| :--- |
| In Chargo Employment and Payroll Statistics $\quad$ M. Cudnore, M.A. (Oxon.) F.S.S. F.R.S.C. |

Notes- In addition to the statistios of the present bulletin, other available date respeoting the ourrent labour situation are published in the Monthly Labour Gazotte, the official journal of the Departanent of Labour. These oomprise information regarding the operations of the Unemployment Incuranoe Comission, including statistios of the Employment Service, and statements showing unemployment as reported by trade unions.

GENERAL SUMMARY.

## EMPLONNENI.

Industrial aotivity continued to expand at the becinning of Ootober, but, as at Sopt. i, the increase in the number in reoorded employment was deoidedly gnaller than at the same date in any recontly-proceding year. It was also rather below-normal in the experience of the period sinoe 1920. A corabined working force of $1,885,27 T^{m}$ persons was employod by the 14,026 establishmente furni shing returas to the Dominion Bureau of Statistios, whose staffs at Sopt. I had aggrogated $1,871,315$.

Based on the 1926 average as 100, the unadjusted index number of employment rose from 186.2 at Sept. 1, to 187.6 at the beginning of October, when it was 3.5 p.e. higher than at the same date of last year. The latest flgure is slightly higher than in any other month for which statistios are on record. Since the gain at the date under review was not equal to that usually indioated at the beginning of Ootober, the seasonaily-adjusted index showed a dooline, falling from 179.0 at Sopt. 1 , to 178.5 at the beginning of Ootober.

The general incroase in industrial employment at the beginning of Ootobor, 1943, was fairly ovenly divided between the manufacturing and the non-manufacturing classes. The gain of 7,611 , or $0.6 \mathrm{p} \cdot 0$. , in the former was slightly above the average at 0 ot. 1 in oarlier years of the rooords within this group, there were oonsiderable advances in vegetable food, rubber, fron and steel, non-forrous metal and olectrical apparatus plents. On the other hand, curtailment was indioated in lumber, pulp and paper, animal food, ohemical. electrio light and power, and some
*Sox Distribution of the Persons in Recorded Employment at Oct. 1, 1943.
Of the total number in rocorded employment in the eight loading industries at the beginning of Oatober, 477,757 , or 253 per thousand, were females, and $1,407,520$, or 747 per thousand, were malos. The former proporti on showed a considerable gain as oompared with that of 227 females per thousand employees reported at Oot. 1,1942 . In the 12 months, there was an inorease of rather more than 15 p.c. In the number of women workers, while the muber of males remained practically stationary; the general rise in the number in rocordod employment, as stated above, was $3 \frac{1}{2}$ p.o. Including those omployed in finanoial institutions, the number of females in recorded employment at Oct. 1 was 510,715 , or 262 per thousand, as oompared with 235 per thousand at the same date in 1942. A supplement to the prosent bulletin on employment and payrolls will shortly be issued, dealing in some detall with the sex distribution of the persons omployed by the co-operating firms at Oot. 1,1943 , with comparisons from 0ot. 1,1942 , and earlior dates.

Chort $/$

other divisions.
Among the nommanufacturing industries, logging showed moderate seasonal improvement, on a soale below that usually indioated at the beginning of Ootober. Considerable increases were recorded in trade and servicos. Transportation roported little general change, while the trend was downward in building, mining and communications.

Payrolls.- The salaries and wages disbursed by the co-operating employers at Oot. l aggregated $\$ 59,343,323$, as compared with $\$ 58,573,431$ at Sept. 1. The increase was 1.3 p.0. The average weokly oarnings por employee showed a further gain, rising from $\$ 31.30$ at the berinning of September, to $\$ 31.48$ at the date under review, as compared with $\$ 29.51$ at Oot. 1,1942 . In the year, the inorease of $3 \frac{1}{2}$ p.o. in employment has been aocompanied by that of 9.2 p.o. in the reported payrolls, wile the per oapita average has risen by 6.7 p.c. The gain in the latter is partioularly interesting in $\begin{aligned} & \text { iow of the fact already stated, that the general rise in recorded employment in }\end{aligned}$ the 12 months has taken place wholly among women workers. The average per employee at Oct. 1, 1941, had been $\$ 26.37$; information in regard to the sex of the workers at that date is not available.

Part of the inorease in the average earaings from Sept. I to Oot. I, (which, incidentally, is smaller than that noted in the same oomparison in either 1942 or 1941), was due to the payment of wages and cost-of-living allowanoes at higher rates to employees in cortain categories notably in the heary manufacturing industries.

If the statistios for the finance group be added to those given above for the el ght loading industries, the latest survey shows a total of $1,950,131$ persons in recorded employment at the beginning of Ootobor, as compared with $1,935,820$ at the beginning of September. The latest weakly aggregate payroll was $\$ 61,375,007$, exceeding by 1.3 p.0. that or $\$ 60,582,681$ reported at Sopt. 1. The per oapita average in the nine leading industries advanced from $\$ 31.30$ at that date, to $\$ 31.47$ at Oct. 1, as comparod with $\$ 29.55$ at Oct. 1,1942 , and $\$ 26.46$ at Oct. 1,1941 .

The table on page 6 sumarizes the latest statistios of employment and payrolls for the leading industrial groups, the provinces and economic areas, and the eight leading industrial oities, and gives oomparisons as at Sept. 1, 1943, and Oot. 1, 1942. On page 8 appears a monthly reoord for the of ght leading industries as a whole, and for manufacturing, showing the movements of omployment and payrolls in the period for which the latter statistios are available.

