GeNERAL SUMMARY

## EMPLOYMENT.

#### Abstract

There was a further expansion in industrial activity at the beginning of November, when the tenth successive increase in employment was reported by the firms furnishing monthly return e to the Dominion Bureau of Statistics. Although the gain was considerable, it was the smallest indicated in the period since March. l. The latest increase in employment was accompanied by the largest advance in the payrolls reported to the Bureau since the record of current earnings was commenced in March, 1941.

Employment at Nov. 1 in the period since 1920 has shown an increase in aline and a decline in eleven yours, the average change being a slight reduction. The advance at the date under review is, therefore, contrameasonal. It was, however, smaller than the gain reported at Nov. I in either 1939 or 1940 ; in those years, the advance at the beginning of November marked the close of a period of uninterrupted expansion extending in each case over seven months, rather than over ton months, as in 1941.

Statistics were received by the Bureau from 12,775 establishments whose staff e at Nov. 1, 1941, aggregated 1,676,193; this was an increase of 17,945 persons, or 1.1 pec., over their working forces at Oct. l. The crude index of employment, (based on the 1926 average as
(100) rose from 165.8 in the preceding month, to 167.6 at the beginning of November. This figure was over 20 pec. above the Nov. 1,1940 , order of 139.2 , heretofore the highest for that dante.

As already stated, the average change at Nov. I in preceding years has been a decline. The seasonally-corrected index at Nov. l, 1941, therefore advanced, rising from $15 \% .7$ at Oct. 1 , to 160.4 at the date under review. These two adjusted figures, like the corresponding crude index numbers, were the highest so far indicated in any month of the record.

With only one exception in the last twenty years, employment on the whole has shown curtailment between Nov. ? and Dec. 1. The average loss at the latter date has approximated two pec. If the next bulletin on employment shows a decline, it will be the first time solace the beginning of January, 1941, that the general trend in tho Dominion has been downward.

Manufacturing showed further important improvement, some $1 \hat{2}, 750$ persons having been added to the forces of the co-operating factories between Oct. 1 and Nov. 1 . The gains in the durable goodsl/division were exceedingly large, particularly those in iron and steel. Pronounced seasonal curtailment in vegetable food factories resulted in a loss in the nondurable goods group as a whole. The general advance in manufacturing brought the index to a new high at Nov. 1 , when it stood at $187.6 \mathrm{p} . \mathrm{c}$. of the 1926 average; the Oct. 1 , 1941 , figure had been 185.0 , and that at Nov. 1. 1940 , Was 144.6 , previously the maximum for November in this record.

Among the non-manufacturing divisions, logging, mining, building and retail trade afforded greater employment. While the gain in logging at Nov. 1,1941 , was important, it was not equal to that recorded at the beginning of November in any of the last few years; this was

[^0]Chort/

probably due to a shortage of labour in some sections of the country. Seasonal contractions wore shown at the date under reriew in commancations, transportation, highway and railway construction and maintenance and services.

A fuller analysis of the situation in the various industries as at Nov, 1,1941 , foll:wa the text dealing with condition in the economic areas and the leading cities.

Tor Wov. $1,1940,12,392$ emplojers had reported staffe aggregating $1,364,720$, an iLursabl oz some 28,500 persons, or 2.1 p.c., as compared with their Oct. 1 returns. Manufacturing had then shown considerable gains, and improvement had also been noted in the non-manufacturing classeb with the exception of steam railway operation and construction work.

In recent years of the record, the unadjusted indexes at Nov. 1 have been as follows (1926=100): $-1941,167.6 ; 1940,139.2 ; 1939,123.6 ; 1938,114.6$ and 1937, 125.2. In 1929, when industrial employment on the whole was at a higher level than in any other pre-war year, the Fov. 1 figure had been 124.6.

## THE COURSE OF EMPIOYMENT IN THE PERIOD OF THE WAR.

In the first twenty-six months of the war, employment generally in the Dominion has shown an unprecedented rise, the all-industries index increasing from 119.6 at Sept. 1, 1939, to 167.6 at the latest date, or by forty p.c. This gain appeari particularly impreseive when compared with the growth of employment in previous years. Thus from 1931 to 1940 , the general index rose by some 21 p.c., while the increase from 1921 to 1940 approximated 40 p.c.

It is estimated that the firms comoperating in the Bureau's current survey's of employment have adced some 430,200 percons to their working forces since the outbreak of hostilities. The additional personncl required by the smaller establishments must also have been considerable, while the extension of working hours, together with more effective use of plant and equipment under the spur of necessity, have no doubt greatly increased the general productive capscity of workers in the Dominion.

The enlistment of large numbers of men of working ages in the various branches of the armed borvices and the ancillaxy forces since the outbreak of war makes the record even more impressive, and tends furthar to emmasize the changes in the industrial, the sex and the age dietribution of wage-earners by which the growth of employment has been accompanied. No informetinn is avallable at present respecting the sex and the age distributione, and that regarding the industrial dietribution is incomplote.

Under present circumstances, the figures for the manufacturing industries are provall. mere significant than those for Industry as a whole. Between Sept. 1. 1939, and Fiov. 1. 1941, the number employed by the co-operating manufacturers increased bj approximately 376,000. The index of employment in factories rose in this period uy almost 63 p.c., a proportion greatly exceeding that of $24 \mathrm{p} . \mathrm{c}$. Indicated from 1921 to 1930 , and that of about 39 p.c. in the decade from 1931 to 1940.

