based on the 1926 average as 100 , are as follows: 1940, 143. 8; 1939, 119.7 ; $1938,112.5 ; 1937$, 121.7 ; $1936,109.0$; 1935, 103.3 ; 1934, $94.4 ; 1933,86.7$; 1932, 84.1 ; 1931, $91.8 ; 1930,107.8 ; 1929,120.2 ; 1928,115.7$ and 1927. 106.4.

Logging - Statements were tabulated from 393 logging companies, whose payrolls were enlarged by 15,793 men to 53,357 at Oct。1。 This seasonal expansion was on a rather smaller scale than that indicated in the exrly autumn of last year, al. though it exceeded the usual gain from September to October in the years since 1920. The index, at 180,2 at the latest date, was decidedly higher than at Oct. 1 in 1939, or any other year of the record except 1937

Mining Improvenent was reported in coal-mining and in the extraction of metallic ores, while quarries and other industries in the non-metallio mineral division showed a small decline. The working forces of the 423 co operating mine
operators included 80,912 persons, compared with 80,031 in the preceding month. This seasonal gain was smaller than that noted at Oct. 1,1939 , but employment then was at a slightly lower level than at the date under review. The situation in mining al.so continues rather more favourable than in the early autum of any other year for which statistics are aveilable。

Cormunicationso- There were seasonel reduntions in the personnel of telephone end telegraph companies; the employers fumishing data in the commuications division reported 24,235 workers, compared with 24,608 at Sept. $1_{n}$ The index, at 90.7 , was some three points higher than at the same date in 1939, when a small increase had been noted in communcations as a whole.

Transportation - Shipping and steam railwey operation showed a falling-off, while employment in the electric railway, cartage and storage division was more active; statistics were received from 534 companies and branches in the transportation group, with 114,933 men and women on their staffs, as against 115,367 in their last return. The decrease, most of which took place in shipping, was contra seasonal. An exceptionElly large increase had been reported at Dct. 1, 1939, which had been partly due to the appointment of guards for the prevention of sabotage following the outbreak of war. The indek of employment in the transportation group was then fractionelly higher than the latest figure, which, with that exception, was the highest for october in any ar ar since 1931.

Construction and Maintenance. No general ahange was shown in this division, the decline in reilway and highway construction and maintenance at the beginning of october being elunost entirely offset by an advance in building. A combined force of 147,112 persons was employed by 1,393 co operating contractors, who had 147,140 on their payrolls in the preceding month. Considerable shrinkage had been recorded in constmaction at Oct. I of a year ago, but, owing to the greater activity then existing in road work, the Oct. 1, 1939, index for this group was some ten pointis higher than that of 121.1 at the latest date, when employment in both building and rail construction was in decidedly greater volume.

Services - The closing of summer hotels caused a pronounced loss in amployment, and leundries and dry-cleaning establishments were also alacker The staff of the 599 firms whose returns were received totalled 32,583 at Oct, 1 , as compared with 34,73 ? at the beginning of September. The seasonal falling-off indicated at the correspond ing date of last year had involved a larger proportion of the aggregate payroll, and the index was then over eleven points lower than at the beginning of October of the present year, when it stood at 147.3 .

Trade ${ }^{-}$There was a substantial increase in this division, chiefly in retail stores, although wholesale houses were also more active; 2, 333 trading establisiments reported 142,628 employees, compared with 138,802 in the preneding month. This advance exceeded that recorded et Oct. 1 of 1939, and was also much greater than the averege gain noted at the beginning of October in the years, 1921.1939. The index, at 146.8 at the latest date, was some eight points higher than at Oct. I of last autumn.

Index numbers by industries are given in Tables 3 and 4.

