GXPLANATION OF THE NGTLOD USED IN PREPAR ING THE MONTHLY STATISTICS OP RMPLOYMETT AND PAYROLIS.

The monthly surveys of employment and payrolls extend to all branches of the following industrise: manufacturing, logging, mining, comumications, transportation, construction and maintenance, trade and finance; the establishments for which data are given under the heading "services" are chiefly hotels and restaurants and laundries and dry-cleaning plants. For practical reasons of collection and tabulation, the surveys are in the main limited to firms usually amploying 15 persons and over. Firms reducing their staffs below this minimum are not necessariby removod from the mailing list. Establishments are asked to furnish data for all classes of amployees irrespective of their funotions in the business, but to exclude statistios for the owners. Bmployers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different industries and areas.
1.- COVNRAGE - The virtual limitation of the monthly surveys to establishments having 15 employees or more results in a relatively even representation of employment in the various provinces and in the larger cities for which data are segregated, but also resulte in variatione in the coverage of different industries, depending upon whathor a given industry is ordinarily organised in large or small units of operation. Complate information respecting the distribution of the working population is available only at 10 year intervals, and sometime after the Consus dates; comparisons of the data of the monthly surveys and those obtainod elsewhere in the Bureau are complicated by the fact that the industrial classifioations differ in several important respects. The distribution of the persons employed at Juns 1,1941 , by the co-operating firms in comparison With the distribution of the wage-earners and salaried employess enmerated in the Census of June 1, 1941, was discussed in the 1944 Annual Review of Employment and Payrolls. This showed in the monthly enquiry, an industrial coverage of all employees enumerated in the Census which ranged from over $41 \mathrm{p} . \mathrm{c}$. in the hotel-and-restaurant and laundry-and-dry-cleaning group, and more than 47 p.c. in trade, to over 93 p.c. in manufacturing and nearly $97 \mathrm{p} . \mathrm{c}$. in mining. Differences in the industrial classifications of establishments and individuals contributed to an important extent to these disparities, exaggerating the high covarage in mining and manufacturing, and minimizing that in trade. The present ooverage in the abovementioned service divisions and in trade may be estimated at 48 p.c. and 52 p.c., respectively.

It should be noted that the statistics of persons employed, as published in various tables in the monthly bulletins, do not represent estimates of the total numbers angeged in the specified arass or industrias, but show the distribution of the workers on the staffs of the oo-operating firms at the indicated dates, togetner with the distribution of their weskly payrolls, and the per capita wookly earnings of suoh employess.
2.- THS QUEST IONNAIRE - From 1921 to 1941, the questionnaire used in collecting current data on employment called for a statement of the number of persons at work on the last working day of the month. With the introduotion of the statistics of payrolls in the spring of 1941. it became necessary to ask for information showing the numbers of employess on the payrolls in the last pay periods in the month, to relate to the salaries and wages. The difference in the coverage of employmont as a result of this change was considerabls, especially in industries with high proportions of casual labour. In so far as was possible, adjustment in the records was made in 1941, to preserve the comparability of the data collected prior to the spring of 1941, and those thereafter collected. The inclusion of casual workers to a greater extent than was the case in the earlier surveys novertheless constitutes an slament of incomparability in the present statistica of employment and tnose tabulated prior to the institution of the complementary statistios of payrolls in April, 1941. The questionnaire now used asks omployers to furnish data showing tho gross earnings of their salaried employees and wage-earners in the last pay periods in the month, the employess and their earnings to be grouped acoording to the duration of thoir pay poriods, whether these bo monthly, semi-monthly, fortnightly, weekly, etic. The payrolls reported include amounts deducted for taxes, unemploymont insurance contributions, eto. cost=of $=117 \mathrm{ing}$ allowances, incorporated in the basic wage-rates as from Fob. 15, 1944, are included, as was the case before their incorporation in the basic rates. Commissions and incentive and production bonuses are also included.
3.- THE PROCESSING - In the Bureau, the statistios of salarios and wages raported for any period excesding a wosk are roduced, for tabulation purposes, to the proportions which would be earned in ono wesk in the period, the numerator of the fraction ordinarily used for this purpose
boing six days, the standard working week; the denominators of the fractions are the numbers of working days in the different pay periods, excluding only the Sundays. Fhere operations are continuous, the numerator of the fraction is seven, the denominator being the total number of days in the pay period, including Sundays. In the case of employees paid at annual or monthly rates, so that their earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the longth of the calondar month. The sums resulting from these verious calculations are then aggregated to give the total amounts, whioh, on the average, would be paid for services rendered in one woek by the persons on the payrolls of the co-operating establishunents. The omployeos reportod are not in all cases noossarily employed for a period of a woek by one firm. Bmployers are urged to make a practice of furnishing data only for the last pay period in the month for thoir various classes of omployees rather than to aggregat statistios for soreral pay periods, since the latter mothod tonds to exaggerate the amount of duplication posible in the statistics of employment in cases where individuals may bo omployed by more than one co-operating establiahment in a period of several weeks.
4.-THE TABULATION - The data tabulated monthly show the number of persone drawing pay from the establishments furnishing returns at the given date, and their weekly oarnings, togetner with the numbers of omployees and the payrolls of the same firms in the proceding month, and in the basio periods. The statistics of the first tabulation are preliminary, the retabulation of the statistics on the succeeding month's tabulation incorporating revisions in the returns originally tabulated, as well as reports received too late for inclusion in the preliminary tabulation.
5. - THS INDEX NUMBERS OF EMPLOYMSNT - The index numbers represent the porcentage relationship betwoen the number of persons omployed by the establishments ourrently furnishing data and the number which they had auployed in the basic period. The number of workers employed in the basic period by firms which then operated but have einoe gone out of business aro continued in the basic average figures, whilo firms or branohes opening for business sinoe the basic period are tabulated with zero bese figures. The basic averagos of establishments which operated in the base period but have since been added to the malling list are incorporated in the basic figures from the date when their co-operation was firat obtained.