The index numbers of payrolls are besed on the amounts disbursed by the co-operating Pimas at June 1,1941 , as 100. To facilitate omparisons of the trends of employment and payrolls, the indexes of employment have been oonverted from their original base, $1926=100$, to June 1, 1941, as 100. The table on page 8 indicates that in the period for which data are avallable, the number of persons in reaorded employment in the eight leading industrial groups has shown an inorease of 22.7 p.c., while the aggregate woekly payrolls of those workers are higher by 50.7 p.c. Including finance, the gain in employment from June 1, 1941 to 0ct. 1 , 1943, amounted to 22 p.0., and that in payrolls, to 49.3 p.c. The explanation given in prooding bulletins for the much greater rise in the salaries and wajes than in the numbers omployed may agein be stated:- (1) the growing concentration of workers in the heavy manufacturing industries, where rates of pay are above the averace and, in addition, there is a considerable amount of overtime work, (2) the payment of a cost-of-living bonus to the majority of workers; the rates at which thi allowance has been oaloulated have been increased on more than one oooasion since its institution, and (3) the progressive up-grading of employees as they gain experienoe in their work. In certain oases, higher wagemertes have also been granted.

As a result of wartime conditions, there have been espeoially important gains in employment and payrolls in factories, in which the rate of expansion in the period of observation has been deoidedly greater than in the non-menufacturing indurtries; the index of employment in the fozmer has rison by 37.7 p.c. from June 1, 1941, to Oct. 1, 1943, and that of payrolls hes advanced by 71.8 p.ce, proportions decidedly exceeding those elsewhere given for the oight leading industries. The factors stated above as influenoing the general trends have had an even greater effect in the case of mamfacturing.

The production of durable goodsl/ has shown particularly importent gains from the beginaing of the record of payrolls, thus the index of employment has risen by 60.3 p.ce, while the salaries and wages distributed by the co-operating employers have advanced by 104.2 p.c. from June 1, 1941, to Oot. 1, 1943. Although there has more recently been a slackening in oortain of the non-durable goods industries, the index number of omployment in this group at
1/ For list of these industries, see footnote to the table on page 6.

# EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS IN INDUSTRIES OTHER THAN AGRICUITURE 

The curve is based upon the number of employees at work at the first day of the month as indicated by the firms reporting in comparison with the average employment they afforded during the calendar year 1926 as 100 . Curves are plotted for 1929, the year of maximum industrial activity, for 1933, when employment was at its minimum in the record since 1920, and for the years since 1934
the date under review was higher by 17 p.0. than at June 1, 1941, since when there has been ar inorease of $37.5 \mathrm{p.c}$. in the payrolls disbursed by the oo-operating establishments.

In regard to the marked variations in the sverage earnings of workers in the different industrial clesses, (shown in Tables 7, 8 and 9), it must again be pointed out that the sex distribution of suoh persons is an important factor, frequently associated with mariatione in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experienoe. The matter of short-time or overmtime may also oonsiderably influence the reported aggregatesand averages, whioh likewise refleot variations in the extent to which casual labour is used; the degree of skill generally requirod of workers in the industry is of course also an extremely important factor.

TABLES.
The latest statistios of employment and payrolls are sumarized in the tablo on page 6, while Tables 1 to 6 at the ond of this report contain a fairly lengthy record of index numbers of employment for the various provinoes or eoonomic areas, the leading oities and industries, the indexes being based upon the 1926 average as 100. In Tables 7 to 9 are given the latest data of mployment and payrolls, together with index numbers as at Sept. 1 and Oot. 1, 1943, and Oct. 1, 1942. In these latter tables, the index numbers of employment, calculated on their original bese 1926=100, have been converted to June 1, 1941, for comparison with the figures of payrolls. For all general purposes, apart from corparison with the lattor statistics, however, the index numbers of eraployment in Tables 1 to 6 should be used.

## EYPLOMENT AND PAYROLLS BY INDUSTRIES.

## 1. Manufacturing.

Employment.- The trend of employment and payrolls continued seasonally upward in manuracturing at Oct. In the advance in omployment was considerably smaller than at Oct. I in any of the firest four years of the war, but was slightly above the average at that date in the period from 1920. The distribution of the gains continued to differ from the normal, those in the durable goods group being greater than ususl, while employment in the production of non-durable goods showed an inorease wich was below-average.

The 7,855 oo-operating manufacturing establishments omployed 870,905 men, and 557, 251 women at lot. 1, total of $1,208,156$ workers in their preceding report they had indicated a pereomel of $1,200,545$. There was accordingly a gain of 7,611 persons, or 0.6 p.e., in the number in recorded conploymert in manufacturing, whioh reached a now all-time high at the date under revier. The proportion of females, at 279 per thousand, was decidedly greater than that of 257 per thousund indicated at the beginning of Ootober of 1942.

The weokly payrolls disbursed at the berinaing of October amounted to $\$ 39,087,128$, or 1.7 peo. wore than the sum of $\$ 38,450,889$ reported by the seme firms at Sept. 1. The per oapita arerage ahowed further gain, rising from $\$ 52.03$ in the last report, to $\$ 32.35$ at the date under review, as aompared with $\$ 30.15$ at 0ot. 1 , 1942. The continued concentration of workers in the more highly paid heary industries is partly responsible for the noteworthy increase in the payrolls reported at the beginning of October; the payment of wages and cost-of-living allowanoes at higher ratea by a number of firms in this category also contributed matorially to the general gain in menufacturing.

