## THE

## MARCH

## EMPLOYMENT SITUATION

1940
(As reported by employers having 15 or more employees)
Note:- Statements relating to unemployment as reported ar TRADE UNIONS, AND TO THE OPERATIONS OF THE EMPLOY aMENT SERVICE OF CANADA, TOGETHER WITH THE STATISTICS OF THE PRESENT BULLETIN, ARE PUBLISHED IN THE LABOUR Gazette, the official journal of the Department of Labour, Canada.

Published by Authority of the HON. W.D. EULER, M.P.,
Minister of Trade and Commerce.

OTTAWA

OTRANA - CANADA.

Issued April 1, 1940
THE MARCH EMPLOYMENT SITUATION.

Dominion Stritistician:
In Charge Employment Statistics:
R. H. Coats, LL.D., F.R.S.C., F.S.S. (Hon.)
M. E. K. Roughsedge.

## GTMERAL SUMMARY.

Returns tabulated by the Dominion Bureau of Statistics from 11,899 employers throughout Canada show that there vas a slight slackening in industrial employment at the beginning of March, marked improvenent in manufacturing being offset by shrinkage in some of the non-menufecturing industries, notably logging, for which the active season in many districts is drewing to a close. The reported staffs of the co-operating establishments aggregated $1,109,443$, compared with $1,118,003$ at Feb.l. This decrease of 8,560 employees slightly lovered the unadjusted index number from 114.4 at $F$ eb. I to 113.5 at Me.r. I, when it was higher than in any other March for Which statistics are available; at the same date in 1939, the figure had been 106.5, while at Mar. l, 1929, the previous meximum in the record of twenty yerrs, it was 111.4. These indexes are calculeted on the 1926 everage employment of the reporting firms as 100.

In the period, 1929-1937, upon whose experience the seasonal variation factors are calculated, the trend at Mar. I was very slightly downard; the reduction at the latest date rather exceeded this average decrease, with the result thet the seasonallycorrected index fractionally declined, falling from 118.8 at the beginning of February, to 118.3 at inar. 1, 1940. This was the highest adjusted figure for that date in the twenty winters for which statistics are now available.

Considerable improvement was reporteả in menufacturinc at Mar. 1, 1940, when employment was at a higher level then in eny other monich of the record. The index $(1926=100)$ stood at 122.6 , compared with the 1939 high of 122.2 at Dec. 1, and 122.1 at Nov. 1, rhile the previous meximum figures were those of 121.7 at $0 c t .1,1937$, and 121.6 at fug. 1, 1929. The advence in menufacturing at the latest date was rather greater than the average at the beginning of March in past years, end largely exceeded that recorded at Mer. I of last winter. The most pronounced increeses from Feb. 1,1940, were in textile and iron and steel factories, but there were also important gains in tobecco and non-ferrous metal products. kmong the non-manufadturing industries, logging, mining, trensportation, construction and meintenance and trade showed reduced activity; the loases, mainly of a seasonal character, were most pronounced in the logging and construction divisions, the numbers released by the erployers co-operating in these classes being 14,179 and 3,222 , respectively. On the other hand, services reported improvement.

For Mar. 1, 1939, statistics had been received from 11,309 employers with a combined working force of $1,027,846$ persons; the index wes then lower by seven points then that of 113.5 at the latest date. On the besis of a comperison of the index numbers for Mar. 1, 1939 and 1940, it may be estimated that the co-operating establishments employed nearly 69,000 more persons at the latter then et the former date.

The unedjusted index numbers of employment at Mer. I in the yoars since 1927 are as follows:- 1940, 113.5; 1939, 106.5; 1938, 107.8; 1937, 102.8; 1936, 98.9; 1935,96.4; $1934,92.7$; 1933, 76.9; 1932, 88.7; 1931, 100.2; 1930, 110.2; 1929, 111.4 and 1928, 102.6.

A fuller analysis of the situation in the different industriul divisions appears begiming on page 5 .