In the first twenty-six months of war, the index in the durabie goods industries has advanced from 100.4 to $20 \% .6$ at Nov. 1 , or by nearly $107 \mathrm{p}, \mathrm{c}$. Smaller, but elso important has been the increase of 36 p.c. In those engaged in the production of non-durable gonds. At Sept. 1, 1939, some 40 p.c. of the workers reported in manufacturing were omployed in the heavy industries, a proportion which had risen to over 50 p.c. at No7. 1, 1941.

With the excoption of construction, all branches of the non-manufacturing division have shown incrases. These have been as follows:-mining, 10.1 p.c.i commulcations, 14.5 p.c.; tranoportat10n, 14.2 p.c.i services, 14.5 p.c.i trade 21.1 p.c. and logging, 264.2 p.c. The large gain in legging is to a conciderabls extent seasonal in character. The seasonal factor is also largely responsible for the decline of three p.c. In construction in the period from Sept. 1, 1939 to Nov. 1, 1941; this took place wholly in highway and railway work, building showing a gain of 108 p.c. in the twenty-six months.

The expansion in employment since the outbreak of war has extendsd in greater or less

degree to all parte of the country. The gaing vary from that of $19.4 p, c, 1 n$ the Prairie Provinces and 28.1 p.c. in British Columbia, to $49.1 \mathrm{p} . \mathrm{c}$. in Ontario, and $54.3 \mathrm{p} . \mathrm{c}$. in the Maritime Provinces.

Firms in the eight leading citie whose tatistics are regularly segregated have also shown important advances; in each case, this has axceeded that noted in the province in which the city is Bitustod. The incresse in activity in the iliret twenty-in months of war has raised the index by 35.6 p.c. In Winnipeg, and 3y 39.1 p.c. in Fancouver; the improvement in the other six centres has been even more impresive, the gaine ranging from that of $44.7 \mathrm{p}, \mathrm{c}$. in Montreal, to $74.6 \mathrm{p}, \mathrm{c}$. in Hamilton and 112.4 p.c. in Mindeor. Ths concentration of the heavy induetries in the last two municipalities ie responsible for the unuevally great expansion therein.

## STATISTICS OF HARNINGS.

Tite rosult: of the eigiti tabulation of statistics of weekly earnings as reported by establishments ordinarily employing 15 persons and over, are contained in the present report. The figures are preliminary. The note at the foot of this page gives a brief explanation of the current data on earning and their treatnent in the Bureau.

The $1,676,193$ men and women employed at Kov. 1 by the 12,775 establishments furnishing information to the Dominion Fureau of Statistics vere paid $\$ 45,279,584$ for services they rendered in the final week in October. In their last report. these establishments had indicated a staff of $1,658,248$ employees, whose earnings in the period of observation in September rad amounted to $\$ 43,717,942$. Thus a gain of 17,945 or 1.1 p.c., in the number of employees was accompanied by an advance of $\$ 1,561,642$, or 3.6 p.c. In the aggregate payrolls.

The per capita arerage earafige continued to rise; the gain of 65 cente shown in the weekly pay envelope in October as compared with Soptember was the largest reported in the brief experience of the payroll statistice. This is partly due to the fact that a number nf

## Note - The following briefly explains the etatistics requested on the questionnaire and theis treatment in this Bureau.

Industrial establishments are asked to furnish data showing the aggregate carnings of their employees in the last pay periods in the month, the employees and their earnings to be grouped according to the duretion of their pay periods. The sums reported are inclusive of datassions for National Defence Tax and Unemployment Insurance contributions.

Whe statements furnished show the amounts earned in monthly, Bomi-monthly, fortnightiy ant waicly pay periods;oceasionally data for other periods are given. Many firms furnish information for different categories of employees who are paid at each of these intervals, while others habitually use only one or two pay periods in their time-keeping organisations.

In the Bureau, the statistics of earninge reported for the variou periode exceeding a wook are reduced to the proportions which would be earaed in one weok, the numerator of the fractions ordinarily used for this purpose being six days, the standard working week; the denominatore of the fractions are the number of days included in the different pay periods, excluding only the Sundays.

In the case of those salarled employees whose earnings are calculated on an annul or a monthly basis, and consequently are not affected by the number of working daye in the period, fixed proportions are used to reance the earnings to a weekly basis, proportions which are not varled with the leagth of the calendar months.

The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one weels by the persons on the payrolls of the co-operating establishments. The employees reported are not in all cuses mecessarily employed for a period of $81 x$ days by one employers. As proviously atated in connection with the :isures of employment, the inclusion of casual workers to a greater extent than in the former surveys, recossitated b: the now questionnaires, constitutes a danger to the comparability of the present and the former statistics of employment.

## -6- <br> MOLOMMEN AND RARNLNGS.

Number of Persons Moployed at Nov. 1 and at October 1, 1941, by Bitabllamont furnshing Statistics, and Farninge of these Rmployees in One Fook in October and One Feek in Soptember.