The largest aditions to the working forces were in the regetable food and iron and steel divisienspartly due to a late socson, the expansion in the former was rather above the average at cot. 1, but approximated that indicated at the same date in 1942. Increases on a much analler seale were reported in rubber, tobacco, beverage, non-ferrous metal and electrical apparatus plants. On the other hand, the trend of exployment was downward in animal food, leather, lumber, pulp and paper, textile, ohemical, clay, glass and stone and misoellanoous non-metallio ninerel products.

Based on the 1926 average as 100 , the index of employment in manufacturing at the begiming of Ootober stood at 231.3; this figure was the highestin the record, exceeding by dx p.e. the Oot. 1, 1942, index of 218.3. Sinoe the inorease from the preoeding month alightly exoeeded the average, the seasonally-adjusted index showed further small advanoe, being 224.2 at Oct. $I_{\text {, }}$ E compared with 223.5 at Sept. 1.

Payrolis.- The co-operating manufacturers reported the disbursement of $\$ 39,087,128$ in wookly payrolis at Dot. 1. Thia wes an inorease of $\$ 636,239$ over the weekly salaries and

Number of Persona Employed at October 1, 1943, by the Co-operating Establiahments and Aggregate and Per Capita heekiy Earnings of such Employees, Together With Index Numbers of Employment and Payrolls es at October I and September 1, 1943, and October 1, 1942, Based on June 1, 1941 as 100 p.c.
(The latest figures are subject to revision.)

 stone producte. The non-durable group includas the remaining manufucturing industries, as listad in fablee 4 and 7 , ath the arcoption of alectric light and power,
wages paic on or about Sert. 1. The per capita averace, at \$32.35, was the highest in the record going baok to June 1, 1941. At Oct. 1, 1942, the average had been $\$ 30.15$, while at the same date in 1941, it was $\$ 26.20$.

Based on the weokly salaries and wages paid by the co-operating estehlichments on or about June 1, 1941, as 100 pece , the index of payrolls at oct. 1, 1943, stood at 171.8 , as ompared with 169.0 at Sept. 1,1943 , and 152.5 at Oct. 1, 1942. The increase of 12.7 p.e. In the reported payrolls at the date under review as compared with twelve months earlier, considerably exceeds that of six p.c. in the number of persons employed by the co-operating manufacturers. The reasons for this disparity in the rates of gain have already been given. In the manufacturing industries, the upgrading or employees as they acquire experience is of particular and growing importance, tending to offset the effect of the large-scale dilution of labour consequent upon the shortage of workers which has becone increasingly acute with the development of the war effort. As was pointed out in prooeding bulletins, the changing industrial distribution of the wageearners in recorded employment has also contrinuted naterially to the relatively greater gain in payrolls, there being a growing proportion of workers in the more highly-paid heavy industries. At Oct. 1, 1943, Euch industries provided work for 57.5 poc . of all those ongaged in manuraoturing, exclusive of electric light and power, while at June 1, 1941, the proportion was 49.7 p.0. The offect of this change in distribution is omphasizod by the fact that the latest per oapita average earnings of persons ongaged in these olasses stood at $\$ 35.66$, an amount which was higher by $\$ 7.87$ than at June 1, 1941, while in the light manufacturing industrios the Oct. l average, standing at $\$ 27.72$, has risen by only $\$ 4.4 .2$ in the 28 months.

During the period for which statistics of payrolls are available, there have been especially important increases in the salaries and waces reported in the non-ferrous metal, chemicol, iron and steol, miscellaneous manufactured producta, electrical apparatus and equipment and tobacco industries. These cains have been assooiated with important though relatively smaller advances in employment. In practicnlly every case, the per capita avorace weekly oarning. in the various branches of manufacturing are higher than they were at the boginning of October, 1942.

In making corparisons of the per capita averactes in the various industries, as shown in Tables 7, 8 and 9, it shoulc be recalled thet many factors contribute to the differenoes that exist. Prordnent among, these is the sex dietrilutionl/ of workers in the various industries: associated with the sex distribution is that of are, the vomen workers in general tending to belong in the younger are froups, where earnince are usually lower than amone the more experienced employees. Another important factor is the presence or absence of overtime work.

Lopeinf.- Employment in lopgine showed a seasonal increase which was docidedly below normal for the seascn. The 505 co-cperatine employers reportcd 43,690 workers; thits was 4,934 , or 12.7 p.ce, more than at Bept. 1. Emy cyment gemeraller wes not so active as at the beginning of October in immediately preceding yoars. Althoufh the latest index, at 146.0 , was several points lower than that of 151.7 at , the sume date of last year, thare was an increase of $16.4 \mathrm{p} . \mathrm{c}$. In the index of weokly payrolls during the 12 months. The indiceted earnings at the latest date aggregated $\$ 1,207,552$; this was 10.1 pece higher than the payrolls disilursed at the beginning of Soptember.