## IMRPLOYMENT IN BANKING AND INVESTITNT INSTITYTICNS.

For some months, statistics of the employment afforded have been collected from banks, trust companies and stock exchange firms. At the beginning of Mareh, 410 firms and brenches in these lines of business reported staffs aggregating 33,458 persons, compared with 33,479 in the preceding month. The addition of these figures to the

Chart 2.- Employment in Cenada as Reported by Employers in Industries other than Agriculture, 1929 and 1933, and 1935 to 1940.

The curve is besed upon the number of employees at work at the first day of the month as indicated by the firms reporting, in comparison mith the average employment they afforded during the calendar year 1926 as 100 . Curves are plotted for 1929 , the year of maximum industrial activity; for 1933, when emplojment was at its minimum in the record since 1920, and for the years since 1934 .
returns furnished in the manuficturing, logging, raining, transportation, communications, construction, services and trade industries brings the total number of employees included in the Mar. I survey of employment to $1,142,901$ in 12,303 establishments, and slightly lowers the index of 113.5 in the inductries above enumerated, to 113.4 ; when the employees of the co-operating financial institutions were added to the general figutes for

- Feb. 1, the index wes lowered from 114.4 to 114.3. Comparable data for 1939 are not available.

## ESTIMATES OF TOTAL NUMBER OF WAGE-EARNTES IN EMPLOYMENT AND UNE IPLOYED.

The Social fablysis Branch of the Dominion Bureau of Statistics prepares monthly estimates of the total number of wage-eamers, of those in employment and those unemployed throughout the Dominion. The estimates are based upon the census definition of wageearner as one who has or has had a job from an employer in any field of work, including the following and ell other classes of industry:- agriculture, fishing, trapping, fore try, mining, manufacturing, construction, trensportation, comunications, trade, finance and services - professionai, pubiic, domesilc, personal, etc., etc. Also eccording to the definition* given in the census volumes, the unemployed are those who have at one time had gainful employment but are no longer employed. This definition automatically excludes young persons just leaving school and others who have never had a job; persons who have retired; those living on income; those reporting themselves at the census in the class, "No occupation"; employers and persons working on their own account are also excluded.

It may be noted that the estimated number of wage-earners shows some variation from month to month, the figure expariding or contracting in response to seasonal, secular and cyclical influences. The variation is largoly at the expense of the workers classed as "on their orm eccount"; it is, however, clso true that when employment is active, either generally or in a particular industry, persons not normally belonging to the wage-earning class (in the broid sense oi the word), will tike positions, later to retire therefrom without actively seeking work at other periods and without experiencing the privations frequently associated with unemployment. An illustration of such cases mey be found during the canning season, when work of this nature will call forth a considerable body of workers who do not ordinerily look for employment outside their homes in other parts of the year; enother example is the employment of students and others in summer hotels during the active season, and in retail trade during the Christmas rush.

It should be noted that the information available does not permit allowance to be made in these calculations for enlistments in the armed forces since the outbreak of war. Thus the estimetes of the total number of wage-earners include some anlisted men who were unemploy od wage-eamers prior to enlistrnents. The estimates of wage-earners in employment are entirely exclusive of enlisted men, but the estimates of unemployed wageearners include a considerable number of previously unemployed wage-earners who have now enlisted. So, if enlisted men ere not included as wege-earners, there is in these figures an overstatement of the total number of wage-earners and elso a corresponding overstatement of the number of unemployed wage-earners. iccordingly, the estimetes of unemployment in recent months ere exagerated by the number of enlisted wage-earners who vere without jobs when they joined the active forces. Such factors as unrecorded emigration vilhin the last year or two may have an effect on figures based on the Census, which is now nine yeurs away; no cidjustment can be made for these factors.

The latest estimates (for January) show that the totel number of wage-earners who were available for employment in Canada was greater then in January of other years, while the number at work wes also at its maximura for that month. The number unemployed was lover than in any other January in the years since 1930, but was higher then in that month in eurlier years for which estimetes have been prepared. As compared with December, 1939 , there was a seasonal increase of some 13,000 in the estimated number of unemployed in all industries throughout the Dominion; this increase over the preceding month was the same as that estimated in Jenuary, 1939, over December, 1938. The number then estimated as unemployed, however, was over $22 \mathrm{p} . \mathrm{c}$. greater then in Januery of the present year.