## 6. - THI INDEX NUNBERS OF PAYROLLS - Shortly after the institution of the

 statiatice of payrolls, it became necessary to present the data in the form of indax numbers. The carliost period which could bo adopted as a base was solected for tho purpose, namely, the weok of June 1, 1941. The ourrent disbursements are thus related to the sums expended in salarias and wages by the co-operating employers on or about June $1,1941,28100$ p.0. To provide measuroment of the chamges in amployment and payrolls from the astablishment of the latter series, the monthly indexes of employment are related to June 1,194 , as 100 , in the tables giving the two sets of data. For all purposes apart fron comparison with the statistics of payrolis, howover, the indexes compiled on the original 1926 base should be uved.7.- THE MBEKIY BARNINGS - The averago weokly earnings represent the division of the aggregate weokly salarias and wages reported by the co-operating establishments, by the number of their employees in the same pay periods; the index numbers of average weukly earnings given in the table on page 4, are basod on the averagea roported in the weok of June 1, 1941, as 100.

Statistios of average hourly and wookly earnings of wage-earners for whom the larger omployers keop rooord of hours worked are contained in tho monthly bulletins on manhours and average hourly earninga, aveilable from the end of 1944.

THE MAY EMPLOYMENTSITUATION,
TOGETHERWITHSTATISTICSOF PAYROLLS
IN THE LAST WEEK IN APRIL, 1948.

Dominion Statistician:
Director, Labour and Prices Division:
Chief, Employment and Payroll Statistics Branch:

## Herbert Marshall

H.F. Greenway

M, E,K. Foughsedge

Note: In addition to the statistics of the present bulletin, other available data respecting the current labour situation are published in the Monthly Labour Gazette, the official journal of the Department of Labour. These comprise information regarding the operations of the Unemployment Insurance Commission, including statistics of the Employment Service, and statements showing unemployment as reported quarterly by trade unions.
GENERAL SUMMARY.

## EMPLOMENT.

On the whole, there was a contraction in the volume of employment afforded by leading establishments in the major industrial divisions at hay 1 , when the loss was the fifth in as many months. Unusually pronounced declines of a sersonal nature were recorded in logging, and there were slight reductions in manufacturing, and also in trade. On the other hand, heightened activity was indicated in mining, transportation, communications, construction and maintenance, hotels and restaurants and laundries and dry-cleaning establishments. The falling-off in trade and manufacturing was contra-seasonal, as was the increase in mining; the direction of the movements in the other main irdustrial groups was in accordance with the usual seasonal pattern at May 1.

The Daminion Bureau of Statistics tabulated monthly data from 18,802 of the larger firms ${ }^{\text {/ }}$ in the eight principal industries, employing a working force of 1,923,171 persons. This number was less by 7,926 than the total they had reported at the beginning of April. Curtailment had been indicated at May 1 in four of the last five years, although in pre-war days an increase in employment was usual at that date. Based on the 1926 average as 100 , the index fell from 186,6 at Apr, l, to 185.8 at the beginning of May; it was then 3.5 poc. above the May 1, 1947, figure of 179.6 , previously the nignest in the recora lor that date. The index numbers at the beginning of May in recently preceding years were as follows:- 1946, 169.3; 1945, 175.5; 1944, 178.2; 1945, 178.2, and 1942, 167.4. (1926=100).

