June 3, 1942

| THE APRIL EMPLOYMENTMSITUATION, |
| ---: |
| TOGETHER WITH STATISTICS OF EARNINGS |
| INTHE LASTAEEK IN MARCM. |

#### Abstract

NOTE:- In addition to the statistics of the present bulletin, other available data respectinE the current labour situation are published in the Monthly Labour Gazette, the official journal of the Department of Labour. These comprise information regarding the operations of the Unemployment Insurance Commission, including statistics of the mployment Service, and statements showing unemployment as reported monthly by trade unions.

> GENERAL SUMMARY.

EMPLOYMENT.

The upward movement indicated in manufacturing almost without uninterruption since the outbreak of war continued in force at the begimning of April; there were also general increases in employment in transportation, commuications, services and retail trade. On the other hand, eseasonal declines on a large scale were showm in logging; mining wes also seasonally slacker and thare wes a considerable falling-off in construction. On the whole, employment showed a slight increase, whose significance wes heightened by the fact that it was contreseasonal. The 13,037 establishments furnishing returns to the Dominion Bureau of Statistics reported a staff of $1,652,810$ men and women, or 1,053 more than at Mar. 1 . The index number (1926*100) rosis from 165.1 at that date, to 165.2 at the begiming of April. This was the maximum for April in the years since 1920. The latest figure was, however, siightly lower than the indexiss indicated in the last quarter of 1941, boing also fractionally less than at ian. 1 and Feb, 1, 1942; with these exceptions, it was the highest on record. The Apr. 1 , 1941, figure had beon 141.3,

In the experience of the years since 1920, employment on the whole has show curtailment at the berinning of April, due in the main to the completion of the winter's operations in logging camps before the commencement of spring-time activity in many other lines of business. The latest advince in the all-industries index, as already stated, was contra-seasonal, with the reault that the soasonally-adjusted indox number, which had stood at 172.1 at Mar. 1 , rose to 175.0 et thi boginning of April. This was a new all-time high.

The manufacturers co-operating in the survey for the first of April reported a personnel of $1,038,501$; this wan increase of 19,218 persons from Mar. 1 , which brought the volume of emplayment in manufacturing to now maximum. The greatest gains at Apr. 1 were reported in the manufacture of iron and stoel, chemical, textile, lumber and miscellaneous manufactured pioducts, whilo vegetable food, tobacco and pulp and paper plante were quieter. The losses wery largely of soasonal character.

The firms clasified in the oight loading industrial groups - manufacturing, logging, mining, commancations, transportation, construction and maintenance, services and trade reported that on or about Apr. 1, they had paid their omployees $\$ 46,959,08$ " for services rendered in the weok preceding. This was on increase of $\$ 845,331$, or $1.8 \mathrm{p} . \mathrm{c}$. a as compared with the sum of $\$ 46,113,756$ disbursed by the same employers at Mar. L. The statistics including the figures for financial institutions show that the $1,716,261$ persons in recorded omployment at Apr. 1 recolved a total payroll. of $\$ 48,855,431$ for services rendered in one weok. This was a per capita average

Chort /

of $\$ 28.47$, being 48 cents higher than the weokly average indicated at the boginning of March.
The 12,600 employers furnishing statistics for Apr. 1, 1941, had roportod on aggregate working force of $1,405,425$ persons. The index had then stood at 141.3 , while the figures for the beginning of April in recent years of the record have been as follows 11940 , $111.9 ; 1939,104.9 ; 1938,105.0 ; 1937,103.0$ and $1936,97.4$. The 1926 average is used as the base in calculating these index numbers.

The Course of Employment in the Feriod of the War.

As has been pointed out in the last fow bulletina on omploynent and earnings, the velue of any somparison of the volume in employment as presently existing with that indicated at the opening of the war has largely been nullified by the seasonal movements in industry from the oarly autimn to the late winter; industrial activity ordinarily reachos its peak for the year about Sejt. l or Oct. 1, after which fairly continuous sessonal curtallment usually reduces employment in the first thres or four monthe of the year to its lowest point in the twolve months. In view of these facts, the present comparison of the aituation indicated at Apr. 1, 1942, with that at Sopt. 1, 1939, is groatly abbreviated.

In the first thirty-one ronths of the war, employment in the Dominion bas shown en extremely importent growth; the interruptions in the genersily upward movement have boen wholly due to seasonal contractions in the industries particularly subject to such influences. These factors have recently reduced employment in a number of industries in both manufacturing and. non-manufacturing claises, hut nevertheless, from Sept. 1, 1939, to Apr. 1, 1942, the feneral index has risen by 38.1 p.c. The magnitude of the gain is emphadized by comparison with that of about $14 \frac{1}{2}$ n.c. In the five roars ending 122 1939, while in the period from 1921 to 1939, the eeneral index rose only by approximntely 28 p.c.