The table on the following page shows the latest estimates, together with the figures for Januery in preceding yeers.

## EMPLOMMINT BY ECONOMTC AREAS.

The trend at the beginning of Merch twas upward in Prince Edwerd Island, Nova Scotia and British Columbie, while ectivity ceclined in the remaining provinces, the losses being mainly of a seasonal character. Firms in guebec reported the most pronounced curtailment, as a result of very large seasotal reductions in the personnel of logging camps. Employment generally in cll five economic areas was in greater volume then at Mar. I in any recent year; the latest indexes for the liaritime Provinces, Quebec and Onterio vere at their peak for that date in the period, 192l-39, while in the Prairie Provinces and British Colunbir, the fivourable comparison goes back to 1930.

Maritime Provinces. - There was a decrease in industrial coctivity in the Maritime Provinces taken as a unit, the 826 reporting employers reducing their staffs from 87,776 at Feb. 1, to 86,025 at the beginning oi March. The curticilment took place in New Brunswick, and resulted from the completion of aessonil operations in many logging camps; in Nova Scotia and Prince Idvera Island, however, improvement was recorded. Manufacturing and transportition, on the whole, afforged more employment in the Maritimes, and the trend was elso upward in trade and services. In addition to the large lasses in logging already mentioned, there vere moderate declines in mining, communications and construction. A sme.11 gein had been indicated at Mar. 1, 1939, but the index then was meny points lorer than that or? 116.0 at the date under review, when it was higher than in any other March for which stitistics are available. The follo:ing are the indexes for each of the Maritimes in recent months, together with the figures for Mar. 1, 1938 and 1939:-

Reports for the beginning of March of last year had been tabulated from 812 firms, Whose pryrolls aggregeted 74,366 persons, compered :rith 73,913 in the preceding month.

Quebec.- Bmployment in Quebec showed a. decrease which was larger then that recorded at the beginning of March, 1939, End also rather exceeded the decline which has been the average change between $F$ eb. I anc Mer. I in the last nineteen years. There was marked improvement in manufecturing at the dete under roview, notably in textile and iron and steel plents; on the other henc, construction and maintenance showed curtailment, end there were lirge reductions in logging as the season drew to a close. Statements were tabulz.teci from 2,967 establishments, whose mijloyeas nurabered 327,022, as against 331,993 at the beginning of February. The index, at 114.3 , was slightly higher than at Mar. 1, 1.439, when it stood at 112.3, according to the information furnished by 2,826 employers, with 320,154 persons on their staffs.
1/ Includes enlisted men who were previously unemployed wage-earners. 2/Exclusive of enlistedmen. 3/ Including a considerable number ol enlisted men who were previously unemployed wage-earners.

Ontario.- A slackening wes noted in Ontirio, where the 5,197 co-operating firms released 513 viorkers from their forces, bringing them to 478,003 at Mer. 1. The trend of employment at that date in the years for which statistics are available has frequently, though not invariably, been upvard, and the average change in the years since 1920 hes been a smell increase. The Mer. l index, at 120.0 , was many points higher than at the same date in 1939, when it had stood at 109.1; 4,918 returns hed then been tabulated, showing a personnel of 428,734 men and women.

There wes considerable improvement in employment in factories et the date under review, the co-operating manufacturers having added 3,770 workers to their staffs. The increase took place mainly in textile, iron and steel and lumber plents, while the vegetable food division was slacker. Among the non-manufacturing classes, logging, building, transportation, miningand retail trade showed declines, those of a seasonal character in the first-named being most pronounced. On the other hand, railway construction and maintenance and wholesale trade reported heightened activity.