1/ This classification camprises the following- iron and steel, non-forrous metals, electrical apparatue, lumber, musical instrunenta and clay, glass and stone products. The zon-durable group includos the remaining mannfacturing industries, as listed in Tables 4 and 7, Wh the exception of eletric light and power.
more or less casual ampiojees were laid off with the completion of seasonal work in certain industries. The payment of a cost-of-living bonus in many cases, and the raloing of ouch ellowances in others also contributed to the result, while overtime work likewise continued as a factor in certain establishmente. The average pay envelope of those on the staffs of the ce-operating employers was $\$ 27.01$ in the final week in October, an compared with $\$ 26.36$ in Sentember and \$26.03 in August.

The last bullotin on amployment and payrolls stated that the earnings of the $1,657,326$ Miloyees reported by the 12,720 establishments whose returns were then tabulated had ainounted to $\$ 43,694,382$ in the last week in September; the per caplta average was $\$ 26,36$. Nils average was not eltered by the slight differences in the figuree for some of the provinces, elties and industries. These revisions were due to the inclusion of late roturns and to the correction of errors in the reported information which became apparent by comparison with the etatistics for pay periods in the succoeding monthe.

The table on Page 6 contains a Enmary of the statistics for the provincea, the eleht leading cities, and the main industrial groups. In Table 7 at the ond of the bulletin appear data for a comprehensive liet of industries in the Dominion, whie Table 8 gives information for the leading industriob in the five aconomic areas. The statistics are subject to revision.

Ponding the astablishment of a more satisfactory basic period for an index number of earnings, the data furnished for the last week in May have been revised to serve as a starting point from which may be measured the current changes in the purchasing power distributed in payrolls by the establishmoats co-operating in the current surveys of employmeat and earninge. The omployees of such firms constitute a large proportion of the total working forces engaged in industries other than agriculture in the Dominion. The presentation of the figures of earninge in the form of an index number gives a clearer plcture of the situation than can be obtained from the use of the current aggregate or average per caplta figlares. The letter especially are affected very considerably by the dilution of labour which has been a marked festure of the situetion in recent months.

The firms furnishing information for the first of Novomber, as alraady otated, renorted the disbursement of $\$ 45,279,584$ in salaries and wages, as compared with $\$ 43,717,942$ la the last weok in September, while the payralls that the same employers distributed to those on their staffe at June 1 for services rendered in the last weok in May amounted to $\$ 38,373,951$. in indcx number bused upon this figure had, therefore, risen to 113.9 in the last week in September, and to 118.0 in the last week in October. The upward movement has been steadily maintained during the summer, the index of earnings in the period of observation in June being lo4.6. in July, 107.5 and in dugrat, 110.5. Meanwhile, an Index number of employment recalculated on the comparable base, rose to 102.9 at July $1,105.0$ at Aug. $1,106.5$ at Sept. $1,108.4$ at Oct. 1 sad 109.7 at Nov. 1. The increase in earniggs distributed in the last $81 x$ monthe has, therefore, considerably exceeded that in the numbers on the payrolls, in spite of the employment of Inoreasingly large numbers of inexperienced workers who presumably are usually taken on at the lower rates of pay. This situation results of courso from several factors. The growing concentration of worker in the highly-pald heavy industries, the extension of the sybten of paying wextime cost-of-living allowances, the increasc in the amounts of such allowancee, and the extensive use of overtimo work, bave contrimited in varying degree to the growth in sarnings, which is also probably seasonal in character.

The preliminary index mimbers of payrolis in manufacturing show even greater gains than those in all industries, cesplte the employmant of increasing? larger numbers of inexperionced workere; from 100 in the last week in May, the earnings of those employed in factorioe rose to 104.7 in June, to 108.4 in Julv, 112.01 n August, 116.61 n September, and 121.6 in the perlod of observation in October. Meanwhile, the index of employment on a comparable bsse, has risen to 131.7 at Nov. 1. A comnarison of these data with those prepared by the United States Bureau of Labor Statistics show similas movements; from Hay 15 to Nov. 15 , the American index of payrolls in manufacturing advanced by 14.9 p.c. and that of amployment by 7.8 p.c.

The 975,544 persons employod at Nov. I by the co-operating manufacturers throughout the Dominion were paid $\$ 26,916,095$ for their services in the preceding weok. The rame firms had.
ennloyed 962,797 persons at the beginning of October, and had disbursed $\$ 25,795,172$ in earninge in tho lest week in Septomber. The increase of $1.3 \mathrm{p} . \mathrm{c}$. In the number of employees was accompanied by that of 4.3 p.c. in thelr aggregate sarnings. The per capita average accordingly also bowed a gain, F1E10g from $\$ 26.79$ in the last week in Septomber to $\$ 27.59$ in the laet weak in October.

There was a further important advance in the employmont afforded in the durable goods division of manfacturing, and the earnings in this class also rose steeply; the increase in the former was $2.8 \mathrm{p} . \mathrm{C}$. , and that in the reported payrolls, $5.8 \mathrm{p} . \mathrm{c}$. In the non-durable clabs, on the other hand, a reduction of $0.1 \mathrm{p} . \mathrm{c}$. In employment was accompanied by an increase of 2. 7 p.c. in the reported earnings. This situation wes partly due to the fact that many of thos lald off were seasonal employecb, whose work was irregular; their carninge consequenty being relatively low; hovever, the pajment of higher cost-of-living allowances, together with other factors, contributed to the discrepancy shoun in the number of amployees and the reporten earninge in the non-durable good group.