The per capite avorame onminfs at the dete under review were $\$ 27.64$, as oompared with $\$ 28.31$ paic on or about Sent. 1. The Oct. 1, 1942, averace had been \$21.26. In considering the figures of afregate and averare earnines in loging, it must be recalled that thay do not include the value of board and lodgin, frequently a part of the remuneration of workers engaged in bush operations. The high lahour turnover in many camps is also an important factor in lowering the reported earnings; these differ greatly in varicus parts of the country, the average in Pritish Columie boing decidedly hi. oher than in any other province. In this comnection, attention is dram to the figures given in Table 8.

Mininc.- The trond in mining continued dovmvard, according to returns from 476 operators whose emplcyoes numbered 72,780 , as compared with 73,918 at Sopt. 1. Rather greater activity was noted in coal-mining, but there was a slight decinge in the production of other normotallic minerals, and a substantial reduction in the metallic ore division. The index of employment in the mining group at oct. 1, at 155.6 , was 5.3 p.0. lower than that of 164.3 at the same date in 1942.

The weekly payrolls reported at the latest date mounted to $\$ 2,643,078$, as compared with $\$ 2,640,792$ indicated at sept. 1. The small advance took place in coal-mining, and to sone extent was duo to the resumption of operations on a more normal scale following industrial di sputes in eastern coal fields. The per oapita average oarnings in mining as a whole rose from 1/ Data showng the relative proportions of male and female workers in recorded employment at oct. 1, 1942 and 1943, will be given in a supplement to the present bulletin.

## Index Numbers of Employment and Payrolls, Faeed on June 1, 1941=100, Together With Por Capita Weokly Earning.

(The latest figuree are subjeut to revision.)

Explazation of the Method Used in Tabulating the Statistios of Payrolls.
Industrial establishments are aked to furnish data showing the aggregate oaraings of their omployees in the lat pay poriods in themonth, the omployoes and their oaralage to be grouped aooording to the duration of their pay periodi. The sume reportod are inolutive of doduotions for fational Dofence Tax and Unemployment Insuranoe contributioni. Cost-of $-11 \nabla 1 \mathrm{ng}$ allowancea are ala included.

The tatoments furnishod show tho mounts oarnod in monthly, somi-monthly, fortaightly and weokly pey periode; oocesionally data for other periode are given. Many firms furnish information for difforont otegorios of omployeos who are peid at onoh of these intervalu, while other habitually use only one or two pay periode in their timekoeping organizationt.

In the Bureau, the tatistios of oaraings reported for the periou periode oxoeoding a week are reduced to the proportions whioh would be oarned in one woek, the numerator of the fraotione ordinarily used for this purpose being eix daye, the standard working weok the denominators of the frootions are the number of day inoluded in the different pay periods, oxaluding only the Sunday*.

In the case of those salaried omployeos whoto oarainge aro oaloulated on an annual or monthly besib, and are consequeatly not affeated by the number of working deys in the period, fixed proportions are used to reduo the orninge to weekly baile, proportions whioh are not pariod with the length of the oalendar month.

The ums resultiyg from these vasious calouletions are then aggegated to give the total mounts whioh would be paid for servioes rendered in one wok by the persons on the payrolls of the ao-operating ostabiliohments. Tho owployeor reportod are not in all one os neoescarily omployed for a poriod of six day by one omployer. is hes previousiy been steted in oonneotion with the figuroe of omployment. the inolusion of
 questionnaires, oonstitutes an clemont of inoomparsbility in the present atatistion of omployment, and those tabulated prior to April. 194 l .
$\$ 35.73$ at Sept. 1 , to $\$ 36.32$ at the date under review, as oompared with $\$ 35.52$ at Oot. $1,1942$. Sinee then, the index of peyrolls has deolined by 3.2 p.e.

Compications.- There was some curtailment in aployment in the comunication group 18 . whole et Dot. 1, when the reportod employees numbered 28,432, compared with 28,684 in the preoeding month. The decrease was slightly larger than usual for the beginning of Ootober. The indioated payrolls were also lower, standing at $\$ 852,118$, as compared with $\$ 860,867$ paid on or about Sopt. 1. The per capita werage fell from $\$ 30.01$ at Sopt. 1 , to $\$ 29.97$ at the first of Ootober. Based on the 1926 average as 100 , the latest index of employment was 106.4 ; this was fractionslly higher than the rigure of 105.9 at 0ot. 1,1942 , since when the index number of peyrolls has risen by four p.c.

Transportation.- Iittle general change took place in transportation as a whole at Oot. Is stoam railway operation and local transportation afforded more employment, but ahipping and stovedoring were quieter. The steffe of the 595 firms and branches furnishing deta totalled 151,588, as compared th 151,927 at Sept. I. The weekly salaries and wages disbursod were given es $\$ 5,338,329$, as compared with $\$ 5,374,471$ paid on or about Sept. 1. The average per omployee fell fral $\$ 35.38$ at that date, to $\$ 35.22$ at the boginning of Ootober; that at Oot. 1 , 1842, had been $\$ 34.35$. In the intervening 12 months, rooorded omployment has risen by 7.4 p.0., while payrolls have advanced by 9.7 p.c.

Construction and Maintenanoe-- There was a seasonal decline of 1,761 persons in thi e division, bringing the reported employees to 172,727 at Oot. l. Highway and railway work were more aotire, but bullding showed a consicerable falling-off. The meokly payrolls reported by the $1,56 \$$ oo-operating employers were lawer by $0.8 \mathrm{p.c.s}$ the latest aggregato was $\$ 5,217.299$. The per oapita average earnings rose from $\$ 30.13$ paid at Sept. 1 , to $\$ 30.21$ the dato under review.