The manufacturing industries have, for obvious reasons, shown greater response to war-time demands than any other class. From Sept. 1, 1939, to Apr. 1, 1942, the index number of employment in factories rose by $72.9 \mathrm{p} . \mathrm{c}$. , while the general gain in the non-manufacturing groups, despite important seasonal curtailment in some branches, (notably construction) was three p.c.

Particularly impressive expansion has been reported in the durable goods industries, in which the index number has advanced from 100.4 at Sopt. 1, 1939, to 232.3 at Apr. 1, 1942, or by $131.4 \mathrm{f} \cdot \mathrm{c}$. The number of persons omployod in this catogory constituted elmost 53 p.o. of all those reported in manufacturing at Apr. 1, 1942, a proportion greatly in oxooss of that of $40 \mathrm{p} . \mathrm{c}$. ergaged in the durable goods industries at the outbreak of hostilitios. Enployment in the non-durable goods class has also show large gains during the period of the war, the index rising from 126.6 at Sopt. 1, 1939, to 174.4 at Apr. 1, 1942. This was an expansion of 37.8 p.c. Activity in thoso industries is unusually rolativoly quiot during the winter, owing to seasonal slackening in certain divisions, notably the food group. In spite of this factor, (which also cperates in the cese of some lines in the durable goods ostegory) omployment in the large ma;ority of manufacturing industries was considorably more active at the latest date than it was e.t Sept. 1, 1939.

In spite of the large seasonal losses recently recorded in construction and some other classon, employment in the non-manufacturing group as a whole wes, as alresdy stated, three p.c. hi.gher than at Sept. 1, 1939. Seasonal changes in these classes are largely responsible for the decline in this rate of incresse from 14.6 p.c. at Sept. 1, 194l, over Sept. 1, 193:, when the seasonal factor did not complicate the comparisons. The following are the percentage increases in the indox numbers in the indicatod industrios in the first thintyone months of the war; logging, 246.1 p.c., mining, 4.2 p.c., communications, 16.6 p.c., transportation, $10 \mathrm{p} \cdot \mathrm{c}$. , services, $13.9 \mathrm{p} . \mathrm{c}$. and trade, $13.4 \mathrm{p} . \mathrm{c}$. In building, a contra-seasonal increase of L6 p.c. as compared with Sept. l, 1939, largely resulted from wartime requirements. On the other hand, railway and highway construction showed declines of a seasonal character in this comparison; that in the highmay division was, however, also due to the prosent policy of postponing ell but essential work until the conclusion of the war, while in 1939 a considerable programe of road work had been undertaken for the relief of unomployment.

#### Abstract

With the present tabulation, the Bureau's current record of payrolls goes into its second year, the first statistics of the kind in the Dominion having been collected with the employment dasa for Apr. 1, 1941. However, the information received in the first two tabulations was incompleta, mainly becaiase a considerable number of employers found it impossible to furnish the additiona:. statistics without a period of prenaration. The payroll figures obtained in the first two surveys are therefore not wolly comparable with those sinco tabulated, and have boon disregarded. Comparisons with the corresponding period of last year will accordingly be made commencing only with the report for June 1. The statistics of the present bulletin are subject to revision.

The 13,037 establishments furnishing information at the beginning of Aoril reported the distribution of $\$ 46,959,087$ in weekly salaries and wages to the $1,652,810$ men and women on their stafi's at that date. These same employers had roported 1,651,757 workers at the first of March, wholse earnings in the woek preceding had amounted to $\$ 46,113,756$. There was accordingly a gain of 0.1 p.c. in the number of their employees at Apr. 1 , together with an increase of $\$ 345,331$, or $1.8 \mathrm{p} . \mathrm{c}$., in the aggregate payroll. The per capita average, at $\$ 28.41$, was higher by 49 cents than the average of $\$ 27.92$ paid at Mar. 1. These two figures are the highest in the period of observation, considerably exceeding the previous maximum of $\$ 27.65$ roportod at Fob. 1.

In "he last bulletin on employment and payrolls, the earnings of the $1,651,067$ employees of the 12,923 establishments whose returns were then tabulated were given as $\$ 46,093,114$, paid on or about Mar. 1 for services rendered in the last weok in February. The per capita avarage based on these totels was also $\$ 27.92$. The present report shows slight alterations in soms of the figures proviously issued, mainly as a result of the inclusion of late returns.

NOTE:- Tha following briofly explains the statistics requested on the questionnaire and thair treatment in this Bureau.

Industrial establishments are asked to furnish data showing the aggregate earnings of their employers in the last pay periods in the month, the employees and their earnings to bo grouped accorling to the duration of their pay periods. The sums reported are inclusive of deductions for National Defence Tax and Themployment Insurance contributions. Cost-of-living allowances aris also included.

The statements furnished show the amounts earned in monthly, semi-monthly, fortnifhtly and weokly pay periods; occasionally data for other periods are given. Many firms furnish information for different catogories of omployees who are paid at oach of these intervals, while others labitually use only one or two pay periods in their time-keeping organizations.