## PAYROLLS

Accompanying the general recession in employment indicated at May las compared with Apr. 1, was a considerable increase in the sums disbursed in weokly salaries and wages by the co-operating establishments. The advance amounted to 1.4 p.c., while the loss in employment was stated as 0.4 p.c. The payrolls reported

[^0]Table - Mumber forsons* Eaployod by the Roporting Establishments and Aggregate and Average Noekly Salaries and Wages at May 1 , 1948 , Together with Index Numbers of Employment and Payrolls, With Comperisone at Apr. 1, 1948, May 1. 1947 and May 1, 1946.

- See explanatory etatement: on pager I and II.
by the leading establishments ${ }^{1 /}$ at the date under review aggregated $\$ 76,418,725^{2 /}$ ，as compared with $\$ 75,393,110$ in the preceding period of observation，when the situation had been affected by the observance of the Easter holidays．The latest total represented an average ${ }^{3}$ of $\$ 39.74$ per person in recorded employment，as compared with \＄39． 04 at Apr．1．The per capita figures at May 1 in earlier years for which statistics are available were as follows：1947，\＄35．89；1946，\＄32．05；1945，\＄32．55； 1944，\＄32．26；1943，\＄30．59，and 1942．\＄28．59。

Based on the June 1，1941，disbursements as 100 p．c．，the index number of payrolls in the eight leading industries at the beginning of May was 187．4，as compared with 184.9 at Apr．1， 1948 ，and 163.7 at May 1 of last year．In the 12 months，there was an increase of 14.5 p．c．in the index of weekly salaries and wages， as compared with a rise of $3.5 \mathrm{p}, \mathrm{c}$ ．in the index number of employment．The average weekly earnings showed an advance of 10.7 p．c．

When the figures for financial institutions are included，the lafost survey shows a total of $2,007,218$ persons on the staffs of the larger employers in the nine major industries，whose weekly payrolls at the first of May amounted to $\$ 79,670,806$ ． A month earlier，the same firms had reported $2,014,867$ employees，to whom they had paid $\$ 78,623,394$ in weekly salaries and wages．The per capita figure in the nine major industrial groups，including finance，stood at $\$ 39.69$ at the beginning of May， as compared with $\$ 39.02$ at Apr．1，and $\$ 35.95$ at May 1 a year ago．In the latter comparison，there was a rise of 3.4 p．c．in recorded employment in these industries， accompanied by that of 14.2 poc．in the aggregate weokly payrolls，while the average earnings were higher by 10.4 p．c．

In Table $A$ on page 2 appears a summary of the latest statistics of employment and payrolls for the major industrial divisions，the provinces and economic areas， and the loading industrial cities，with comparisons as at Apr．1，1948，and May 1， 1947．Table B on page 4 contains a monthly record for the eight leading industries as a whole and for manufacturing，showing the movements of employment and payrolls since 1944．The disbursements of the co－operating firms at June 1，1941，are used as the base in calculating the index numbers of payrolls．To provide a comparison of the trends of employment and payrolls，the index numbers of employment have been converted from their original base，1926－100，to June 1，1941，as 100.

The table on page 4 shows that in the period for which information on payrolls is available，the number of persons on the staffs of the larger establish－ ments in the eight major industrial groups has risen by 21.7 p．$c_{0}$ ，their aggregate weokly payrolls by 87.4 p．c．，and the per capita figure，by 57.4 p．c．Including finance，the general increase in employment in the larger industrial establishments from June 1，1941，to May 1，1948，amounted to 22.3 poc．The gain in the weokly salaries and wages in this comparison was 87.3 p．c．，while that in the average weekly earnings amounted to 55.7 poc．As in previous monthly bulletins，the following factors may be mentioned as mainly responsible for the much greater rise in the payrolls than in employment：（1）the payment of higher wage－rates in large numbers of industries and establishments，in addition to the general increase resulting from the mandatory payment of cost－of－living allowances to the majority of workers；the rates at which these bonuses were paid were increased on more than one occasion before they were absorbed in the basic wage－rates as from Feb。15，1944， （2）the progressive up－greding of employees as they gained experience in their work and（3）reductions in the proportions of women workers．
I／See explanatory notes on pages I and II。
2／For estimates of total expenditures in wages，salaries and supplementary labour income，see the bulletins＂Monthly Estimates of Labour Income＂issued by the Dominion Bureau of Statistics．
$3 /$ The attention of those interested in hourly oarnings and weokly wages is drawn to the statistics published in the monthly bulletins on man－hours and average hourly earnings．

