## DEPARTMENT OF TRADE AND COIMERCE <br> DURINION BUREAU OF STATISTICS <br> GENERAL STATISTICS BRANCH OTTAÏA - CANADA.

THE JANUARY EMPLOYMENT SITUATION.

Dominion Sjatistician:<br>In Charge Employment Statistics:<br>R. H. Coats, LL.D., F.R.S.C., F.S.S. (Hon.)<br>M. E.K. Roughsedge.

## General Summary.

Employment at the first of Januury in the years since 1920 has invariably shown curtailment, resulting from the completion or suspension of outdoor work in construction and other highly seasonal industries, together with the losses occasicned by establishments closing over the holidays and for inventories and repairs; the decreases from the preceding month have ranged from just under four p.c. to $13 \frac{2}{2} \mathrm{p} . \mathrm{cos}_{\mathrm{s}}$ in the twenty years, averaging $6.8 \mathrm{p} . \mathrm{c}$, in this period.

The Dominion Burceu of Statistics received information for Jan. 1, 1941, from 12,467 employers whose staffs aggregated $1,316,774$, a reduction of 47,827 from the preceding month. This was a decline of $3.5 \mathrm{p}, \mathrm{c}$., which is the smallest percentage contraction at the opening of any year in the period of observation.

Based on the 1926 average as 100 , the crude index stood at 134.2 , as conpared with 139.1 at the beginning of December. The letest figure is 15 . $\mathrm{p} . \mathrm{c}$. above the Jan. 1., 1940, index of 116.2 , the previous high figure for that date. Since the shrinkage at the beginning of January, 1941, was considerably below normal, the seasonally corrected index showed an increase, rising from 135,8 at Dec. 1, J940, to 139.4 at the date under review. The latter figure is the highest seasonallyadjusted index on record.

While there were declines in employment in many industries and areas at Jan. 1, 1941, these were not so widespread as has been custonary in other winters. The distribution of the losses mong the various industries also differed from thet usually indicated. Thus, on the average, the number laid off by factories at the beginnine of Januery in the period, 1921-1940, has constituted just under 55 p.c. of the total reduction reported by the firms furnishing returns, and thet in construction, some $30 \mathrm{p} c_{0}$, the remaining $15 \mathrm{p}, \mathrm{c}_{0}$ being in transportation, mining, etc. At the date under review, however, the number of persons released from work in menufacturing was only about $24 \mathrm{p}, \mathrm{c}$., while that in construction approximated $58 \mathrm{p} . \mathrm{c}$. of the total number leid off. The increase in the proyortion shown by the latter industry was not so much due to an unusually large falling off in construction, as to the fact that the declines in certain other industries, particularly manufacturing, were below normel. On the other hand, logging reported a reduction that exceeded the average.

The heavy curve is based upon the number of persons employed at the first day of the month by the firms reporting, compared with the average employment they afforded in the calendar year 1926 as 100 . The broken curve shows this crude curve corrected for seasonal variation as determined by the experience of the years 1929-1937.

The curtailment of operations in manufacturing involved a smaller number of workers than in any other Januery on record; approximately 11,600 men and momen were released from employment in these industries, a decrease of 1.6 p.c. from the preceding month. This compared favourably with the average shrinkige of over seven p.c. at Jan. 1 in the years since 1920. The crude index declined from its all-time high of 144.7 at Dec. 1,1940 , to 142.5 at the dute under review. It was then higher than in any other month in the period of observation, except in the final quarter of last year. The seasonally-corrected index at Jan。1, 1941, stood at 152.0, rising from 146.4 in the preceding month. These tro adjusted figures are the highest on record.

There vere considerable gains at the date under review in iron and steel and tobacco factories; electrical apparatus, non-ferrous metal and chemical works were also busier. The general trend in the remaining manufacturing industries was domwurd. The most pronounced reductions were in the food, lumber, textile and pulp and paper divisions.