In the Buroau, the statistics of oamings roported for the various periods exceoding a weok are reduced to the proportions which would be earned in one weok, the numerator of the fractions ordinarily usod for this purpose being six days, the standard working week; the denominators of the fractions are the number of days included in the different pay periods, oxcluding only the Sundays.

In the saso of those salaried employees whose earnings are calculated on an annual or monthly basis, and are consequently not affected by the number of working days in the period, fixed proportions used to reduce the earnings to a weekly besis, proportions which are not veried with the leagth of the calender month.

The sum resulting from these various calculations are then aggregatod to give the total enounts which would be paid for services rendered in one woek by the persons on the payrolls of the co-opereting establishments. The employees reported are not in all cases necossarily omployed for in period of aix days by one employer. As has previously beon stated in comnection With the figu:es of employment, the inclusion of casual workers to a groater extent than in the formar suiveys, necessitated by the now questionnaires, constitutes an olement of inoomparability in the prosent and the former statistics of employment.

## MPLODMFY AND FARNINGS.

1/ This claesiflcation comprises the followag-iron and teel, non-forrous metale, lectrical apperetus, lumber, mulical instiments and clay, glass and stone products. The nondurable group includen the remaining mamufacturing industries, at ilsted in Tablen 4 and 7 . With the excoption of olectric ilgit and power.

- Bevined.

The Tably on Page 6 contains a summary of the statistics for the provinces, the eight leading nities, and the main industrisl groups. In Table 7 at the end of the bulletin appear date for a comorehensive list of industries in the Dominion, while Tables 8 ard 9 give information for cortain iniustries in the five oconomic areas and in tho oicht leading cities. The statistics are subject to revision.

Index Numbers of 5arnings.- Pending the establishment of a more satisfactory basic period for an index namber of earnings, the statistics of payrolls reported at June as having been paid for servises renderad in the last weok in Kay have been revised to serve as a starting point from whish may be measured the current charges in the purchasing power distributed in salaries and wages by the establishments co-operating in the ourrent surveys of employment and earnings. The omployees of such firms constitute a large proportion of the tatal number of wage-earners eagaged in industries other than agriculture, governmental, educational, domestio end personal service in the Dominion. The prosentation of the payroll data in the form of an index number gives a clearer picture of the situation than can be obtained from the use of the current aggregate or average per capita ficures. The latter especially are very considerably affected by the dilution of labour which has been a marked feature of the situation in recent months.

The recent movements of employment and earnings for the oight leading industrios and in manufacturing as a whole, are show for the Dominion in the following table; the index numbers of employment have been converted from their original babe, 1926=100, to june 1, 1941, for comparison with the index numbers of payrolls.

Indox Numbers of Employment and Payrolls, based on June 1, 1941=100, Together with Per Capita Weokly Eernings.

| Jan. 1 | 108.4 | 112.3 | 26.13 | 111.4 | 114.6 | 26.32 |
| Feb. 1 | 108.2 | 118.5 | 27.65 | 113.8 | 126.3 | 28.39 |
| Mar. 1 | 108.0 | 119.4 | 27.92 | 116.5 | 130.2 | 28.58 |
| Apr. 1 | 108.0 | 121.6 | 28.41 | 118.7 | 134.3 | 28.94 |

The increase of eight p.c. in recorded employment since June 1 of last year has beon accompanied by a gain of $21.6 \mathrm{p} . \mathrm{c}$. in the aggregate salaries and wages distributed by the cooperating esteblishments. The latest index of payrolls, at l2l.6, is the maximum in the period of observetior, slightly exceeding the previous high figure of 119.5 at Dec. 1. The allindustries per cepita average rose from $\$ 27.92$ at Mar. 1 , to $\$ 28.41$ at Apr. 1. This increase partly resulted from the changes in employment recently indicated; the losses recorded have taken place meinly in the industries in which the earnings are below average, while the indicatod gains have been chiefly in the industries in which the oarnincs are relatively high. To some oxtent the increase in the per capita figure may therefore be of a seasonal character, although overtime work has been a factor in many cases. The changes recorded in the cost-of-living index in the first $l$ iew months of 1942 have not sufficed to alter the rate of the cost-of-living bonus as establisheci late in 1941.

In the manufacturing division, the index numbers of employment and payrolls have shown especially large advances in the period for which data have been prepared. A rise of $18.7 \mathrm{p} . \mathrm{c}$. in employment since june 1, 1941 , has been accompanied by a cain of 34.3 p.0. in the eggregate payrolls distributed. The per cepita figure, at $\$ 28.94$ paid on or about Apr. 1 , is the highest yet recorded, representing an increase of $\$ 3.37$ since June 1,1941 , in the weekly averace. This increase, which is particularly impressive in view of the continued dilution of labour, partly represents the payment of higher wage rates over the ten months, and a more extensive use of the cost-of-living bonus, but is also partly accounted for by growing activity in the heavy manufacturing industries, together with overtime work. As already stated, the recent losses in employment in certain classes of manufactures, as in a number of nonmanufacturing divisions, have taken place mainly in groups in which the average earnings are ordinerily lower than in the heavy manufacturing industries, a change in the composition of the total working force which has tended to maise the per capita average. Accordingly, it may be concluded that the more recently recorded increases in the per capita average for menufacturing as well as in the more general figures, are to some extent seasonal in character.