Prairie Provinces.- Contractions mere indicated in Manitoba, Saskatcheran and Alberta, the loss in the Prairies repeating the domvard trend which has been in evidence in these provinces as a unit at that date in fifteen of the nineteen preceding years for which statistics are available. The latest index, at 98.5, was higher than that of 94.3 at Mar. 1, 1939, although a small, contre-seasonal increase from the preceding month had then been show. Date were tabulated from 1,701 establishments with 128,711 employees at the date under review, compared with 131,630 in their last report. The manufacturing industries reported a moderate reduction, declines in the lumber, pulp and paper and iron and steel divisions rather more than offsetting gains in textile factories. Logging also recorded improvenent, while construction and maintenance, transportation, trade and mining released employees. Indexes for each of the Prairie Provinces in recent months, together with data for Mar. 1, 1939 and 1938, are given below:-

The 1,632 firms making returns for Mar. 1 of last year hid reported 121,539 men and women on their payrolls, compared with 121,150 at the first of February, 1939.

British Columbic.- The production of lumber, pulp and paper, iron and steel and nonferrous metal goods afforded more employment, while other classes showed little general change; activity in manufacturing as a whole considerably advenced, and there was also improvement in logging, but the tendency in most other groups mas noderately domward, the largest losses being in retail trade. The working forces of the 1,208 co-operating employers aggregated 89,682 persons, as compared with 88,088 in the preceding month. This increase exceeded the average gain indicated at Mar. 1 in the period, 1921-1939, and also compared favourably with that reportod at the same date in 1939. The latest index, at 101.8 , was some five points higher than at Mar. 1, 1939, when the 1,121 firms furnishing statistics had employed 83,053 workers.

Index numbers of employment by economic areas are given in Tables 1 and 4.

## RMPLOYTENT BY CITIES.

Employment increased in five of the eight citics for which separcte tabulations are made, Montreal, Quebec City, Torento, Hemilton end Windsor showing improvement, while curtailment wes reported in Ottama, Winnipeg and Vancouver. Industrial activity in each of these cities, except Quebec, was at a higher level than at Mar. 1, 1939, while employment was also brisker in these centres than in the late winter in eny of the preceding seven or eight years.

Montreal. - Heightened activity was shown in Montreal, where there were geins in manufacturing, (chiefly in textile and iron and steel factories), end in construction and maintenance and trade. Statements were tabulated from 1,756 firms employing 168,360 workers, as compared with 164,537 in the preceligmonth. For Mar. I of lest year, 1,652 employers had reported 156,380 men and women on their steffs; the index then hed been lower, standing at 101.4, as compared with 108.1 at the latest date.

Quebec.- Manufacturing afforded more employment, mainly in the chemical and iron and steel groups, while services also showed some inprovement. Construction, transportation

The heavy curve is based upon the number of persons employed at the first day of the month by the firms reporting, compared with the average employment they afforded in the calendar year 1926 as 100 . The broken curve shows this crude curve corrected for seasonal variation as determined by the experience of the years 1929-1937.
and traie, however were cuicter. The workine forces of the 210 co-operating estiablishments totallad 15, (181 persons, compered with 14,863 at Feb. 1, 1940. The index wes much lower than at the same date in 1339, although a rather smeller edvance had then been indicated by the 205 firms furnishing dete, whose employees hed numbered 16,478 .

Toronto.- Activity increused considerably in manufacturing in Tononto, the largest gains being in the textile end iron and steel groups, while there was a decline in electrical epperatus end printing and paper factories. Construction also showed e fall-ing-off. Returns were received from 1,779 employers, with 147,506 men and women on their payrolls at the beginning of Warch, as compared with 146,562 at Feb . 1. The index, standing at 11.4 .6 , was over nine points higher thin at Mer. 1, 1939, when a reduction had bean reported by the i,692 establishments meking retums, whose staffs aggregated 133,514.

Ottewa.- Enployment in Ottawe showed a slackening; menufacturing and building were rather busier, but trade released some employees, while little general change was recorded in other industries. The 228 co-operating firms reported a totul payroll of 14,771 persors at the date uncier reviev, as compared with 14,800 at Feb. I. The index was rather higher than at the beginning of March, 1939, Elthough an upward tendency had then been indiceted by the 223 employers whose dete were tabulated, and who employed 14,277 men and tromer.