The Dot. 1 index in oonstruction, at 136.9 , wes lower than that of 149.8 at the boginning of Ootober of last yoar, there being a fallingmoff of $8.5 \mathrm{p} \cdot \mathrm{c}$. In this omparinon. However, there wes an inorease of 1.2 p.c. in the reported payrolls in the 12 months.

Services- Employment in the service division showed oontra-seasonal notivity. The 647 eaployer $\overline{\text { From whom date were received indionted a staff of } 44,478 \text {, as compared with } 43,986}$ at Sept. 1. Of the Oct. 1 persomnel, 25,819 were females. The payrolls disbursed at the beginning of Ootober amounted to $\$ 836,626$, compared with $\$ 825,535$ in the preceding period of observation.

The index of employment was higher by 7.2 p.c. than at Oot. 1, 1942, while there was an inorease of 12.5 p.o. in the reported payrolls in the year. The per oapita average earnings, at $\$ 18.81$ at the latest date, were higher by four conts than at Sept. 1 , also exceeding the 0ot. 1, 192, everage of \$17.92. Attention must be dram to the fact that in hotela and restaurants, as in logging, many of those cmployed rooeive board and lodging as part of their remmerations the former division constituted some 64 p .0 . of the total roported in the servico division as a wole at the boginning of October.

Trade- There was considerable seasonal gain in trade at Dot. 1. The improvement wes rather above-averege, according to the experience of the years sinoe 1920. This was partly due to the amploymont of increasingly largo numbers of part-time workers. Information was reoeived fram 2,346 establishments, whose persomel wes increased From 159,021 at Sept. 1, to 163, 426 at the date under review. Of the latter number, 80,238 were females. The sum of $\$ 4,161,193$ was paid at 0ot. I in weokly salaries and wages by the co-operating firms, whose payrolis at Sopt. I had EEgregated $\$ 4,056,201$. The per capita average was $\$ 25.46$ at the latest dato, es compared with $\$ 25.57$ in the preceding report, and $\$ 24.58$ at $00 t .1,1942$.

The index number of employment in trade at Oot. I stood at 156.3 , as compared with 158.5 at the ane date in 1942. The latest figure, therefore, showed an incresse of 1.8 p.0. In this oomparison; the employment of greater numbers of part-time worters was partly responsd ble for the rise. The reported payrolls were higher by 3.4 p.c.

Financial Institutions.- The number of returns received from financial institutions we. 767, ahowlig a personnel of 64,854 , of whom 32,958 were women. At Sept. 1 , these establishe monts had employed 64,505 persons. The weokly oarnings dishursed at the date under roview amounted to $\$ 2,032,684$, as compared with $\$ 2,009,250$ paid on or about Sept. 1. The per oapita wookly average was \$31.34, as compared with \$31.15 in the last report, and \$30.74 at Oct. 1,1942 . In the latter comparison, employment in financial institutions showed an inorease of one p.0.e whil the index number of payrolls was higher by three p.o.

Chort 3

## EMPLOYENT AND PAYROLLS BY BCONOITC AREAS.

Employment inoreased in six of the provinces, Nise, Prince Edinerd Isiand, Yowe Bootia, Quebeo, Ontario, Manitobe and Alberta, whilo the trend wat dowamardin Fow Brumowiok, Se kentahemen and British Columbia. The greatest gaine wore in Move Sootia, Quobeo and Ontarlos of the deolinea in the remaining provinoes, that in British Columbia wis nost promoumoed. Tho mounts dinbaraed in weekly payrolls at Oot. 1 were higher than at Sopt. 1 in all provinoes oxoapt Few Brunawick and British Columbia, while in all oxoopt the latter, the avorage oarnings por ouployou wore aleo greetere The reportod payrolls and weokly averages generally oxoeoded those at 0ot. $1,1242$.

Maritime Provinoes.- Further moderate expansion in industrial mploynont wien whom in the Maritime Provinoes at Oct. 1 , the 988 oo-operating establi mhonts then had ataif of 144,750 persons, as compared with 142,264 at the boginning of Soptomber. The number of fomelec indicatod at Oot. 1 was 21,671. The index of employment stood at 191.0 . 83 ompared with 185.2 at Oot. 1 , 194. There was oonsiderable improvement in Nova Sootis, and a minor gain in Prinoe Bdward Island, bet a falling-off noted in New Brunswiak.

Manufacturing afforded leas omployment in the Yarltime Provinoes at wholes there were advanoes in vegetable food and iron and ateel plants, while animal food, lumber and pulp and paper factorles wers quieter. Logging, trade and oonstruation showed greator aotivity, but deallebe wore noted in mining and transportation, those in the latter being fairly large.

The sum of $\$ 4,159,804$ was disbursed in wookly payrolls at Oot. $I_{3}$ this an inoresse of 2.4 p .0 . from the wage payments of the sam firme at Sopt. 1. The average per omployee rose from $\$ 28.59$ at that date, to $\$ 28.74$ at the latost date, as ompared $w$ th $\$ 25.29$ at Oot. 1 , 1942. In the last twelve months, the index of payrolls in the Maritime Provinoes has risen by 16.5 peoen while that of employment has inereased by 3.1 p.o.