Earnines by Industries.- The employees on the payrolls of the comoperatine manufacture $\overline{r s}$ throughout the Dominion, numbering $1,038,501$, were peid $\$ 30,050,974$ for their services in the preceding weok. The same firms had employod' $1,019,283$ persons at the beginning of Narch, when they had reported the distribution of $\$ 29,133,269$ in weekly earnings to their staffs. The increase of $1.9 \mathrm{p} . \mathrm{c}$. in the number of employees was accompanied by that of 3.2 p.c. in the aggregate payrolls. The per capita weekly average accordingly also showed a considorable gain, rising from $\$ 28.58$ received on or about Mar. 1 , to 828.94 at Apr. 1 . The latter is the highest per cepita figure yet recorded in manufacturing as a whole.

A further important increase was indicated in the production of durable goods, in which the reported payrolls showed a relatively larger gain, employment in this class advancing by 3.1 p.c., while the weekly payrolls rose by 4.3 p.c. sinco Mar. 1 . Where the irdex in the former has risen by 26.2 p.c. since June 1,1941 , that of earnings has advanced by 46.1 p.c.; this growth is partly due to overtime peyments. In the non-durable products group, there was an increase of $0.6 \mathrm{p} . \mathrm{c}$. from Narch, while the earnings rose by $1.7 \mathrm{p} . \mathrm{c}$. The index of omployment in this class has risen by $12.4 \mathrm{p} . \mathrm{c}$. from June 1,1941 , while the increase in the payrolls has amounted to 22.5 p.c.

The highest eamings in the manufacturing classes were again those reported in the production of miscellaneous non-metallic minerals, largely petroleum products, with those in iron and stoel plants coming in second place. The oarnings in the pulp and paper, non-ferrous metal, electrical apparatus and beverage industries were also unusually high. These classes employ a large proportion of males, and require many highly sidlled and experienoed workers.

In general, the lowest per capita averages were reported in the tobacco, leather and textile groups, in which considerable numbers of females are employed; not only are the oarnings in these categories affected by the sex distribution, but also by the age distribution of workers therein, since the female employees tend, in the main, to belong to the younger ago groups. In comparing the earnings reported in various industries, it must be noted that the existence or the absence of overtime work is a factor of importance, while the employment of any considerable number of casual workers ereatly affects the per capita oarnings in any industry.

Employment in logeing showed a further seasonal decrease, qmounting to $19.2 \mathrm{p} \cdot \mathrm{c}$, . while the aggregate payrolls declined by 13.7 p.c. As a result of these changes the per capita weekly average showed a gain, rising from $\$ 18.97$ paid at Mar. 1 , to $\$ 20.26$ paid at Apr. 1. The difference is largely due to the retention of the more highly paid workers as operations in many camps drew to a close. It must again be mentioned that the figures of payrolls given in this report make no allowance for the value of board and lodging, frequently a part of the remuneration of employees in logging camps.

There was reduction of $0.8 \mathrm{p} . \mathrm{c}$. in employment in mining, in which the reported ageregate of eamings decreased by less than a tenth of one p.c. The statistics show that 81, 762 persons were paid $\$ 2,870,888$ at Apr. 1 ; this was a per capita figure of $\$ 35.11$. The average pay envelope of those employed at Mer. 1 hed contained $\$ 34.84$.

In communications, there was an increase of 1.6 p.c. in employment, while the reported payrolls rose by 2.8 p.c. Accordingly, the average earnings showed a further advance, rising

Irom $\$ 27.68$ stated at Mar. 1, to $\$ 28.02$ paid at Apr. 1.
The trensportation industries reported an aggregate working force of 124,721 men and vomen at AFr. 1, when the weekly earnings distributed amounted to $\$ 4,319,807$. The former figure was higher by 1.5 p .0 . than that at Mar. 1, while the payrolls increased by 2.3 p.c. The average earnings were rather lower, the per capita figure being $\$ 34.64$, compared with the revised average of $\$ 34.71$ paid at Mar. 1.

Further seasonsl $1088 e 8$ were indicated in construction, in which the personnel declined by $5 . c$ p.c., and the ageregate payrolls in the group as a whole by 0.8 p.c. There were coatracticns in employment in building, highway and railway construction and maintenance; the weekly payrolls reported in building were rather higher, but those in highway and railway work were lower. The per capita average eamings gained in each of the three divisions, with the release of workers in the lower-paid groups; in the industry as a whole, the averago earnings rose from $\$ 25.28$ at Mar. 1 to $\$ 26.53$ at Apr. 1 .