Homilton:- A favourable movement was noted in Hemilton, mainly in building and manufecturing; in the latter, the greatest gains were in the textile end clay, glass and stone industries. Crade, on the other hend, was ratlier slacker. An eggregate steff of 38,163 mas indicated by the 334 concerms fumishing statistics, who employed 38,023 in their last rerort. A gain had also been recorded at the same date of last year, but the level of emplcyment then was lower, the index standing at 97.4 , as compared with 117.1 et Mar. 1, 1940. For tize beginning of March, 1939, 315 employers hed made returns, showing 31,396 persons on their peylists.

Windsor. - The trend was upverd in Windsor, there being a smell edvance in the iron and steel and transportation divisions. Dats vere received from 196 establishments, with 20,633 workers; or 35 more than at Feb. 1. Fmployment was brisker than at the same date of last year, when a decrease had been recorded; the 190 firms whose statistics were received for Mar. ], 1939, had a staff of 19,119.

Winnipef.-Raduced activity was noted in Finnipeg, where 529 concerns reported 41,217 persons in their emioy, as against 41,831 in the preceding month. There was a falling-off in menufacturing, principally in printing and publishing works, and trade was also quieter, while other incustries showed littie general change. Employment vias in lerger volume than at Mar. I of last yecr, when a decline had also been reported by the 511 co-opereting employers, whose personnel had included 38,325 men and women.

Vencouver.- Manufacturing recorcled some improvement in Vancouver, but transportation and trade afforded less employment. On the whole, there was a decrease of 437 persons in the payrolls of the 527 co-operating, establishments, which hed 36,518 employees. A smeller contraction had been indicated at the same date of \& year ago, when 484 firms had reported 34,700 workers; the index was then nearly three points lower than that of 109.0 at the latest date.

Index numbers of employment by cities are given in Tables 2 and 6.

## EATLOYMATM BY INDUSTRIES.

Monfacturing - The trend in this group was egain fovourable, resulting in a higher level of miployment than in eny other month. Cor vhich statistics are available. Tne index, at 122.3, fractionally above the 1939 maximum of 122.2 and 21 so exceeded the figures of 121.7 at Oct. 1, 2937, and 121.6 at Aug. 1, 1929, which were previously the highest indexes. St tistics for Mar. 1, 1940, were furnished by 6,518 manufacturers heving 629,589 operatives, compared with 618,445 at the beginning of Februery. This increase of $11,144 \mathrm{ize}$ s slightly larger than usuel for the time of year, and substantially exceeded the gain reported at Mer. 1, 1939.

The most pronounced improvement took place in textile and iron and steel factories; in the former, some 5,400 and in the latter some 4,000 cdditional employees were reported by the co-operating establishments. Gains were also shown in fur, leather, lumber, tobacco, chemical. and non-ferrous metal products. On the other hand, activity declined in food, clay, glass and stone and electric light and power plants.

The crude index in manufacturing rose from 120.5 at Feb . 1,1940 , to 122.6 at the date uncier reviev; as compared with 107.0 at Mar. I, 1939, and 110.5 e.t Mar. 1, 1938. As already mentioned, the latest advance was very slightly above the average according to the experience of past years, so that the index, after correction for seasonal influences, rose slightly, standing at 125.2, compered with 125.0 at Feb. 1, 1940.

The following are the undadjusted index numbers at Mar.l in the years since 1926:1940 , $122.6 ; 1939,107.0 ; 1938.110 .5,1937,107.6 ; 1936,99.5 ; 1935,92.7$; $1934,86.5$; $1933,75.81952,87,0 ; 1931,97.6 ; 2930,110.9 ; 1929,115.7 ; 1928,104.7$ and $1927,99.8$

A review of the date for Mar. 1, 1939, shows thet returns hed then been received from 6,265 manufacturers, whose staffs had aggregated 546,268 , compered vith 541,129 in the preceding month. From a comperison of the index numbers for Mar. 1 of lest yoar and the present year, it may be estimated that the co-operating factories employed over 80,000 more workers at the latter than at the former date.