The highest earnings in the manfacturing clasees were again those reported in the production of miecellazcous non-metallic mineral procucts, Largely petroleum products; those in the iron and steel, non-ferrous metal and puly and paper industries were also unusually high. These classer employ a large proportioz of isieb, and requize mayy bighly skilled and experienced worker\&.

In general, the lowest per capita averages were reportod in the tobacco, leather and textile groups, in which considerable numbers of females ars amployed; not only are the earnings in these categories affected by the sex distribution, but alno the age distribution of workers therein, since the women workers tond, in the main, to belong to the younger age groups. In consicering the rejative earninge, it mast also be noted that the existence or the absence of overtime work is also a factor, while the employment of any considerable number of casual workers greatly affects the per calita earninge in any industry.

In logging, there was a considerably increase in the number of amployees reported, accompanied by a slightly smaller gain in the aggregate earninge; the disparity is due in feceral to the fact that those added to the working forcer are usually taken or at the lower rates of pay, while it is also probable that many of the additional workers were not employed throughout the pay period reported. The per capita sverage showed a decline, falling from $\$ 18.88$ in the last wook in September, to $\$ 18.66$ in the last woek in Octobor. It must again be mentioned that the figuve of earninge given in this report make no allowance for the vaiue of board and lodging, frequently a part of the remuneration of employees in logeing camps.

Mmployment in mining showed a gain of 1.5 p.c. anả there was an increase of 7. 6 p.c. the ageregate carnings, probably due ia part to seasonal causes. The statistics show that 86,983 perton were peid $\$ 3,047,946$ for their services in the last woek in October, a per carita figure of $\$ 35.04$. The average per employee in the last weok in Soptember had been $\$ 33.06$.

In commaications, there was a seasonal decrease of 1.5 p.c. In the number employed, accompanied by a reduction of 1.8 p.c. in the weekly earnings. The declina in the lattaz wis to eowe extent du to the fact that tho data for the period of observation in Seotember had included the payment of a retroactive cost-of-living allowance by one large organization, which could not separate such payments frow the statement of the current wages and salaries paid. The average pay eaveloue contained $\$ 27.30$ in the period of observation in October, compared with $\$ 27.37$ in the a ame week in September.

The transportation industries reported at Nor. 1 an aggregate working force of 129,576 mon and wemen, whose Aarninge in the freceding week amounted to $\$ 4,392,651$. The former fleture was lower by 1.3 p.c. than that at Oct. 1 , but the reported earnings in the last weak in October were higher by two p.c. than those disbursed by the same employers in the final week in September. There was accordingly a large increase in the average earninge of the individual, which rose from $\$ 32.81$ in the last week in September, to $\$ 33.90$ is the same period in October.

Construction, on the whole, was quieter, there being a lose of five p.c. in the number of workere, and of 3.5 p.c. in the reported oarnings. There was a reducion in omployment in the rallway and the highway construction and maintenance group, but bullding showed an advance.

The per capita earnings in the group as a whole rose from $\$ 23.65$ in the last week in Ssptomber, to $\$ 24.01$ in the period of observation in October.

The service ostaklishments furnichine returns showed a seasonal decline in the mumber of their omployees, together with a modorate gain in the aggregate earnings reported. The contents of the average pay envelopes increased from $\$ 16.40$ in Soptember, to $\$ 16.75$ in the last week in Cctober. These averages are lower than in ary other industrial group, partly because of coasicerable proportions of female and part-time workers, and partij because the earninge quoted exclude the value of board and lodging, in many cases a part of the remneration of ermloyees in hotels and restaurants. This group accounts for over $61 \mathrm{p}, \mathrm{c}$. of those in the service industry.

In trade, there was a gain in the number of persons on the staffa, accompanfed by a rathor ETeater advan in the agETegatc payrolle distributed; the former were higher by $1.6 \mathrm{p} . \mathrm{c}$. and the latter by 1.8 p.c. The reported per capita earnsngs, therefore slightly increased, being $\$ 23.07$ in the last weak in October as compared with $\$ 23.02$ in the last week in September.

In the ficancial croup, 63,252 men urd women were reported to have earned $\$ 1,850,450$ in the last week in Cotober, per cantta average of $\$ 29.2 .6$. In. the last return, their emplojees had aggregated 62,978, and their barning, $\$ 1,829,831$, an average of $\$ 29.06$ per employee. The inclusion of the data for the financial crganizations raises the general per capita figure of earninge in tho Dorinion to $\$ 27.09$ in the last week in October, as compared with $\$ 26.46$ in the same period in September.

A review of the data for the varlous provinces shows generally increased employment except in Prince Rdward Island and British Columbia; in the former, a decline was noted, while in the latter the situation, on the whole, showed little change. In all nine provincee, however, the aggregate earnings reported for the one week in October were greater than in ths corresponding period in September. The average por caplta earningewere therefure infger.