The service establishments fumishing retums reported 2.2 p.c. more employeos, with an increase of much the same size in the reported payrolls. The average enmings, therefore, showed practically no change, boing $\$ 16.98$ at Apr. 1 , as compared with $\$ 16.99$ at Mar. 1. These averages are lower than in any other industrial eroup, partly because of considerable proportions of female and part-time workers, and partly because the oarmings quoted exclude the value of bcard and lodging, in many cases a part of the remuneration of employees in hotels and restaurants. This group accounts for some $60 \mathrm{p} . \mathrm{c}$. of those reported in the service industry.

There was a gain of 0.8 p.c. In the employees indicated in trade, in which the aggregate payrolls distributed were greator by $1.7 \mathrm{p} . \mathrm{c}$. The per capita earninga were therefore somewhat hieher, rising from $\$ 23.84$ at Mar. 1 , to $\$ 24.06$ at Apr. 1 .

In the financial group, 63,451 men and women were reported to have been paid $\$ 1,896,344$ at Apr. 2, a per capita average of $\$ 29.89$. In the last return, their employeos had aggregated 63,363 , and the weakly oarnings were given as $\$ 1,893,527$, an average of $\$ 29,88$ per person. The inclusion of the data for financial organizations raised the general per capita figure of arnings in the Dominicn to $\$ 27.99$ at Mar. 1 , and $\$ 28.47$ at Apr. 1 . Without the statistics for the financlal groupg the weekly average at the former date was $\$ 27.92$, and at the latter, $\$ 28.41$.

Earrings by Provinces.- Firms in Prince Edward Island and New Brunswick reportod reductions in employment and in the aggregate weokly payrolls disbursed. However, the general per capita averages in these provinces were higher. There was also a falling-off in the number employed in Quebec and Alberta, but the reported aggregates of salaries and wages were greater than at Mar. 1; accordingly, the average earnings in each showed an increase. In the remaining provinces, the indicated staffs and the disbursements in weekly payrolls wore higher at Apr. 1. In Nova Scotia, Ontario, Manitoba and British Columbia, the contents of the averago pay envelope were rather greater at Apr. 1 than at Mar. 1 , but in Saskatchewan there was a decline in the ner capita figure.

Preliminary data on employment and earaings for a number of industries in the oconomic areas are given in Table 8. Manufacturing again reported increased omployment in each of the areas, accompanied by proportionately larger advances in the weokly wage payments, so that the average per capita oamings genorally advanced. Except in the Maritime Provinces, the number of employees and the total payrolls in transportation also showed gains; improvement was general in trade. Logging, except in British Columbia, reported seaconal curtailment in the personnel and in the wage disbursements. The trends of employment and eamings in the remaining non-manufacturing olasses in the various areas were mixed.

Earrings by Cities. - The total payrolls disbursed at Apr. 1 by the firms co-operating In the oight leading cities for which statistics are tabulated were highor than at Mar. I. In seven of these, the per capita figures were also greater, Quebec being the exception. As in the provinces, the general trends in manufacturing were upwerd, while there was variation in the movements in other industrial divisions within the cities.

Table 9 gives statistic of omployment and earnings for leading industries in the eight cities whose returns are segregated oxch month.

Index Numbers of Averafe Hourl: Eamings in Establishments
Manufacturine Heav: Electrical Nechinery.

At the request of manafacturers of heary electrical apparatus and following their undertaking to provide the necessary data, the Dominion Burear of Statistics is preparing a current. indey. of average hourly eamines of the employees of seven establishments producing such machinery. The index numbers, which are based upon the holirly earnings paid at June $l$, 1941. for services rendered in the last week in May as 100, are as follows in the period of observation:-

| Anr. 1 | 97.5 | Aur. 1 | 106.5 | Dec. 1 | 118.5 | Anr. 1 | 126.0 |
| :--- | ---: | ---: | ---: | :--- | :--- | :--- | :--- |
| Moy 1 | 99.8 | Sept.1 | 109.5 | Jsn. 1 | $116 . ?$ |  |  |
| June 1 | 100.0 | Oct. 1 | 110.4 | Feb. 1 | 125.0 |  |  |
| July 1 | 102.3 | Nov. 1 | 115.4 | Mar. 1 | 128.0 |  |  |

## EMPLOMIENT BY ECONOMIC APEAS.

Industrial activity increased in five provinces at Apr. 1 , the trend being upward in Nova Scotia, Cntario, Nianitoba, Saskatchewan and British Columbia. The largest gains were in British Columbin. In Prince Edward Island, New Brunswick, Quebec and Alberta, however, the tondency was downard. The ceneral levol of employment was hi wher than in any other spring for which data are on record.