## EMPLOIMENT IN GREAT BRITAIN.

According to The Ministry of Labour Gazette, there was a decrease of 27,814 in the number of unemployed persons on the registers of Employment Exchanges in Great Britain at Aug. 12 as compared with July 15; the number of adults registered as unemployed was lower by nesrly 50,000 , but the number of boys and girls rose by nearly 22,000 , owing

Wote: The "Relative Weight", As given just above, Bhows the proportion of amployees in the indicated area, to the total number of all employees reported in Canada by the firms maldng returns at the date under review.
mainly to the registration of juveniles leaving school at the end of the summer term. The total of 799,452 persons registered as unememployed at Aug. 12, was 432,240 less than the figure for Aug. 14, 1939; this total included those temporarily unemployed. The number wholly unemployed at Aug. 12, 1940, was 613,156. Recent press dispatches state that the number wholly unemployed at Sept. 16 was 613,671.

## EMPLOMMENT IN THE UNITED STATES.

(These notes are based on the latest officjel reports received.)
A report recently issued by the United States Department of Labor shows that employment in non-agricultural industries in September, 1940, was at an exceptionally high level, following an increase of more than 600,000 jobs between August and September, an increase which followed a gain of 400,000 jobs betrieen July and August. While employment usually expands in the summer and early autumn, the gain this year is one of the lergest ever recorded. Successive increeses in employment have been indicated since the winter low point in Februery. Nearly 2,000,000 persons returned to work this year between February and September. More than 36,000,000 men and कomen were working in non-agriculturel employment in September, apart from 2,242,000 working on CCC, WPA, end NYA tasks.

The mejor factor contributing to the current gain of 600,000 workers was the rise in emplyyment in factories; this was about half again as greet as the usual seasonal increase. Over 285,000 factory wage eamers were returned to jobs in September, a gain which was accompanied by a rise of 5.4 p.c. or or $\$ 10,700,000$ in weekly wages. The latter increase is about five times the customary payroll increase of one p.c. from August to September With few exceptions, the September gains in factory employment and payrolls are the largest aggregate increases in any single month since 1919.

As in the preceding month, the increases in factory employment and payrolls were widespread. Of the 90 menufacturing industries regularly surveyed, 76 reported mose workers, and 77 larger payrolls.

The index number of employment in manufacturing, based on the 1923-25 average as 100 , stood at 107.2 in September, 1940, as compared with 100.2 in September, 1939. The latest figure for the durable goods was 104.8 , and that for the nondurable, 109.5, compered with 89.8 and 110.2 , respectively, in Septomber of last year.

The expansion of non-agricultural employment in recent months is by no means confined to the defence industries, although the percentage expansion in the primury defence industries has been much greater than in industries that are engaged almost exclusively in supplying civilian needs.

Gains were also reported in other major fields of non-agricultural employment. Wholesale and retail trade, transportation and public utilities, Federul and private construction, mining, the finance, service and miscellaneous groups and government service all reported considerable increases in personnel.

New York - According to the New York State Department of Labor, there was an increase of 3,9 p.c. in employment in factories from the middle of August to the midile of September; the gain was seasonal in character, but exceeded tho average increase between those months in the experience of the years since 1913. The level of employment was higher than in any other month since November, 1929.

1/ Proportion of emoloyees in indicated industry within a city, to the total number of employees roported in that citv by the fisme maldic returns for the date under review.

[^0]:    It should be noted that the information available does not, permit allowance to be made in these calculations for enlistments in the armed forces slice the outbreak of mar . Thus the estimates of the totel number of wage eamers inolude some en listed men who were unemployed wage earners prior to enlistment. The estimates of wage earnexs in employment are entirely exclusive of enlistod men, but the estimates of unemployed wage earners include a considerable number of previously unemployed wage earners who have now enlisted Since enlisted men are not in cluded as wage eamers, there is in these figures as overstatement of the totai number of wage earners and also a corresponding overstatenent of the number of unemployed wage earners. Accordingly, the estimates of unemplnyment in recent months are exaggerated by the number of enlisted wage-eamers who were without jobs when they joined the active forces. Such factors as unrecorded emigration within the lest year or two may have an effect on figures based on the Census, which is now nine years away; no adjustment can be made for these factors.

[^1]:    * See Census Monograph No, 11, entitiled "Onemployment".