Table 8 at the end of this report gives preliminary data on employment and earninge for a number of industries is each of the five economic areas. The industrial groups included are those amploying considerable numers of persons; in those which appear in each of the economic areas, it is interesting to note the similarity in the levels of the average earnings, in relation to each other and also in relation to the general average in the same area. Thus, in iron and steel the reported earnings in each case were considerably above the average for manufacturing, boing also highcr than in most other classes of factory production, as well as exceeding the rillindustries figure in the same area. The variation in the aarnings of those employod in isun and steol manufacturing was from $\$ 28.96$ in the Niaritime Provinces in the last week in October and $\$ 30.72$ in the Prairie Provinces, to $\$ 31.85$ in Quebec, $\$ 32.27$ in Ontario and $\$ 32.96$ in British Columbia. The occurrence of vurying proportions of overtime work contribites lergely to the differences in many of the figurss shown in the various ainas.

Among the non-manufacturing industries, the lowest figures, in general, are those roported in logging and services, in both of which board and lodging freouently constitute part o: the remumation of employees; allowance is not made in these statistice for earnings in this form. In trade, the earnings in the lact week in September varied from $\$ 20.35$ in the Maritime Provinces to $\$ 24.11$ in the Prairie Provinces, where the wholesale group employs an unusually large proportion of those engaged in trading establishments. In general, the saminga in the wholosale division are higher than those in retail establishments, in which the proportion of women workers is higher, as is also the proportion of part-time workere. In all cases, the earnings of those engaged in transportation are ccnsiderably above the average, and in most provinces, the earnings of thces in mining are also relatively high.

Rmployment and payrolls advanced in each of the eight cities for wifch information is soparately compiled. The gains in the aggregute earnings ranged from those of l.f p.c. In Hamilton and three p.c. in Windsor, to those of $5.8 \mathrm{p} . \mathrm{c}$. In Ottawa and $6.6 \mathrm{p} \cdot \mathrm{c}$. in Winnipeg. In Montreal, the reported payrolls rose by four p.c. and in Toronto, by 3.7 p.c. from the period of observation in September to that in October.

Except in Hamilton, the average per capita earnings in the cities were also greater in thn last wesk in October than in September. In that city, however, the increase in employment
was at a slightly higher rate than that in the reported payrolls; the per capita weokly eurnings in October were $\$ 29.32$, compared with $\$ 29.49$ in September.

## 

 indicatec at Nov. 1. The exceptiors were Pribce Edwara IEland anc Exitisi Cojumble; the former showed a general reduction due to curtailment in construction, while in the latter there was on the whole no change in the situation. The largest percentage gains were thobe of 3.9 and 4.6 in Now Brunswick and Sackatchewan, respectively. Firms in Quebec reported the greatert number of additional employees, having takon on 9,239 extra workers; this was a grin of $1.8 \mathrm{p}, \mathrm{c}$. The improvement in the provinces in which acditions to staffe were reported resulted in most cases in tho establishment of new, all-time high levels of industrial ectivity.

Maritime Provinces.- Increases in employment were recorded in Nova Scotia and Now Prunswick, while the tendency was downward in Prince Edward Ieland. On the whole, there was a. seasonal advance in the Maritime Provinces taken as a unit. Returas were recelved from 922 employers in this area with 134,363 men and women on their payrolls, as compared with 131,225 at the beginning of October. Manufacturing as a whole showed moderate improvement; additions to staffs were recordca in iron and steel and some other piants, but lumber and animal food factories were seasonally slacker. Among the mon-manufacturing divisions, heightened activity wäs indicated in construction, mining and trade, and there were pronounced seasonal gains in logging camps.

Greater improvement had been recordec at Nov. 1, 1940, by the 870 co-operating establishmente, whose payrolls had includod 99,526 mea and women; the index was then many points lower than the latest figure of 179.6, the marimum to date.

Quebec. - Further important expansion was shown in Quebec, chiefly in logging and manufacturing. Ruilding, steam railway operation, mining and retail trade also afforded rather more employment. On the other hand, thare were lossee in bhipning, highway and railway construction and maintenance, commanications and services. Within the manufacturing group, the lumber and vegetable food diplsions reported a seasonal falling-off; there were, however, moderate increases in rubber, beverage, clay, glass and stone and non-ferrous metal plants, together with large gains in chomical and iron and steel works.

The 3,196 employers furniehing returns enlarged their forces by 9,239 persons, bringing them to 516,492 at Nov. 1. Mhis increase, of $1.8 \mathrm{p}, \mathrm{c}$. brought the index to 177.1 , a new all time maximum. Activity was much greater than at Nov. 1,1940 , although a considerasly largik Edvance had then been indicated in the 3.112 reporting establishments, whose Etaffi had numbered 426,384.

Ontario. - The trend continued upward in ontario, bringing employment generally in the province to a new high. The 5,525 firms whope data were tabulated reported 703,152 employees, or 3,253 more than in the preceding month. The average change from October to November in the twenty preceding yeare for which statistics are available has been a docline, so that the latest advance is contra-ceasonal; it was, however, not equal to that recorded at the beginning of November in 1939 or 1940.