Maritime Provinces - There was a seasonal decrease in the Maritime Provinces as a unit. A falling-off was indicated in Prince Edward Island and New Brunswick, while improvement was noted in Nova Scotie. The 936 co-operating employers reduced their payrolls from 119,245 persons at hiar. 1, to 116,439 at the beginning of April. Logging showed a decided seasonal contraction, over 3,000 men beinc relsased from bush work; transportation and railway construction and maintenance also showed curtailment. On the other hand, manufacturing reported substantial gains, mainly in the animal food, lumber, pulp and paper, chemical and iron and steel divisions. lifinine, building and highway construction and maintenance, and retail trade also showed advances. Mmployment generally wes decidedly brisker than at the beginning of April, 1941, when an advance had boen noted; statements for Apr. 1 of last year were received from 886 firms employing 101,415 workers, 558 more than at Mar. 1, 1941.

Quebec. - Manufacturing, communications, transportation, services and trade recorded heightened activity in Guebec; the unusually large gains in manufacturing extended to many industrial divisions, heing most pronounced in the iron and steel, chemical and textile groups. Tobacco plants, however, were slacker. There were large sensonal losses in logging, and constraction also roleased omployees. The eeneral tendency in Quebec was downard, according to data tabulated from 3,282 establishments with 516,086 employees, as acairst 521,247 at Nar. 1. The index, at 176.8 at Apr. 1, 1942, was many points higher than at the same date or last year, when increased activity had been indicated. The trend has been retrogressive in eighteen of the twenty-one preceding Aprils for which information is available; the decline at the latest date was therefore seasonal in character.

At Apr. 1, 1941, statistics had been fumished by 3,117 employers, whose payrolls had included 413,456 men and women.

Ontario.- 5mployment showed a further moderate advance in antario, where 5,624 firms had enlarged their forces by 1,516 workers since the preceding report, bringing them to 709,567 at Apr. 1. A gain had also been registered by the 5,399 establishments making returas for the same date in 1941; their staffs had aggregated 615,118. The index of employment then stood at 152.0 , compared with 174.8 at the latest date. The experience since 1920 shows that activity customarily declines in Ontario at the beginning of April, there having been curtailment of operations in seventeen of the twenty-one previous years for which data are available; the adwance at the date under review was therefore contra-seasonal.

Manufacturing reported heightened activity as compared with the preceding month, the most marked improvenent being in iron and steel plants. The trend was also favourable in
the lumber, chemical, textile, electrical apparatus, non-ferrous matal end other divisions. on the other hand, food, printing and publishinf, rubber and tobaoco factories were slacker. In the non-manfacturing industries, mining, commuications, transportation, ratlway construction ard maintenance and retail trade showed some expansion. Logeing, however, released a large number of men as the season's operations drew to a close, and building and hizhway construction were also quieter.

Prairie Provinces.- Rmployment in the Prairie Provinces as a whelo advanced moderately at Apr. 1; the gain was contra-seasonal. The Prairis index, at 127.2 at the lntest date, was $10 \frac{1}{2}$ points above that at Apr. 1, 1941, previously the maximum for April. Firms in Manitobs Rnd Saskatchewan reported improvement at the beginning of April of the present yoar, while a fallingoff was shown in Alberta. An analysis of the returns by industry shows that most of the increase in the Prairie Provinces as a whole was in construction and manufacturing. Smaller çains were indicated in transportation and services, while locging and coal-mining were slacker. The working forces of the 1,817 co-operating employers actregated 172,158 persons, compared with 170,637 at Mar. 1.

The establishments fumishing information on employment at the same date of last yoar had number 1,789 , with personnel of 157,538 .

British Columbia.- Further expansion of a seasonal character was indicated in British Colimbia, according to returns tabulatod by the Buroau from 1,377 firms with 138,560 employees, or 5,983 more than in their last report. The increase exceeded the average at Apr. I in previous years of the record, but was smaller than that gain reported at the same date of last spring. The indicated volume of employment was greater than at Apr. 1 of 1941, or of any other year of the reccrd. There was a large advance at the date under roview in manufacturing; this took place mainly in the iron and steel division, but lumber mills were also busier. logeing, construction and trado also afforded more employment.

At the beginning of April of last year, the 1,305 co-operating establishments had reported 117,898 employees.

Tables 1 and 5 give index numbers by economic areas.

## EMPLOYMENT BY CITIES.

Industrial activity increased in each of the eight centres for which employment data are segregated, viz., Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver. The largest proportionate gaine were in Quebec City and Vancouver, while those in Ottawe and Winnipeg wore nominal. Pmployment in each of these cities reached a now all-time aigh at the beginning of April.