| Dec. | 1 |  |  |  |  |  |  |  |  |  |  |  |  |

The general increase in employment in manufacturing at May 1 , 1948, as compared with June 1, 1941, amounted to 20.1 p.c., that in the indicated salaries and wages to 88.5 p.c., while the weekly average earnings rose by 59.4 p.c. The advance in the index of employment in the same comparison in the non-manufacturing industries taken as a whole was $24.1 \mathrm{p} . \mathrm{co}_{0}$, and that in their index of weekly payrolls, 86.1 p.c.

In comparison with May 1, 1947, an increase of three p.c. in the index of employment in manufacturing was shown, accompanied by a rise of 15.9 p.c. in the index of payrolls. The average weekly earnings of the persons employed by the larger factories have mounted by 12.4 poc . in the 12 months. A composite index for the non-manufacturing industries for which data are available shows advances of 4.1 p.c. in the case of employment and 12.9 p.c. in the case of the payrolls.

With regard to the marked variations in the average earnings of workers in the different industrial classes, (shown in Tables 1 to 5 and in Table A), it may again be pointed out that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups and in the working hours. In general, the female workers tend to belong to the younger age classes, in which the earnings are usually lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is employed; the degree of skill generally required of workers in the industry is obviously a factor of paramount importance.

## THE SEX DISTRIBUTION OF THE PERSONS IN RECORDED EMPLOYNENT.

As already stated, the co-operating firms $1 /$ in the eight leading industries employed a staff of $1,923,171$ persons at May 1, of whom $1,511,163$ were men and 412,008 were women. As compared with Apr. 1, the reported number of men showed a decrease of naarly 7,000 , or $0.5 \mathrm{p} . \mathrm{co}_{\text {; }}$ the accompanying loss among women amounted to about 900 , or 0.2 p.c. In the nine leading industries, in which the reporting employers indicated a general decline of 7,649 persons, the number of women was also lowered by 0.2 p.c. at May 1 as compared with a month earlier, while the number of men was reduced by approximately $0.4 \mathrm{p} \cdot \mathrm{c}$. The small disparity in the rates of change among workers of the two sexes resulted largely from seasonal causes, the pronounced curtailment in logging having partichlarly affected men workers.

The ratio of women per 1,000 employees reported by the larger firms in the eight major industrial groups at May 1, as at Apr. 1 , was 214. The corresponding figure at lay 1, 1947, was 218. In the nine leading industries, (enumerated in the tables on pages 2 and 6, stc.), the proportion at May 1 was also unchanged from Apr. 1, standing at 225 , as compared with 228 at May 1 of last year. When the ratio of women was at its highest point at Oct. 1, 1944, the number of women reportod in the eight industries constituted 261 per 1,000 workers, and in the nine major industrial divisions, 271 per 1,000 .

## TABLES。

The latest statistics of employment and payrolls are summarized in Table A on page 2, while Tables 1 to 5 at the end of this bulletin contain the latest data on omployment and payrolls, together with index numbers, as at Apr. 1 and May $l_{\text {, }}$ 1948, and May 1, 1947. In these tables, the index numbers of employment, calculated on their original base, $1926=100$, have been converted to June 1, 1941, for comparison with the figures of earnings for all general purposes, apart from comparison with the payroll statistics, however, the index numbers of employment

See explanatory notes on pages I and II.

[^2]in Tables 6 to 11, based on 1926-100, should be used.
Table C on page 6 sumarizes for the provinces, the cities and the major industrial divisions, the latest statistics of employment, showing the numbers and proportions of male and female workers reported at May l, with comparisons from earlier surveys; in this table, the provincial and city figures given are those for the nine leading industries, including the employees reported in financial institutions, excluded in most cases from the data given in the table on page 2. Table 12 shows the sex distribution in a considerable list of industries in the Dominion as a whole at the date under review, with comparative statistics as at Apr. 1, 1948, and May 1, 1947.