At the date under review, there were fuirly large gains in logging as the campe gradually opaned for the winter's operations; the difficulty of obtaining labour probably accounted for the fact that the increase was smaller than usual for the time of year. Metallic ore mining and trade showed moderate improvement from Oct. 1 , while there was further important expansion in manufacturing. This took place chiefly in iron and steel plants, which absorbed some 8,800 additional workers. Increused activity was also remorted in the food, textile, chemical, nonferroun metal. miscellaneous non-metallic mineral producteanc miscellaneous manufacturing divisione. Of these gains, those in chemical works were greatest. On the other hand, the vegetable fond, beverage, electrical apparatus and lumber induntries reported reductions in staffs, the seasonal losses in fruit and vegetable canneries being particularly marked.

Transportation, construction and maintenance also released employees; the decline in the latter was considerable. The general index in Ontario at the latest date stood at 173.2, a new maximum; this figure was nasrly 31 points higher than at Nov. 1 of last year, when statistics had beon received from 5,361 employers with 569,654 men and women on their paylists. The advance then indicated had been on a larger scalc.

Prairie Provinces, - There were substantial increases in employment in Manitoba and Sablutchewan at Nov. 1, 1941, together with a slight gain on the whole in Alberta. Returns were complled from 1,795 firms in the Prairie Provincee, heving 184,190 employees, ab against 181, B71 at Oct. 1. Manufacturing, logging, coal-mising and building afforded more employment, while there were declines in commancations, transportation and rallway construction and mainteance. Most of the improvement in manufacturing took place in food, chemical and fron and steel facturies. The expansion in the Prairie Area was contra-seasonal, the trend having been retrogressive at Nov, 1 in thirteen of the twenty preceding years for which data are avallable. The index wBs higher then in any other month of the record, standing at 136.1, compared with 119.7 at Nov. 1, 1940. Statement had then been tabulated from 1,751 establishments. employlag 157, 065 workers; this was an increase of 2,022 from their Oct. 1,1940 payrolls.

British Columbia. - No general change in employment was recorded in British Columbia; the staff of the 1,338 employers furnishing returns aggregated 137,996 , practically the same number as in the preceding month. There were increases on the whole in munufacturingo fining and retall trade. Transportation, constmetion and logeing, however, were quieter. In the group of factory employment, there were important, seasonal reductions in food cameries; the lumber and non-ferrous metal groups were also quieter. On the other hand, pulf und paper, chemical and iron and steel plants were brisker, the gain in iron and steel works being substantial.

Mmployment generally was more active than at Nov. I of last year, when 1,299 establishments had reported a total working force of 112,091 persons, compared with 113,423 in the preceding month. The index then Btood at 126.3 , as compared with 149.4 at Nov. 1, 1941; the latter figurs (the Bame as that at Oct. 1) was higher than in any earlier month for which data are avallable.

In Tables 1 and 5 are giver index numbers by economic areas.

## FMPI OYMENT BY CITIAS.

Additions to staffs were recorded in each of the centrea for which data are segregated, firms in Montreal, Guobec City, Toronto, Gttawa, Hamilton, Windsor, Winaipeg and Vancouver veportintitecivity. The increases ranged from that of $0.6 \mathrm{p}, \mathrm{c}$. in Windeor to $2.6 \mathrm{p} . \mathrm{c}$. in Toronto and 3.7 p.c. in vuebec city. The voiume of employment in each of these elght cities was greater than at the beginning of Noverber of 1940 , or indeed, than in any other month for whinh information has been tabulated.

Sontreal. - Turther improvement of a contra-seasonal nature took place in Montreal at Hov. 2, when 3,834 persons were added to the peyrolls of the 1,848 comperating firms, who amployed 239, 957. Construction and manuacturing showed heightened activity. The increases in the latter took place mainly in iron and steel factories, but beverage, food and some other works also reported gains. On the other hand, shipping was quieter, and there was little general change in services and trade. An increase had also been noted at the same date of laet jear: the index was then many pointa lower than that of 158.2 at the latust date, when a new maximum was established. Statemente for Nov. 1, 1940, had been received from 1.803 establishments, providing work for 193,685 men and vomen.

Quebec City.- In Quebec, 219 employers reported a staff of 26,445 persons, compared with 25,495 at Oct. 1. There was a elight increase in trade and a substantial gain in manufacturing, while construction and services were rather quieter. Fmployment on the whole was more active than in any other month for which data are avalable, the index being decidedly higher than at the begining of November, 1940, when the 217 co-operating businebemen had employed 20,751 workere, compered with 20,156 in the preceding month.

Toronto. - There was an important increase in the payrolls of 1,903 firms in Toronto, who

## EMPLOYMENT IN LEADING CITIES

had 215,143 men and women in their employ, a number greater by 5,380 than in their last roport. Most of the expansion took place in manufacturing; in this division, food, textile, non-ferrou metal, iron and steol, chemical and other industrios Ehowes improvement, that in chomicale and iron and steel being most pronounced. Trade also afforded more employment, but transportation and construction were quieter. A smaller advance had been registered at the beginning of November of a year ago, and the index was then some 32 points lower; the 1,834 emplovere makice returne for Nov. 1,1940 , had reported etaffs aggregating 175,804, compared with 173,017 in the preceding month.

Ottawa. - In Ottawa, curtailment was shown in manufacturing, where it took place mainly in lumber mills. Construction, however, was brisker. The 242 etablishents furnishing data erroloyed 21,655 persons, as againet 21,222 at Oct. 1 . Joployment, at a rew maximum for this record, wan in decidedly greater volume than at the same date in 1940. The trond had then aleo been upward, according to information from 237 omployers of 17,923 workors.