Logging.- As is customary in the late winter, there were merked contractions in employ ment in logging ccmps, in many of which the secson's operations were necring completion; 444 firms hed 52,751 persons in their employ, or 14,179 fewer than in their last report. The decline was much larger then theit recorded at Mer. I, i939, and also excooded the everage loss at that date in the years since 1920. The index, at 179.1, was many points above the Mar. 1, 1939, figure of 108.8 , but was lower than at the same date in 1937 or 1938.

Mining. - Stetements were compiled from 417 operators with $\varepsilon$ personnel of 77,858 , as egainst 78,423 at $F_{\mathrm{Bb}}$. 1. Cocl and metcllic ore mines released workers, while quarrying and the extraction of other non-metrlic minerals showed slight improvement. A small increase, on the whole, had been registered in this group at the same date in 1939, but employment was then in smeller volume, the index, et 160.9 , being several points below that of 167.1 at Mar. 1, 1940.

Communications.- A falling-off was indiceted in the commnications division, in which employment wes at a rather higher level than e.t the beginning of March of last yoar. Returns were received from 86 companies and branches heving 21,956 employees at the dete under review, compered with 22,101 in the preceding month.

Transportation.- Fmployment in transportition showed a downord movement at the beginning of March, in conformity with the general trend in the le.te winter of the years since 1920. Irpprovnent was noted in shipping end stevedoring, but there were moderate losses in local transportation end in steam railway operation. The labour forces of the 527 co-operc.ting branches and employers were reduced from 101,120 men and women at Feb. 1, to 100,762 at Mer. 1, 1940, when the index, at 83.0 , we.s slightly higher then at the same dite of 1939; an advance hrd then been noted in the transportation group as a whole.

Construction and Meintenance.- mployment in this industry declined, 67,065 persons being employed at Mer. 1 by the 1,231 contractors and divisionel superintendents making returns, whose Feb. 1 employees aggregated 70,287. Railway construction and maintenance afforded more employment, lergely due to snow-clearing operations, but highway and butlding work were slacker. The construction index, standing at 55.4 at the latest date,was many points lower than et the beginning of March in 1939, when an increase had been indicated by the co-operating employers.

Services.- A moderate gain was noted in the service group, in which 594 establishments reported a combined staff of 29,324 , compered with 29,144 in the preceding month. A loss had been recorded at $\mathrm{Kar}_{\mathrm{ar}} .1,1939$, and the index wes then rather lower.

Trade.- Retail trade showed reduced activity, while employment in wholesale establishments was brisker. On the whole, there vas a decrecse of 1,415 in the personnel of the 2,082 firms furnishing data, who hed 130,138 workers, compered with 131,553 at Feb. 1. A rather larger contraction hed been noted at the same date of last year, when the indax stood at 128.9 , as compared with 134.9 at the latest date.

Tables 3 and 4 give index numbers by industries, while Chart 4 shows the course of employment since 1935 in several of the leding incustrial groups, the curves being plotted from the figures given in Table 3.

## ENPLOYMENT IN GREAT BRITAIN.

According to The Ministry of Labour Gezette, employment at Jan. Is was seriously affected by the severe weather, which in many cases made outdoor work impossible, and resulted in temporary unemployment for a lerge number of persons; there was an increase of 157,371 in the number of persons on the registers of the Imployment Exchanges at Jan. 15 as compared with $\mathrm{D}_{\mathrm{e}}$. 11 . Hovever, the number unemployed was smaller by 520,130 than at Jan. 16, 1939. Among workers enged 16 to 64 , insured under the general scheme of unemployment insurence, the percentage unemployed in Great Britain end Northern Ireland, was 10.2 et Jen. 15, 1940, es compored with 9.1 at Dec. 11, 1959, and 14.0 et Jen. 16, 1939. Among insured persons of all classes, the percentage idle was elso 10.2, compered with 9.1 et $\mathrm{D}_{\text {ec }}$. 11, 1939. Recent press despatches state that the number of registered unemployed at Feb. 12 decreased by 15,000 as compared with Jen. 15, leaving 1,500,000 recorded as unemployed; however, improvement in the situation in the latter half of February brought ebout an estimated reduction of some 200,000 in the number unemployed.