## EMPLOYMENT AND PAYROLLS AS REPORTED BY LEADING FIRUS IN THE MAJOR INDUSTRIAL DIVISIONS.

## 1. Manufacturing.

Employment.- A further slight contraction in employment in manufacturing was shown at the first of May, reducing the index from 202.0 a month earlier to 201.7 at May 1, as compared with 195.8 at the same date in 1947, and 186.2 at May 1, 1946. The latest index was lower than at May 1 in the period, 1942-45, but was otherwise the highest in the record for the time of year. Statistics were furnished by 9,470 leading establishments $1 /$ with staffs aggregating $1,056,338$, as compared with $1,058,355$ at Apr. 1. The falling-off, though slight, was contra-seasonal, the trend in manufacturing at May 1 having been upward in 21 of the 27 preceding years of the record.

Considerable improvement as compared with Apr. l was indicated in animal food and pulp and paper factories, together with smaller increases in the printing and publishing, beverage, chemical, clay, glass and stone, potroleum and míscellaneous manufacturing industries. Central electric stations also afforded more employment. On the other hand, there were large losses in leather, rubber and textile factories; the trend of employment was also downward in lumber, vegetable food, paper products, tobacco, electrical apparatus and iron and steel works. In some cases, the changes were seasonal in character.

Payrolls in Manufacturingo- The amounts disbursed in weekly payrolls at May 1 by the co-operating manufacturers were given as $\$ 43,067,645$; this sum was higher by 2.8 p.c. than their total of $\$ 41,907,310$ reported at Apr. 1 , when the observance of the Easter holidays had affected the earnings. The per capita figure stood at $\$ 40.75$, the highest in the record, as compared with $\$ 39.60$ at Apr。1, 1948, and $\$ 36.27$ at May 1 of last year; at the same date in earlier springs, the per capita figures were as follows: 1946, \$32.24; 1945, \$33.59; 1944, \$32.92; 1943, \$31.09, and 1942, \$29.19. It may also be noted that in 19392/, the earnings of persons employed by the leading manufacturers averaged $\$ 23.11$ per week. The index of payrolls, based on the disbursements at June 1, 1941, as 100, advanced from 183.4 at Apr. 1 to 188.5 at May 1, 1948. This was 15.2 p.c. higher than that of 162.7 at May 1, 1947, since when the index of employment in manufacturing has risen by three p.c.

THP SEX DISTRIBUTION OF WORKERS IN PECORDED EMPLOYMENT IN MANTJPACTURING.
The manufacturers furnishing data at lay 1 showed a further slight decline in the number of women on their paylists, accompanied by a small reduction in the number of men. The losses in the reporting establishments approximated 1,000 women
$\overline{1 / S e s}$ explanatory notes on pages I and II.
2/ Attention is drawn to the bulletin Average Weekly Salaries and Wages of Persons employed in Manufacturing, Mining and Lagging recently issued by the Dominion Bureau of Statistics.

and 500 mon ; the percentage decrease amounted to 0.4 p.c. among workers of the former sex, and to 0.1 p.c. among men. The 234,290 women reported at May 1 constituted 222 per 1,000 workers on the indicated staffs. This ratio (the same as that indicated a month earlier) was lower than in any preceding survey of sex distribution undertaken since 1942 in connection with the current statistics of employment and payrolls. The proportion at May 1, 1947, had been 230 per 1,000 employees, and that at May 1, 1946, 237 per 1,000.

There were considerable increases in employment for men at May 1 as compared with a month earlier in animal food, pulp and paper, beverage, clay and glass and stone and petroleum factories, with reductions in the leather, lumber, textile, tobacco, and iron and steel divisions. The trend of employment for women was downward in leather, lumber, textile, tobacco, electrical apparatus and non-ferrous metal plants. On the other hand, improvement was indicated in the animal food and printing and publishing industries.

The number of women workers in recorded employment has declined in the last 12 months by some 0.7 p.c., but there has been a gain of about four poc. in the number of malo employees in the leading manufacturing establishments.

## 2. The Non-Manufacturing Industries.

Logging. - Following a seas on of marked activity, there was a further sharp contraction in logging operations at May 1; the 672 leading companies $1 /$ furnishing statistics, reported 53,100 workers, a reduction of 29,906 from their staffs at Apr. 1. This loss of $36 \mathrm{p}=\mathrm{c}$. exceeded that noted a year ago, and was also above the average percentage decline in the experience of earlier years. The latest index of employment, at 174.8 , was 27.6 poc. below the May 1 , 1947, figure of 241.3.