A fuller analysis of the situation in the various industries appears beginning on page 9 .

Following are the unadusted, general indexes of emplojment at Jan. 1 in the years since 1927, based on the 1926 average as 100:-1941, 134.2; 1940, 116.2; 1939, $108.1 ; 1938,113.4 ; 1937,103.8 ; 1936,99.1 ; 1935,94.4 ; 1934,88.6 ; 1933,78.5$; 1932, $91.6 ; 1931,101.7$; 1930, 111.2; 1929, 109.1 and 1928, 100.7.

For Jan. 1, 1940, 11,891 employers furnished returns showing that they hed an aggregate staff of $1,135,400$ men and women; as compared with $1,198,541$ in the pre ceding month, this was e reduction of 63,141 , or 5.3 p.c. The lergest losses had then taker place in the non manufacturing industries.

## ETPLOYMENT IN BANKING AND INYESTMENT OPERAITUNS.

For some months, statistics of employment have been collected from banks, trust compenies and stock market operators. At the beginning of Januery, 401 firms and branches in these lines of business reported 33,413 employees, compared with 33,469 in the preceding month. The addition of these figures to the returns furnished in the manufacturing, logging, mining, transportation, communications, construction, serviced and trade industries brings the total number oi persons included in the Jan. 1 survey of employment, to $1,350,187$ in 12,868 establishments, and slightly lowers the index of $1 \$ 4.2$ in the industries above enumerated, to 133.5; when the employers of the co-operating finenciEl organizations were added to the generil figures for Dec. 1, 1940, the index was lowered from 139.1 to 138.2. At Jan. 1, 1910, the generul index had been 116s2, while that including the financial organizations was 116.1.

## HIPLOMAENT BY ECONOMIC AREAS.

Seasonally reduced uctivity was reported in ell provinces except Prince Edinard Island and Manitoba, wher the movement wis upward; the losses ranged from 1.1 f.c. in Onturio and 1.2 p.c. in New Brunswick, to 6.7 p.c. in quebec and 7.8 p.c. in Sask\&tchewan. limploymont in the five economic areas was brisker than at the beginning of January of last winter, and in four of thestems also in greater volume than at Jan. I of any other year for mhich statistics ive available. The

exception was the Prairie Provinces, where the index was slightly lower than at Jan. 1, 1929, the maximum for that date; the latest figure was otherwise the highest on record for January.

Maritime Provinces.- Most of the contraction in employment in the Maritime Provinces at Jan. I, 1941, was in construction, but manufacturing,logging, mining and trade were also slacker. Within the manufacturing division, there were considertble gains in iron and steel plants. Heightened activity was also indicated in transportation, as a result of the re-opening of the winter ports. There were losses in employment in Nova scotic and New Erunswick, while improvement was show in Prince Eidwara Island.

Statements were received from 883 establishments in the Maritime aren, employing 96,811 persons, compared with 99,231 at the beginning of December. The general recession at Jan. 1, 1941, approximated the average recorded at that date in the period, 1921-1940, although it was rather smaller than the decrease in employment noted at the beginning of January of last year. The index then, however, was some eleven points lower than at the latest date, when it was higher than in any other Janusiry of the record.

A total of 830 employers hack furnished data for Jan. 1, 1940, showing payrolls ageregating 88,031 workers, compared with 91,099 in the preceding month.

Quebec.- The curtailment in Quebec at the beginning of January was slightly above normal in the experience of the years since 1920, although it was not equal to that indiciated at Jan. 1, 1940. The index, at 139.6 at the latest date, was practically nineteen points higher than at the opening of 1940 , being also higher than in any other January for which statistics are availiable.