Quebec. - Aotivity in Quebeo advanoed at Oot. 1, when the 3,684 firme furni ohing data roported 597, 546 Gmployees, of whom 153,525 were fomalos. $\Delta t$ the begiming of Soptember, they mad enployed 590,705 persons, so that ther was on inorease of 1.2 p.o. over the monthe This gata rather oxoooded that reoorded at Oct. 1, 1942, although it was amallor than at that date in oither 1940 or 1941.

The sum of $\$ 18,055,552$ was distributed in weokly payrolls at Oot. 1; anmpared with $\$ 17,589,880$ paid on or about Sopt. 1 , this was a rise of 2.6 peo. The per aapita everage at Sopt. 1 had boen $\$ 29.79$, while the latest average wes $\$ 30.22$, as compared $=1$ th $\$ 27.88$ at 0ot. 1, 1942. The index number of employment, at 203.0 , was 4.4 p .0 . higher than at 0ot. 1 of last yoar, an inerease which was acompanied by that of 11.5 p.c. in the reported weekly payrolls.

Most of the general advance in Quoboo at Oot. 1, 1943, took place in manactarinc and loggings within the former, the largest gains wore in iron and steel, olootrioal apparatus, non-ferrous metal and toxtile faotories. Lumber, food and ohomioal works, however, wore quiter. There were also losses in mining, oomunioations, transportation and oonstruction, while miploypent in trade and nervioes showed improvement.

Ontario.- The trend in Ontario oontinued upward, but the number of permona added to the reported staffs at Oot. l was below-averago, boing also smallor than at Oot. 1, 1942. Roturns were reoulved from 5,980 stablishments with a working foroe of 761,052, of whom 588,689 were men, and 222,413 were women. The total number of employees was higher by 4,634 , or 0.6 poo.e, than that reported by the same firms at the boginniag of Soptember. The indioated weokly payrolle were alco higher, howligg an incremse of 0.9 p.0. 1 the total was $\$ 24,600,776$, oompared with $\$ 24,354,710$ at Sopt. 1. The latost per oapita average was $\$ 52.52$, co oompared with $\$ 52.19$ at Sopt. 1 , 1815 , and \& 30.77 at the bogiming of Ootober, 1942. The index of omploymant, at 187.2 at the date under roviow, was slightly above that of 186.1 at Sopt. 1, and 1.4 p.o. higher than the Oot. 1, 1942, Hgure of 184.7. The latest index of earnings wat 5.9 p.0. highor than year ago.

Employment in manufaoturing in Ontario showed oontimed modernte advanoess these wore apeolally large in vegotable food faotories, whioh reportod 5,263 additional workers. There wer sualler gains in rubber, tobsaco and bevorage plants. On the other hand, curtallment was show in a number of olassos, notably lesthor, lumber, pulp and paper, tartilo, ohomical, and oley, glass and stone worles. The reduotions were not partioularly large. In the momemanoturing groups, mining and oonstruotion also showed contrations. iransportations loging and trade, moworer, were brisker.

Prairio Provinoog.- Industrial activity we sightly reduced in Snsktoheman at 0ot. 1. but tho trend was favourablo in manitoba and Albertas the gain in the lettor mas oomaldorsblo, and resultad in an inoreese in the Fratrio Areas as a whelo mioh oxooodod the evarage at Ooto ita the

yoars sinoe 1920. Information for the dato under roview was furnished by 1,867 employers, having $154,441 \mathrm{males}$ and 43,801 fomalos on their ataffs this total of 198,242 was larger by 1,496 than thet indionted at Sopt. 1 , the gain amounting to $0.8 \mathrm{p} \cdot 0$. The weokly salaries and wages disbursed at the beginning of Ootober were also higher, at $\$ 6,066,439$, as oompared with $\$ 5,994,928$ at the beginning of Soptember. The per apita averag earnines showed an inorosse, advanoing from $\$ 30.47$ at Sopt. 1 to $\$ 30.60$ at the date undor review the Oot. 1, 1942, figure had been $\$ 29.50$.

In the last 12 months, industrial omployment in the Prairio Provinoos taken as a unit hes risen by 5.3 p.o., while there has beon a gain of 8.6 p.0. in the reportod weokly payrolls.

There ware soderato advanoes in amployment in the Prairio Aroa at Oot. 1, 1943, in manufacturiag, trazeportation, construction and maintonanoe and trado; the largest gains wore in rotail trade. Within the manufaoturing division, vogetable food, ohemioal and iron and steel plants thowed improvement, while animal roed, lumbor and pulp and paper faotorios were quietor. Thore were also losses in the mining of motallio ores, and in logging and oommuioations.

British Columbia.- For the first tim sinoo Fob. 1 , there wa fallingooff in employment in Briti ah Columbia at the beginning of Ootober, when the 1,535 oo-operating firms reported a working foroo of 185,707 , of whan 36,469 wore femaloss at Sopt. 1 , the samo employore had 185,082 persons on thoir payrolls. The doorease at the latest date, whi oh was soasonal in charater, took place largely in oonatruotion. There were also mall losses in logging, mining, commaiortions and serfloes. On the other hand, trade and transportation were briaker, and improvement wes also chown in manufacturing. Within tho last-rimed, Iumber and rogotable food factorios wore busier, but iron and stool, non-forrous motal and animal food plants reloased omployeos.