Hamilton- Industrial activity agsin increased in Familton at Bov. 1; the 340 co-operating firms reported 57,985 mployees, a corpared with 56,741 at the begiming of October. Manufacturing afforded decidedly more employment, mainly in the textile, olectrical apparatus and iron and steel groups. Moderate gains were also made in conotruction, servicen and trade. Ixpansion on a meller ecale had been recorded at the beginning of lovember of last year, when the index was many polat below the latest figure of 17\%.7. The Mov. 1, 1940, paylists of the 334 co-operating emplcyers had included 43,854 men and women.

W1ndeor - The oftuation in Windsor hoved further improvement: 201 establishments reported 33,253 perrons in their employ, compared with 33,044 at the beginning of October. The increase took place mainly in the 1 ron and steel industries; construction and trade, on the other hand, were rather slacker. Although a larger gain had been indicated at the same date of a year ago, omployment was then at a decidealy lower level. Statistics for Nov. 1,1940 , had been tabulated from 195 firms, whose taffe aggregated 26,082.

Winnipeg.- Employment advanced in Winnipeg, according to 559 employers with 55,531 vorkere at the beginning of November, as compared with 54,426 in their last report. Manufacturing was brisker, ospecially in the chemicsl, food and iron and steel divielons; contruction slso bowed a moderstely upward movement, while transportation and eervicee were quieter. The 538 concerne furnishing information for the first of November of last year had 47,035 men and women on thelr paytolls; the index of employment then stood et 107.5 , compared with 133.2 at the date under reriew. Thla is the bighest figne yet recorded.

Vancouver - There was a contra-seasonal expansion in Vancouver, where the 587 co-operating estabilshments had 57,464 persons on their gtaffe, or 1,070 more than in the preceding month. finuffacturing reported an important gain, mainly in iron and steel plants, ara trade aleo showed inprovement, while conetruction was quieter and there were mall 108 een in commalcations, transportation and services. Industrial activity generaliy was at a bigher levol than at the reginalng of November of last year, when curtallment had been indicated by 568 flrme, whose sanloyess had numbered 43,500 , a reduction of 557 from Oct. 1, 1940.

Index number by citios are given in Tablee 2 and 6 , while Chart 3 shows the course of omployment in certain centres ince 1938, the curves being plotted from the indexes given in Table 2.

## FMPIOYMENT BI INDUSTRIES.

Manufacturing. - Employnont in manufacturing at Nov. l showed ite tenth consecutive increase, in the longest series of uninterrupted advances in the nearly twonty-one yeare during which the current surveye have been made. The latest gain was substantial, amounting to $1.3 \mathrm{p} . \mathrm{c} . \mathrm{i}$ It wer nevertheles the smallest in this period of continuous improverent. The trend of employment at Nov. 1 in Iffeen of the years aince 1920 has been downard, so that the expansion at the date under review is contra-beasonal. Considerably exceeding that indicated at Nov. 1 . 1940, the latest increase provided employment for approximately the same number of persons as were added to the payrolls at Nov. 1, 1939; the percentage gain then, howover, was greater, at

Chort 4

2.1 p.c. In the few other years since 1920 in which the movement at Nov. I ha been favourable, the increases wore elight.

Ths 7,038 manufacturer co-operating at the beginning of November, 1941, reported a comolned working force of 975,544 men and women, or 12,747 more than in the preceding month. The unadjusted index, (based on the 1926 average as l00), rose from its previous maximum of 185.0 at Oct. 1, 1941, to a new high of 187.6 at Nov. 1. This f1gures was 29.7 p.c. above that of 144.6 at Nov. 1, 1940, until now the highest for November.

Since the gain at the date under review is contra-seabonal, the seasonally-adjueted index 81. A dranced, rising from 179.3 at Oct. 1, to 185.9 at Nov. 1. These two figures, like the etrresponing crude indexeb, are the highest yet recorded.

As compered with the preceding month, there was a particularly large increase of 15,199 persons in iron and steel plants. This groatly exceede that reported in any other November for which dats are available, having indeed, rarely been exceeded in any month in the years ince 1920. Employment in chemical factories also showsd a further important expansion, while there were smaller advances in animal food, mulp and paper, textile, rubber, non-ferrous metal and miscellaneous manufacturing plants; in the last-named, the gain took place mainly in the production of scientific instruments.

Seasonal declines at Nov. 1 as compared with October were reported in veretable food factories, which released nearly 6,500 workere; in lumber mill there wa also a considerable seasonal fallingoff. Losses on a small scale took place in musical instrument, beverago and electrical apparatu plants and in central electric stations.

Bmployment in practically every branch of manufacturing was briskar at Nov. 1 than at the sam date in any other year for which information it availablo.

For Nov. 1. 1940, 6,762 manufacturing establishments had reported 744,144 employnes, compared with 740,073 in the preceding month.

Calculated on the 1926 average as 100 , the unadjusted indexen of employment in manufacturing have been follows at the beginaing of Novmber in the last few yeare:1941, 187.6; 1940, 144.6; 1939. 122.1; 1938, 110.9 and 1937, 119.0. In 1929, when industrial activity, on the everage, was at its maximum in the pre-war period, the Nor. i index had been 112.2.