Montreal.- There was a further upward movement in Montreal, according to 1,903 flrms who reported 243,290 persons on their payrolls, as compared with 237,964 at Mar. I. This increase, which was seasomal in character, was ahove the average for Apr. I in earlier years of the resord, although it was exceeded by the gain indicated at the same date in 1937 and in 1941. Manufacturing generally showed marked improvement at Apr. 1, 1942, from the preceding month; textile and 1 ron and steel plants reported the greatest expansion. Transportation, services and trade also afforded rather more employment, while construction was quieter. Tive 1,807 establishments from which returns were received for Apr. 1, 1941, had reported 200,5013 omployoes, compared with 194,723 in the preceding month; the index then was some 26 points lower than that of 160.3 at the beginning of April, 1942, when a now maximum was ostablishod.

Quebsc.- Manufacturing, services and trade showed hoightened activity in Quebec Clty, the advan in manufacturing being outstandingly large. There was an increase of 1,182 persons in the working forces of the 225 employers making returns, who had 29,034 on their payrolls at Apr. 1. A smaller gain had been indicated by the 216 firms co-operating at the beginning of Ap:il in 1941, whose staffe agEregated 20,839; the index was then decidodly lower than that 207.8 at the latest date.

# EMPLOYMENT BY ECONOMIC AREAS 

1937-1942
(1900

Toronto.- Toronto firms reported considerable improvement over the preceding month. Expension in activity is usually indicated at the beginning of April; the latest increase, however, was above normal for the time of year. Most of the betterment took place in manufocturing, but smaller gains were made in services, trado and transportation. Within the manufacturing division, there were pronounced increases in iron and steel and miscollanews manufacturing flents, with snaller advances in electrical apparatus, non-ferrous metals and textiles. On the other hand, the food, nrinting and publishing and paper products and some other classes were slacker. The working forces of the 1,966 employers furnishing statistics totalled 224,651 persons, compared with ini $^{2}, 458$ at Mar. 1. Employment in Toronto in recent months has rerched successive naw all-time highs; the latest index was 174.8 , compered with 172.3 at Mar. l. At the first of April, 1941, the figure had been 145.4. Data were then recelved from 1,870 firms, whose starrs Det included 136,668 men and women.

Ottawa. - Little general change was Indicated in Ottawa; there wore moderate gains in manufacturing, particularly of iron and steel products, and in trade, but construction was rather quieter. An aggregate staff or 20,635 workers was employed by the 249 ostablishments whose statistiss were tahulated, and who had 20,609 in their last report. The index, at 156.6 was much highe: than that of 142.3 at the same dato of last yeer, when an increase had also been recorded. Stazements had then been compled from 237 firms with 18,709 workers.

Hamilton- Manufacturing showed further expansion, particularly in the iron and steel division. Trade also afforded more employment. In construction, however, the trend was downard. Returns were tabulated from 344 emplorers with 59,272 persons on their paylists, or 296 more than at War. 1. The level of employment roached a new maximum, the index rising fron 180.6 at Mar. 1, 194?, to 181.5 at the date under review. A greater gain had been indicated by the 334 ostaklishmants furnishing returns for Apr. 1, 1941; their payrolls had included 49,343 men and women.

Windsor.- The movement in Windsor continued decidedly favourable, according to data received from 504 firms employing 36,264 workers, as against 35,507 at the beginnirg of Merch. Manuracturing was more active, especially in the iron and steol division, and trade showed some improvement. Imployment generally was in greater volume than in any other month of the record. The 197 concemis reporting for Apr. 1, 1941, had provided work for 30,391 persons.

Winipeg.- Industrial activity showed little general chance in Winnipeg, the staffs of the 560 estiblishments fumishinc statistics ageregating 53,122, as compared with 53,107 in the precediag month. Manufacturing was brisker, particularly in the iron and steel division, and services showed a small gain. The other non-manuracturing classes, however, were rather slacker. An upward movement had been noted at Apr. 1, 1941, when information had been received from 549 employers with a personnel of 47,868; the index was then decidedly lower, standing at 114.8 , as compared with 127.4 at the same date under review. The latter figure is the highest for April in the period of observation.

Vansouver - Improvement was recorded in Vancouver, according to 602 firms with a starf of 62,943 , as compared with 60,330 in the preceding month. Many industrial divisions whowed expansion, that in manuracturing boing most pronounced; the greatest gains were made in $\therefore$ iron and steel plants. Construction and trade also renorted considerably heightened activity. A larger increase had beon indicated at the beginning or April of last year, but emplayment In that city was then at a lower level. The index stood at 177.9 at the latest date, compared with 139.9 at Apr. 1, 1941, when the 576 co-operating establishments had reported 47,570 men and women on their paylists.

Index numbers by cities are given in Tables 2 and 6.

## EMPLOYNENT BY IIDUSTRIES.

Manufacturing - Employment in manuracturing continued to exnand. The eains were seasonal in character, but were on a scale considerably above the average in the experience of the years since 1920; the number of persons added to the reported working forces has only once been excesded in the twenty-one earlier years of the record. The Dominion Bureau of Statistics tabulated returns from 7,250 estabilshments which employed $1,038,501$ operatives at
the latest date, as compared with 1,019,283 at the beginning of Narch. The Apr. I index $(1926=100)$, stood at.199.4, as compared with the previous high of 195.7 at Mar. 1, 1942., and 158.2 at Apr. 1, 1941.