According to a report issued by the United Statas Department of Labor, seasonal factors contributed largely to the decline of approximately $1,160,000$ workers in non-agricultural employment in January; this loss was about 100,000 greater than that reported last year. However, approximetely $1,100,000$ more workers were engaged in non-agricultural occupations in Januery, 1940, that in January, 1939. Substantial seasonel declines were reported from December to Jenuery in retail trade, manufacturing, construction and transportation. Total factory employment declined by $2.4 \mathrm{p} . \mathrm{c}$. from the mid-December level, affecting 200,000 workers. This decrease, which was the first recesbion since May of last yoar, was slightly lerger then the expected seasonal decrease of $1.8 \mathrm{p} . \mathrm{c}$. Employment in factories making durable goods, which had increased their activity most rapidly during the previous months, declined somewhat more than employment in the non-dureble goods industries, in which the textile, food, paper and tobecco groups showed appreciable employment declines. The current employment index ( 101.6 on the base $1923-25=100$ ) was 10.2 p.c. higher than the figure a year ago, and the payroll index (98.1) was 17.2 p.c. higher. The index in the durable goods division was 97.5 , or 18.5 p.c. higher then in January, 1939, while that of 105.4 in the non-durable goods was 3.6 p.c. higher.

New York.- According to the New York State Department of Labor, employment in factories in New York State increased by 0.8 p.c. in Februery as compared with January; this gain was below average in the experience of past years. However, the index of employment in manufacturing, based on 1925-27 as 100, was 90.4 in February, or over 10 p.c. higher than in February, 1939, and was also higher than in that month in any other yerr since 1930.

Massachusetts.- Reports from 1,801 representative manufacturing establishments tabulated by the Massachusetts Department of Labor and Industries showed a seasonel decrease of 1.3 p.c. in employment in Januory, 1940 , es compared with December, 1939; their steffs aggregt.ted 286,502. The number of mage-earners employed in Massachussets factories in January, 1940, was 7.5 p.c. greater then in Jenuery, 1939.

Illinois.- The Illinois Department of Labor received retums from 6,597 manufacturing and non-manufacturing establishments, which showed a decrease of 0.1 p.c. In the employment they afforded in February, 1940, as compored with January.

Relative Feight of Enfoyment. By Industries as at Mar. 1, 1940.
$\begin{array}{lllllllll}100.0 & 56.7 & 4.8 & 7.0 & 2.0 & 9.1 & 6.0 & 2.7 & 11.7\end{array}$

Note:- The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Industries

## MANUFACTURING

Animal products - edible
Fur and products
Leather and products
Boots and shoes
Lumber and products
Hough and dressed lumber Pumiture
Other lumber products
Musical instruments
Plant products - edible
Pulp and paper products
Pulp and paper
Paper products
Printing and publishing
Rubber products
Textile products
Thread, yarn and cloth Cotton yarn and cloth Woollen yarn and cloth Artificial silk and silk goods Hosiery and kndt goods
Garments and personal furnishings
Other textile products
Tobacco
Beverages
Chemicels and allied products
Clay, glass and stone products
Electric light and power
Blectrical apparatus
Iron and steel products
Crude, rolled and forged products
Machinery (other than vehicles)
Agricultural implements
Land vehicles
Automobiles and parts
Steel shipbuilding and repairing
Heating appliances
Iron and steel fabrication (n.e.s.)
Foundry and machine shop products
Other iron and steel products
Non-ferrous metal products
Non-metallic mineral products
Miscellaneous
LOGGING
MINING
Coal
Metallic ores
Non-metallic minerals(except coal)
COMMUNICATIONS
Telegraphs
Telephones
TRANSPORTATION
Street railways and cartage
Steam railways
Shipping and stevedoring
CONSTRUCTION AND MAINTENANCE
Building
Highway
Railway
SERVICES
Hotels and restaurants
Personal (chiefly laundries)
TRADE
Retail
Wholesale