Losinge - Data were recelved from 442 firme mploying 65,156 men, or 13,535 more than in the praceiing month. The expansion was decidediy less than that reported at Nov. I in any recent year. It is probable that difficulty in securing holp is largely responsible for the relatively small gain. The index, at 219.6, was lower than that of 258.6 at Nov. 1 of last year, and was also below the Nov. 1, 1937, figure of 306.3 ; with these exceptions, it was higher than at the aame date in any earlier year of the rocord. There wero advances in logging at the latest date in all provinces except British Columbia, those in quebec bsing most extensive.

Mining. - Improvement was indicated in the mining of metallic ore and of coal, whil. quarrying and other non-metallic mineral mining showed no general change. The forces of the 420 minlng operators furnishing returns totalled 86,989 persons, compared with 85,713 at Oct. 1. A much smaller increase had been noted at the beginning of November, 1940, and the index wae then scme eleven points lower. With infrequent exceptions, the movement in mining has been upward at Nov. I in other year for which data are avallable; the latest increase approximated the average for that date.

Commancations.- Telephones and telegraphs showod a falling-off in activity, a it customary in the late autum, the decline beling of normal proportions. The companies and branches whoso statintics were tabulated had 26,715 workers in their mploy, or 402 fover than at Oct. 1. The index of employment was some ten points higher than at Nov. 1. 1940, when a smaller lose had boen noted.

Transportation. - A seasonal decrease was reported by the 552 co-operating employers in the tranaportation group; their taffs nmbered 129.576 , compared with 131,312 in the preceding month. Shipping and stevodoring and local transportation and Btorage showed reduced activity, while thers was a slight gain in railway operation. The contraction in empioyment indicatai in transportation at the beginning of November of a jear ago was not so large, but the indox was thon aine points lover than that of 102.8 at the date unier review.

Construction and Maintenance. - Curtallment was recorded in highway and railwsy cunstruction and maintenance, but buildiag showed further improvement. Statements ver* recelved from 1,450 contractors employing 185,513 workers, compared with 195,243 at the beginning of October. This genaral reduction is seasonal, but the lose was slightly below average, according to the experience of the last twenty years, The index, at 147.7 at Nov. I. 1941, wa higher than in any other November in the last decade.

Services. - Fotels and restaurants were seasonally quiet, and there was a small decreasa In laundering and dry-cleaning establishments; 6.16 firms in the service group reported 38,706 men and women in their employ, or 445 fewer than at the beginning of October. The index, at 173.7, Wab considerably above that of Nov. 1, 1940, although a moderato increase in staffs had thon besn indiceted by the co-operating employers.

Trade. - The tread of employment in trade continued upward, 2,700 workers oelng added to tho furces of the 2,196 trading entablishments furnishing roturns, whos employoes aggregated 167.994. Ths improvoment occurred wholly in ratall stores, wholesale houses being rather quieter. The indox in this division, at 163.4 at Nov. 1 , was at itB maximur for that dats in the years ince 1920. The gain indicated at the beginning of November, i940, had been on a maller scale. The percentage advance this year was fractionally above the average at Nov. 1 in tho yeare since 1920.

Finance. - The 960 financial institutions and branches furnishing data for Nov. 1 smployed 63,252 mon and womon, as compared with 62,978 in their last report. The index stood at 122.5 ; in the preceding month it was 122.0 , while at Nov. 1,1940 , the figure had been 112.8 . The addition of the raturns for this group to those already given for the manufacturing, loggigg, mining, transportation, commacations, construction, service and trade industries brings to $1,739,445$ the number of persons in recorded employment in 13,536 establishments and lovers the general 1ndex of 167.6 in the elght industries just enumerated, to 165.4 . Wher the omployeed of financial organizations are added to the statistics for Oct. 1, 1941, the Index was lowered from 165.8 to 163.6. The index at Nov. 1, 1940, had stood at 139.? without the ijgures for the finance gronp, and at 137.8 when they were included.

Indsx numbers in industries other than finance are given in Table. तand an

## EMPLOYMENT IN THE UNITED STATES.

According to a report issued by the Bureau of Labor Statistics is Washington, Gwoloyment In the United Staten showed a small declin between October 15 and November 15. The docrease wa mainly due to seasonal recessions in manufacturing, transportation and in the finance and service groups. The contraction in manufacturing was less than ueval for the time of year. There were continued jurge advances in shipbuilding and aircraft production, together with smaller gains in verious other industries. These were offect, howevar, by seasonal iossce in canning and in the clothing industries, and $a l s o$ by roductions in many establishments whose operations have beon curtailod as a result of the prevaling shortage of raw materials. The index of employment in manffacturing at Nov. 15, 1941, was 134.5 , compared with 135.3 in the precailig month and 114.7 at Nov. 15, 1940. In the durable goods induptries, the index was 144.2 at Mov. 15, 144.0 at Oct. 15, 1941 and 115.5 in November, 1940. In the non-durable goods industries, the latest index was 125.2 , as compared with 127.1 at Oct. 15 and 113.8 at Nov. 15 , 1940. The bass uaed in calculating these indox numbers is the everage for the threo yars. 1923-1925.