Since the advance at the date under review was aheve averace, the seasonally adjusted index showed a further increase, rising from 199.9 at Mar. 1, 1942, to 201.1 at the latest date. These two ficures are the hiehest so far recorded.

The greatest additions to the personnel at the dato under review were agair reported in iron and steel products, which employed some 11,900 more workers than at Mar. 1 ; the increases in shipbuilding, aircraft and firearm manufacturing were particularly large. There were also important eains in lumber, woollen, garment, chemical, non-ferrous metal, miscellaneous manufactured products, electrical apparatus and machinery and other divisions. On the other hand, tobacoo, vegetable food, printing and publishinf and rubher plants wers slacker. In some cases, the losses were seasonel.

The following are the unadjusted index numbers in menufasturing at Apr. 1 in recent years, based on the 1926 average as 100 :- 1942, 199.4; 1941, 158.2; 1940, 123.4; 1939, 107.1; 1938, 110.8; 1937, 110.8 and 1936, 101.1.

The 6,866 manufacturers furnishing statistics for Apr. 1, 1941, had omployed 821,669 workers, a substantial increase in comparison with their staffs in the preceding month.

Logeing. - Continued and larger losses of a seasonal nature were noted in logging camps, 478 of which reduced their personnel from 76,631 men at Mar. 1, to 61,931 at the date under review; the percentage decline was rather below average, according to the experience of preceding years of the record. The most extensive curtailment at the beginning of April was in Quebec, but the movement was also downward in Ontario and the Maritime and Prairie Provinces. In British Columbia, on the other hand, considerable improvement was noted. The seasonal contractions reported at the same date of last year had involved the release of a smaller number of workers, but the index then stood at 166.2 , many points below the Apr. 1. 1942, figure of 208.7.

Mining - Coal-mining showed a decrease on the whole; there was no general change in the metallc division, while a moderate gain was indicated in quarrying and in the extraction of other non-metallic minerals. Four hundred and twenty-four mine operators reported 81,762 omployees, compered with 82,447 at the beginning of March. The level of employment in this group approximated that indicated at the same date in 1941, but was higher than at Apr. 1 in any preceding year for which statistics are available.

Communications. - Information was received from 6l commanications companies and branches employing 27,189 workers, or 428 more than in the preceding month. Telephones and telegraphs both reported increased activity. The index number stood at 101.8 at the latest date, or 8.4 points higher than at Apr. 1, 1941, when the trond had also been favourable.

Transportation. - Employment in transportation advanoed at the beginning of April, when the shipping, steam railway and street railway, cartage and storage divisions showed improvement. The working forces of the 557 co-operating employers aggregated 124,721 persons, compared with 122,836 in the preceding month. A larger increase, on the whole, had been noted at the beginning of April of last year, but the index was then nearly five points lower than the latest figure of 99.0 .

The construction and maintenance industries reported a further seasonal decline at Apr. 1, there being curtailment in the building, highway and railway branches. Statistics were tabulated from 1,459 contractors with 123,204 omployees, or 7,165 fower than in their last return. An upward movement hed been indicated at the beginning of April of 1941, when the index of employment in construction was slightly higher than that of 98.0 at Apr. $1,1942$.

Services. - Employment in hotels and restaurants showed continued activity, and laundrios and dry-cloaning ostablishments wore also busier. The 614 firms co-operating in the service division reported 38,491 employees, compared with 37,673 at Mar. 1. The trend had also been favourable at the bogiming of April, 1941, when the index was some 14 points lawer.

Trade. - There was a moderate increase in the aggregate forces of the 2,194 cooperating wholesale and retall establishments, which employed 157,011 workers at Apr. 1 . as compared with 155,757 at the beginning of March. The advance which was seasonal in character, approximated the average for the time of year. The index, at 153.0, was rather higher than that of 149.1 at Apr. 1, 1941, when greater improvement had beon noted.

Finance.- At the beginning of April, 762 financial institutions reported staffs agEregating 63.451 persons, compared with the 63,363 in the preceding month; the index number was 122.9 , s compared with 122.7 at Mar. 1, and 115.7 at Apr. 1, 1941. The addition of these figures to the retums furnished in the manufacturing, logging, mining, transportation, communications, construction, services and trade industries brings the total number of employees included in the latest survey of omployment to $1,716,261$ in 13,799 establishments, and lowers the index of 165.2 in the industries above enumerated, to 163.1; when the number employed by the co-operating financial institutions was added to the general figures for Mar. 1 , the index was lowered from 165.1 to 163.0. The comparable figure for Apr. 1, 1941, was 140.1, that in the eight industries above enumerated having been 141.3.

Tatles 3 and 4 give index numbers by industries.