The payrolls disbursod by the ostablishments oomoperating at Oot. 1 aggregatod $\$ 6,460,752$, as compared with $\$ 6,567,059$ at Sopt. 1 . The lato at per capita average was $\$ 35,17$, 31 oouts lower than in the procoding report, but $\$ 2.36 \mathrm{highor}$ than tho Oot. 1,1912 , averago of \$32.81. In the interroning monthe, the index of payrolls has risen by $13.2 \mathrm{p} \cdot 0.0$ while that of omploymont, at 187.4 at Oot. 1 , 1943, was 7.5 p.0. higher than at the same date of 1942.

## EMPLONENT AKD PAYROLLS BY CITIES.

Industrial aotivity edvanoed in oix of tho oight oities for whioh atatistios are ourrontly tabulated, there bing inoreases in omplayment and payrolls in Montreal, Quebeo, Toronto, Ottaw, Kinnipeg and Vanocuver. In Hamiltor and Windsor, on the othor hand, the number of omployeos deolined, and there were losses in the waokly marios and wages. In Windsor ard Winnipeg, the per apita average earnings wore also lower, but those in the remining oitios ware higher than at Sopt. 1. In all oases, the averagea wore higher than at Oct. $1,1942$.

Montreal - Continued expansion was reported in Montreal, wher manufacturing was deoidedly more aotive, partioularly in the iron and steel division. Gains on amaller acalo wore indioated in leather, lumber, textilo, olootrical apparatus and non-ferrous metal plants. Trade and serviecs were also rather briker. On the other hand, transportation and oonatruotion rolonsod mployeos.

The 2,155 atablishents oo-aperating at Oot. 1 omployod a staff of 294,600 per soms, of whon 95,110 , or 32.5 p.o. were fomales. At the beginning of September, these firms had roported 291,045 employees. The wookly salarien and wages rooeited by those in reoorded employmont at the date onder review amountid to $\$ 9, \$ 26,926,2.9$ p.o. more thar had boen paid by the same amployor at Sopt. I. Sinoe the poroontage gain in the oarnings oxoooded that of 1.2 p.0. in the - mployees, there was oonsidorable rise in tho por oapita avorago, whioh stood at $\$ 31.65$, as ocmpared with $\$ 31.15$ at the bogiming of Soptombor. Tho Oot. 1,1942 , figure had been $\$ 29.28$.

The latest index of employment, at 192.0 , was 9.1 p.0. above that at the sam date of Iast year, while the payroll index has K sen by 19 p.o. in the 12 monthe.

Quebee City.- Employment again adranosd in Quoboos 245 amployers had a woricing force of 27,558 mon and $13,0 \$ 2$ women at 0 ot. 1 , when the total of 40,591 oxoooded by 672, or 1.7 p.e., the number reported in the preoeding month. The weokly pryrolls rose by 5.6 p.0., the indicuttid diuburnements being \$1,174,842. Tho wookly average stood at \$28.94 at 0ot. 1 . considerably exoeeding the previous maximum figure of $\$ 27.86$ at Sopt. 1 , and that of $\$ 24.83$ paid on or about Oot. 1, 1942; the large inorease at the date under review was mainly due to adjustanente in the rato of pay and oost-of-living allowanoes in the iron and stool division. there were important advanoes in engioymeat in manufnoturing, mainly in iron and stool and
textile works. Trade was also more active, wile littie general change was ahom in the other nonmanufaoturing industries.

The index of employment at the latest date stood at 282.4 , ss oompared W th 248.5 at Oct. 1, 1942. This inorease of 13.6 p .0 . was a00ompanied by that of 31.2 peo. in the reoorded weekly payrolls in the 12 mouth

Toronto - Further improvement was noted in Toronto, the staffs of the 2,109 oow operating 11 ris aggregating 253,275 , or 1,366 more than at Sopt. 1. The gain was below-average for the time of year. Of the total persomel at Dot. $1,152,873$ were males, and 100,402 wore fomalese A falling off in employment was indioated in oonstruotion, but the trend in the remaining industries was generally upward. The largest inareases wore in trade and in manufaoturing, in whioh iron and steel works, in particular, reported extensive gains. There were smaller advanoes in vegetable food, elsctrioal apparatus, non-ferrous metal and misoellaneous manufaoturing, but omployment in leather, lumber, printing and publishing and textile faotories was quieter.

The weokly payrolls distributed by the employers furni shing data amounted to $\$ 8,200,873$, as compared 1 th $\$ 8,100,172$, paid on or about Sept. 1. The index of mployment at the late at date, at 196.7 , was the highest in the reoord, being 5.4 p.o. above that of 186.6 at the same dato of last year. The roported payrolls have risen by 10.4 p.0. in the 12 months. The per apita weekly earnings averaged $\$ 32.58$ at the boginning of Octobor, as compared with an average of $\$ 32.16$ at Sept. 1 , 1943, and $\$ 30.64$ at Oct. 1, 1942.

Ottawa - The trend in Ottawa continued favourables most of the inorease took place in manufaoturing, other industries showing little general ohange. Statistios were received from 258 omployers, with a staff of 22,931 , as compared with 22,672 in the preceding month; of the Oct. 1 total, the female employees constituted $34.6 \mathrm{p}, 0$. pumbering 7,926 . The weekly salarios and wages reported at Oot. 1 aggrogated $\$ 624,098$, a per oapita average of $\$ 27,22$. The Sept. 1 aggregato had been $\$ 611,831$, and the average, $\$ 26.99$. The Oot. 1,1942 , per oapita f1gure was $\$ 26.24$.