Manufacturing (notably in textile, lumber, leather, pulp and paper and vegetable food plants), logging, transportation and construction reported the most pronounced losses, while the tendency was also downard in mining. On the other hand, seasonal improvenent took place in hotels and restaurants and retail trade, and within the manufacturing division, in tobacco, chemical and electrical apparatus factories. In many cases, operations will have been resumed early in the New Year in the establishments closed over the holiday season and for purposes of inventory. The labour forces of the 3,120 co-operating firms aggregated 400,193 workers, as against 423,146 at Iec. 1, 1940 .

For Jan. 1, 1940, 2,957 establishments had reported a staff of 345,228 men and women, compared with 372,544 in the preceding month; the index then stood at 120.7.

Ontario.- Manufacturing in Ontario showed seasonal declines, widely distributed among many of the branches of this industry. The greatest reductions were in lumber, textile, food and pulp and paper, while smaller losses took place in rubber, clay, glass and stone, beverage, leather, chemical and other factories. On the other hand, tobicco and iron and steel plants were decidedly busier and nonferrous metals also afforded more employment. In the non-menufacturing industrios, there were contractions in mining, transportation and construction. Logging and retail trade, however, showed further improvement.

A combined staff of 564,158 was employed by the 5,382 businesses from which returns were received, whose employees had numbered 570,481 a.t Dec. 1. This decrease of 6,323 persons, or $1.1 \mathrm{p} . \mathrm{C}$. , was the smallest recorded at Jan. I In any year sinco

EMPLOYMENT BY ECONOMIC AREAS

1920，the percentage loss being less than half that noted at the same date of last winter；the average loss at Jan． 1 in the period，1921－40，was over six poc．

The index，ut 141．I at the latest date，was many points above that of 120.9 at the beginning of January in 1940 ，being at its maximum for Janukry in the period of observation．The firms furnishing data for Jan．1，1940，had numbered 5,200 ，and their employees， 481,260 ，as compared with 495,743 in the preceding month．

Prairie Provinces ．－．Shrinkage on a smaller scale than at the opening of 1940 was noted in the Prairie Provinces at Jan。1，1941，when statistics were tabulated from 1,777 employers of 152,570 workers，or 3,438 fewer than it Lec， 1 ．This shrink． age was decidedly below normal in the experience of the last twenty years．The index at the date under review stood at 116．2，as compared with 103.3 at Jan．1， 1940.

There were reductions in Saskatchewan ind Alberta at the latest date，but improvement was reported in Manitoba．

Manufacturing，mining，transportation and construction showed reductions at the beginning of January，1941，the largest of these being in construction．In the manufacturing division，the greatest declines were in vegetable foods and textiles， while iron and steel plants were busier Employment also increased in logging and retail trade．

For Jan．1，1940，1，698 establishments had reported 134,934 employees，a loss of 7,321 as compared with the preceaing month．

British Columbia．．The recession in British Columbia involved many fewer workers than that indicated at the beginning of Januxy of last year，and was smeller than the average loss at Jan． 1 in the period，1921－1940．The 1， 303 employ－ ers furnishing information reported 103，042 persons on their staffs at the date under review，as against 109，734 at Dec．1，1940．Lumber and food factories，logging， mining，construction，transportation and trade recorded curtailment，that in logging being most extensive．Employment generally was in much greater volume than at Jan．l， 1940，when the 1，206 co－operating firms and branches had employed 85,947 men and women；the index then stood at 9 ？, 6 ，compared with 116.0 a．t the opening of 1941．The previous high figure for Janucry was that of 100.4 in 1929.

Index numbers of employment by economic areas are given in Tables 1 and 5， while Chart 3 shows the cuurse of employment in these areas since 1935.