The indox of employment in Ottawa, at 173.6 , was seven p.o. higher than that of 162.3 at Oot. 1, 1942, while the index of payrolls showed an increase of 9.8 0.0. in this comparison.

Hamiltone- There was a moderate fallingmoff in Hanilton at Oot. I, coording to statistlos oompled from 364 firms wh a staff of 40,856 men and 18,586 women; this total of 69,442 workers was lower by 664 , or 1.1 F .0, , than that of $60,106 \mathrm{in}$ the preceding month. The weekly payrolls disbursed on or about Dot. 1 smountod to $\$ 1,938,822$. This was a doorease of 0.5 p.c. As compared with the salaries and wages paid by the same employers at the beginning of September. The oapita average earnings advanced, rising from $\$ 32.41$ in the preceding period of observation, to $\$ 32.62$ at the date under review, as oompared with $\$ 32.05$ at Oot. 1. 1842 .

Over the 12 months, the index of employment has fallon by 4.8 p.o., while that of payrolls has declined by $3.2 \mathrm{p}, 0$. The latest index of employment, at 181.9, is the lowest sinoe Apr. 1, 1942, but is hioher than in any earlier month of the reoord.

The trend in manufaoturing was downward at Oct. 1 ; most of the recession took place in iron and steel and clay, glass arid stone plants. Transportation and other non-manufaturing groups reloased some employees, but the oilanges were generally small.

Windsor. A deoline in employment was also indioated in Windsor, were the $22300-$ operating employers roporting a otaff of 40,466 , as compared with 41,036 in their last returng the Det. 1 personnel included 7,121 women. The amount disbursed as weokly oarning: wa $\$ 1,674,143$, oompared with $\$ 1,712,334$ at Sept. 1 ; the falling-off at the latest date wes asoribod in part to the shortages of materials. The per capita average at Dot. 1 was $\$ 41.37$, as compared with that of $\$ 41.73$ paid to the typical individual in reoorded employment at Sept. 1, and $\$ 40.28$ at Oct. 1 . 1942 . The reduction in the personnel at the date under review took plaoe mainly in iron and steel plantse Vegetable food factories, however, showed heightened activity. Little general ohange was noted in the non-manufacturing classes.

The latest index, at 297.2 , was lower by 4.5 p. . than that of 311.2 at the beginning of October, 1942. The index number of payrolls has decreased by 2.2 p.c. over whe twelve months.

Winnipeg - Reversing the trond in evidence in the last report, there was a moderate Ise in omployment in Winnipeg at oot. I. The gain was largely in manufacturing and trade; within the fomner, It took place mainly in factories turning out fegetable food and onemical produots. On the other hand, animal food and printing and publishing plants were slaoker. There wero also rather small losses in transportation and construction. A staff of 39,333 males and 20,383 fomales,
or a total of 59,716 persons, was employed by the 885 firms whose returns were tabulated, and who had reported 58,790 employees at Sept. 1. This inorease of $1.6 \mathrm{p} \cdot \mathrm{c}$. was accompaniod by that of 1.3 p.o. in the weekly payrolls, which aggregeted $\$ 1,665,072$ at oot. 1 . as compared w1 th $11,643,979$ at Sept. 1. The per oapita average foll from $\$ 27.96$ at that date, to $\$ 27.88$ at the beginning of Ootober, se ompared with $\$ 27.57$ at Oct. 1. 1942.

The index number of employment, at 142.1 , reached a new high at the date under review, when it was 4.6 p.e. above the Oot. 1. 1942, figure of 185.8 . The rise in the index of payrolis over the twelve months was E. 4 p.c.

Tancouver.- A anall sdvance we indicated in Vencouver at the bogiming of Ootober - the fifth sucoessive month of expansion. The inorease took place largely in manufacturing, perticularly of lumber and food; building and trade wore also rather busior, but in no case was the gain large. The 652 establl shments furmishing data had a working force of 90,847 , of whom 24,150 wore women. The omployees reportod at Sopt. 1 had numbered 90,612 . The latest index, at 254.0, was 6.5 p.0. higher than that of 238.5 at Oot. 1, 1942. The persons in reoorded employment at the date under reviow were paid the sum of $\$ 3,108,462$ in weekly salaries and wages, as oompared with $\$ 3,095,977$ in the preceding period of observation. The index of payrolls hes risen by 11.3 p.c. Einoe Oct. 1, 1942. The per capita average, at $\$ 34.22$ at the boginning of Ootober, 1943 , oompared favourably with those of $\$ 34.17$ at Sept. 1 . 1943, and \$32.25 at Oct. 1, 1942.

## TABLES.

Tables $1-6$ in the following pages give index numbers of employment for the Dominion 2. Whole, for the provinoes and eoonomio areas, and for the oight leading cities, the indexes being be sed on the 1926 average as 100. Tables $7=9$ show the number of employoes reported at 0ot. 1 by the oo-operating ostabliskments, together with the aggregate weekly payrolls and the por oapite average earnings of such persons, classified by industry, in the Dominion as a whole, in the economic areas and the leading industrial oities. Index numbers of weekiy peyrolls, besed on the emounts disbursed by the oo-operating firms at June 1, 1941, are also given; to provide comparisons of the treads of omployment and payrolls, the index zumbers of omployment have been oonverted for these lattor tablos from thoir original bese, $1926=100$, to June 1,1941 , as 100.