## EMPLOYMENT BY CITIES．

There were contractions in four of the eight cities for which separate tab－ ulations are made，firms in Montreal，Quebec City，Hamilton and Vancouver reporting reduced employment，while there were increases in Toronto，Ottawa，Windsor and Winnipeg。 Employment in these centres was brisker than at Jan。1 in 1940，or any other year of the record．

Montreal－The recession in Hontreal involved a rather smaller number of workers than at Jan． 1 in any earlier year for which information has been compiled， with the exception of 1935．Statements were received from 1,809 establishments with 191,216 employees，as compared with 197，640 at Dec．1，1940．Curtailment was shown in manufacturing as a whole，the largest losses being in food，textile and lauther plants；on the other hand，iron and steel，electrical apparatus and rubber factories were busier．Among the non－manufacturing industries，transportation and construction
were slacker, while amployment in retail trade was seasonally active. The index, at 122.8 , was considerably higher than at the beginning of January in 1940, when 1,725 firms had reported payrolls aggregating 167,684 persons, compared with 175,114 in the preceding month.

Quebec- Services and trade showed moderate gains, but manufacturing and construction released employees. The 218 co-operating employers in Quebec City reduced their steffs from 20,753 at Dec. 1 , to 20,094 at the beginning of January, This percentage decline was below the average in the experience of preceding years for which data are available. A smaller loss had been indicated at the same date in 1940; employment then, however, was at a lower level., according to the 210 establishments making returns, which had employed 14,999 men and women.

Toronto $=$ Toronto firms showed a contra-seasonal increase in personnel at Jan. 1, 1941; this was the first time in the record that the trend has been up.ward at the opening of the year. The latest index, at 137.1 , was decidedly higher than at Jan. 1, 1940, when it stood at l16.6, being also higher than in any other month for which statistics are available. As compared with Dec. 1, 1940, there were losses in manufacturing at the date under review, the most noteworthy being in the textile, food and printing and publishing groups, while iron and steel works afforded more employment. Construction und transportation were rather quieter, but there was pronounced seasonal improvement in retail stores. Returns were tabulated from 1,847 employers of 178,365 workers at Jan. 1 , compered with 177,407 in the preceding month; at the beginnirg of January of last year, 1,768 firms had reported 150,019 persons on their payrolls.

Ottawa- In Ottawa, manufacturing and trade were brisker, while building showed a decline. The result was a small increase in general employment in the city, according to the 241 reporting establishments, whose staffs included 17,838 men and women, as compered with 17,655 in the preceding month. A slight gain had been recorded at the same date of last yeax, when the index of employment was some 21 points lower. Statements had then been furnished by 228 employers with a personnel of 149838 。

Hamilton.- Data were received from 335 firms in Hamilton employing 44,762 workers, as against 45,068 in the preceding month. Manufacturing showed little general change, while transportation and construction were dull. The general decline was decidedly below normal for Jen. l in the experience of other winters for which information is available. The 332 establishments co-operating at the same date last year had reported 37,248 employees, compared with 37,826 at Dec. 1, 1940; the index was nearly 23 points lower than the latest figure of 137.1 , which is the highest ever recorded at the opening of the year.

Windsor. - There was a further gain in employment in Windsor at the boginning of January. The increase was mainly in manufacturing, notably in the iron and steel industries; trade was also rather brisker. Construction, however, released some workers, while little general change was shown in other divisions. Returns were compiled from 196 firms with 26,800 persons in their employ, as compared with 26,136 in the preceding month. Activity was at its maximum for the period of observation, bein considerably greater than at Jan. 1, 1940. The trend then had also been upwerd, according to information from 194 business men, whose payrolls had included 20,693 men and women.

Winnipego- Employment in manufacturing and services declined moderately in Winnipeg; transportation, building and trade, however, reparted improvement, that in the last-named being particularly marked. In manufacturing, the largest loss
was in vegetable food factories, while iron and steel works added to their forces.
The 545 co operating establishments reported 51,45$]$ employees, compared with 48,262 in the preceding month. This increase, which was contra seasonal, resulted in a higher level of employment than at Jan, I in any preceding winter for which in formation is available for this city. The index, at 117.5 , was many points above that for Jan. 1, 1940, when data had been tabulated from 550 employers of 42,685 persons.

Vancouver.- Reduced activity was indicated in Vancouver, according to returns from 576 firms employing a staff of 43,858 , as compared with 44,159 at Dec. 1 . The decrease noted at the same date of last year had been larger, and the index then was nearly 1.8 points lower than that of 128,8 at the beginning of January. There were losses in manufanturing, notably in the lumber and non ferrous metal divisions, while iron and steel works added to their forces. building was also brisker than in the precoding month, but trade showed a falling off. For Jan. 1, 1940, 521 establishments hed reported 37,173 men and women on their paylists, compared with $38_{9} 081$ in the preceding month.

Index Numbers by Cities are given in Tables 2 and 6.

## DMPLOYMENT EY INDUSTRTES:

Manufacturing.- As already stated, the deoline in employment in manufacturing at Jan. 1, 1941, was the smallest reported at that date in any of the years since 1920, there being a loss of 1.6 poc., as compared with Dec. 1 , while the average reduction in this comparison since 1920 has been over seven p,c. The shrinkage at the date under review, as in January of other winters, was partly due to comparatively brief shutdown for inventory and over the holiday season. In each of the preceding years for which data are now available, employment has shown partial recovery in the weeks succoeding Jan, 1 . On the average, this has amounted, up to the date of the next, report. (Feb.1), to about $50 \mathrm{p}, \mathrm{c}$. of the decrease indicated at the opening of the year.

The manufacturers making returns for Jan。1, 1941, numbered 6,814, and their staffs aggregated 733,367, compared with 744,981 at Dec, J. The index fell from 144.7 in the preceding month, to 142.5 at the date under review. As compared with 118 . 2 at Jan。1, 1940, the previous maximum for that date, there was an increase of 20.6 p.c.

The seasonally-corrected index rose from 146.4 at $\mathrm{Der}_{\mathrm{e}} \mathrm{I}, 1940$, to 1.52 .0 at Jan, l. The latter was the highast figure recorded in any month for which statistics are vailable.

The most extensive reductions at the date under review were in vegetable food, textile and lumber factories, which released 4,137, 4,037 and 3,969 employees, respectively. Large losses also took place in pulp and paper, leather, clay, glass and stone and animal food plants, while there were smaller reductions in musical instrument, rubber, beverage and fur factories and in central electric stations. On the other hand, tobacco, iron and steel, non ferrous metal, electrical apparatus and chemical works afforded more employment, the gains in fron and steel and tobacco being substantial. In most branches of manufacturing, activity at Tan. 1, 1941, was at an excoptionally high level for the time of year. The expansion in iron and steel, (the twelfth successive increase in as many months), resulted in the greatest volume of

emsloyment yet recorded；over 210,700 men and women were employed in these in－ dustries at Jan． 1 ，being $16 \mathrm{p} . \mathrm{c}$ ．of the total number on the staffs of the co－ operating employers in all industries at the date under review．

The index numbers of factory employment at the first of January in the years since 1927 are as follows i－1941，142．5；1940，118．2；1939， 104.3 ；1938，108．6； $1937,102.4 ; 1936,96.8 ; 1935,87.4$ ；1934， 80.0 ；1933， $74.4 ; 1932,83.9$ ；1931， 93.7 ； 1930，106．5；1929，107．3 and 1928，97．9．

The 6,468 manufacturers making returns for the same date in 1940 had report ed a personnel of 606,636 ，a decline of 20,616 workers，or 3.3 p．c．from the preced ing month．

Logging－Bush operations，on the whole，showed a considerable decrease at Jan．1．The experience of the years since 1920 shows that there is customarily an exodus from logging camps over the holiday season，but the general movement this year was more pronounced than usual．Employment was in greater volume than in Jan－ uary of 1940，or 1939，but was quieter than at that date in 1938．The index stood at 276.1 ，compared with 303.6 in the preceding month，and 237.8 at Jan．1，1940．A combined working force of 81,870 was reported by the 466 operating camps，which employed 90,016 men in the preceding month．Improvement was shown in Nova Scotia， Ontario and the Prairie Provinces，while elsewhere reductions in staff were in dicated，of which those in Quebe were largest．

Mining There was a seasonal contraction in mining operations at the beginning of Januery，there being losses in the extraction of metallic ores and of noal and other non－metallic minerals．Ketums were received from 418 operators heving 78,901 employees，compared with 81,262 at Vec .1. A much larger decrease had been indicated in mining as a whole at Jan．1，1940，and employment was then in less volume；the index，at 167,6 at the latest date，was slightly higher than at Jan． 1 of any other year of the record．

Communications－A slight，contra－seasonal increase in personnel was report． ed in telephonic and telegraphic comunications，in which activity was at a rather higher level than the beginning of January a year ago，or any other year since 1952. The payrolls of the companies furnishing data rose from 24,037 in the preceding month， to 24，099 ut Jan．1，1941。

Transportation．The curtailment indicated in transportation was on a small－ er scale than that noted at the same date in 1940，being alsc less than－average for the beginning of Jenuary in the experience of the years since 1920．The index，at〔d？was higher then at Jan。l of 1940，or of any other year since 1931．There were reductions at the date under reviev in street railway transportation，cartage and storage and in shipping and stevedoring，those in the latter group being pro－ nounced．On the other hand，steam railway operation showed considerable improvement， Information was received from 53 ？emplojers，who reported 10824 ？workers，as compared with 112.821 in the preceding month．

Construction and Maintenance，－As already mentioned，the loss in personnel in construction at the date under review exceeded the average for Jen． 1 in the exper－ ience of the last twenty years，although it was decidedly smaller，than noted at Jan．l， 1940．The index of employment in construction，at 83.0 ，was many points higher than at the same date of last winter，while that in building was the highest for January in any year of the record except 1930.

Statements for Jan. 1, 1941, were tabulated from 1, 403 contractors and divisional superintendents, whose staffs aggregated 1.01,028, a dearease of 21.6 p.c. as compared with their December figure of 128,861 . Highway construction showed very considerable curtailment fron the preceding month, and there were also large contractions in building, while smaller losses were reported in railway construction and maintenance。

Services.- There was an advance on the whole in the service group at Jan.l, due to improvement in the business of hotels and restaurants; laundries and dry cleaning establishments, however, were seasonally slackex. The co operating firmb in this division, numbering 605, reported 33,062 employees, as compared with 32,691 in the preceding month. A moderate gain had also been noted at the beginning of January, 1940, but the index was then lower than at the date under review, when it stond at 149.5 . This figure was the highest in the record for the beginning of January。

Trade... Trade afforded considerably more employment, the gains, on the whaie, being greatly above the average at Jan. 1 in the years since 1920. There were seasm al losses in wholesale establishments, but large additions to staffs were reported in retail stores. The $2,7.38$ enployers furnishing retums had 256,200 persons on their staffs, compared with 149,932 at $\mathrm{Dec}_{\mathrm{e}}$. Io The Jan. 1 inder stood at 160.8 , as com. pared with 154.4 in the preseding month, and 149.9 at the same date in 1940. Emplay. ment in trade at the opening of the present year was in greater volume than in any other month in the period of observation.

Tables 3 and 4 give index numbers of employment in some 60 iadustries.

## EMPIOMAENT TA GREAT BRITAFAF

The number of wholly unemployed persons on the registars of the Labour Exohanges at Nov. 11, 1940, was 603,000, a decrease of five p,c. from the preceding month; the number temporarily stopped was 163,000 , while the registers also listed the names of 24,575 persons, nomally in casual employmant, who were unemployed at the middle of November. Recent press dispatches state that the total unemployed persons at Dec. 9, 1940, was 705,279; this was a decrease of about 86,000 froin the November figure.

## EMPLOYMENT IN THE UNITED SIATES.

(These reports are based upon the latest official reports received.)
The Department of Labor, Washington, recently amounced that approximately 540,000 workers were added in non-agricultural employment in December, this being the largest December increase in the last eleven years. The total non agricultural employment, which is now inge than $37,100,000$, is a new high for recent years, and is nearly $1,500,000$ greater than in lhecember of last year.

The major factor in the huge December increase in employment was the greaterthan seasonal gain of 430,000 morkers in whelesale and retail trade. Manufacturing continued to expand under the spur of defence expensitures, adding nearly 120,000 workers in December.

This gain raised the levei of factory employment to a position above that of any other month in the last 21 years. Fastary employment usually declines from November to December, gains having been shown in only seven earlier Decembers. The
current increase has been surpassed in December in only two other years, 1919 and 1924.

In the finance, service and miscellaneous groups, there was a slight increase, approximately 11,000 workers. Transportation and public utility companies showed a seasonal decrease of approximately 35,000 workers, and 2,000 fewer workers were employed in mining。 Construction showed a much smaller-than-seasonal decrease in December, the decline of only 27,000 persons reflecting well-sustalned levels in both private and public construction.

The major portion of the gain of more than 1,500,000 in non agricultural employment over the year interval was in the manufacturing and construction industries. While the increase of more than 640,000 workers in manufacturing was larger than that of approximately 450,000 in construction, the latter increase represents a percentage gain of approximately $40 \mathrm{p} . \mathrm{c}$. compared with a seven p.c. increase in total factory employment.

The only major group to report a decrease over the year was mining ( 15,000 ); decreases in the coal-mining and crude petroleum producing industries offset gains in quarries and metal mines.

The contra-seasonal gain of 1.4 p.c. in factory employment between November and December, 1940, was coupled with an increase in weekly payrolls of $5.4 \mathrm{p} . \mathrm{c}$. , or nearly $\$ 12,000,000$. The December, 1940, employment index for all manufacturing stoot at 116.2 p.c. of the 1923-25 average, a gain of $7.8 \mathrm{p} . \mathrm{c}$. since December,1939, which placed it at the highest point since the series began in January, 1919. The corresponding payroll index was 122.8, an increase of $16.5 \mathrm{p} \cdot \mathrm{c}$, over last year at this time, and the highest since June, 1920. The twelve-month average of employment in 1940 was 107.5 , compared with 99.9 in 1939.

For the durable goods group of industries, the index of employment in Decenber, 1940 , was 117.5 , an increase of $14.3 \mathrm{p} . \mathrm{c}$. over last year; that in the non-durable goods group was 114.9 , the gain over a year ago being two p.c.

New York. Factory employment in New York States advanced by 1.4 p.c. from the middle of November to the middle of December, aecording to data received by the Bureau of Statistics and Information from 2,292 firms employing a total of 486,666 persons. The index of employment, at $102.5 \mathrm{p}, \mathrm{c}$. of the average for the years, 1925 - 27 , was 11.. 8 p.c. higher than in December, 1939, while that for payrolls was 19.1 p.c. higher. There were large increases in December, 1940, in the metals group, and improvement was also shown in many other lines.

Massechusetts.- Returns tabulated by the Massachusetts Department of Labor and Industries from 1,739 manufacturing establishments show that they employed 239,014 persons in December, an increase of 2.7 poce as compared with the middle of November. As compared with December, 19"39, there was an increase of seven p.c. in employment.

Illinois... There was a contra-seasonal increase of $3.7 \mathrm{p} . \mathrm{c}$. in the employment ufforded by 6,442 establishments in Illinois from Nov, 15 to Dec. 15, 1940, according to the Illinois Department of Labor. Improvement was reported in both manufacturing and non-munufacturing industries. As compared with December, 1939, there was an increase of $7.6 \mathrm{p} . \mathrm{c}$. in employment, while payrolls were h1/6er by 12.6 p.c.