The sums disbursed in salaries and wages by the larger logging companies at the date under review amounted to $\$ 2,187,360$, as compered with $\$ 3,398,743$ at Apro. 1 . The decrease was 35.7 p.c. The per capita earnings, however, advanced from $\$ 40.95$ at Apr. 1, to $\$ 41.19$ at the beginning of May; 12 months ago, the figure had been $\$ 35.19$, and that at May 1, 1946, \$27.95. In 1939, the employees of leading logging operators ${ }^{2 /}$ had received a weekly average of $\$ 17.32$. It must again be noted that the current statistics of aggregate and average earnings in logging do not include the value of board and lodging, frequently a part of the remuneration of workers engaged in bush operations. The high labour turnover in many camps also affects the reported earnings, which vary greatly in the different provinces; the average in British Columbia is much higher than elsewhere, (see l'able 2).

The loss of 27.6 p.c. in the May l index of employment as compared with a year ago, was accompanied by a decline of 15.2 p.c. in the index of payrolls in the same comparison.

Mining - Considerable expansion in employment was recorded in mining at May 1 , when the trend in all three major branches of the industry was favourable. Information furmishod by 657 of the larger operators $1 /$ indicated a combined working force of 81,016 persons, as compared with 79,334 at the beginning of April. The index in the mining group stood at $172.4,-2.1$ p.c. above the preceding figure of 168.8 , and 23.6 p.c. higher than that of 139.5 at May 1, 1947, when the situation had been affected by industrinl disputes in the Maritime coal fields. Since then, the index of payrolls has risen by 39.4 p.c. The reporting companies distributed weekly salaries and wages aggregating $\$ 3,989,932$ at May 1 , as compared with \$3, 827,219 in the preceding period of observation. The latest per capita earnings

[^3]
were $\$ 49.25$, as compared with $\$ 48.24$ at Apr。 1,1948 , and $\$ 43.54$ at May 1, 1947. In 1939, the employees of the leading mining companiss $2 /$ had received weekly average earnings of $\$ 28,68$.

Communications - Seasonal improvement was reported in employment in communications at the first of May; statistics were received from 92 of the larger companies $1 /$ employing 46,589 men and women, as compared with 46,167 in the month before. The weekly salaries and wages received by these employees at May 1 totalled $\$ 1,707,315$, as compared with $\$ 1,698,931$ in the week of Apr. 1. Their per capita weekly earnings declined from $\$ 36.80$ at Apr. 1, to $\$ 36.65$ at the first of May, as compared with $\$ 33.76$ at the same date of last year. The latest index of employment, at 172.0 , was 6.6 p.c. above that of 161.4 at May 1,1947 , while the index of aggregate payrolls showed a gain of $14.6 \mathrm{p}, \mathrm{c}$. in the 12 months.

Transportation. - Important expansion as compared with Apr. 1 was indicated in the transportation and storage group at May 1 , the co-operating companies $1 /$ and branches having increased their personnel by 4.3 p.c. The persons on their payrolls numbered 178,768. Steam railway, local transportation and shipping and stevedoring shared in the upward movement, which was especially marked in the water transportation division. The index of employment, at 138.2, was 2.6.p.e. higher than that of 134.7 at May 1, 1947; this rise was accompanied by that of $6.6 \mathrm{p}, \mathrm{c}$ 。 in the index of payrolls. The weekly salaries and wages paid to the persons on the paylists of leading firms in the transportation industries at May 1,1948 , amounted to $\$ 8,079,889$, as compared with $\$ 7,929,183$ at the beginning of April. The latest average earnings were $\$ 45.20$, as compared with $\$ 46.26$ at apr. 1 , and $\$ 43,55$ at May 1, 1947.

Construction and Maintenance. - A recession in employment was shown in railway construction and maintenance, but decidedly greater activity was indicated in building and highway work. Information was fumished by 2,260 leading contractors 1 / and branches, with an aggregate working force of 183,621 persons. As compared with 170,739 at Apr. 1, there was a gain of 7.5 p.c. The reported salaries and wages were higher by 10.4 p.c., the May 1 disbursements of the co-operating firms aggregating $\$ 6,957,133$, as compared with $\$ 6,304,007$ at Apr. 1 .

The average earnings per employee at the beginring of May stood at \$37.89, exceeding by 97 cents the Apr. 1 per capita figure of $\$ 36.92$. At May 1, 1947, the average had been $\$ 34.63$, and that at May 1, $1946, \$ 30.84$. The latest index of employment, at 140.6 , was 5.6 p.c. above the figure of 133.2 at May 1 of last year, while the payroll index was higher by 15.5 poc. In regard to the figures of average earnings in this industry, it must be recalled that large numbers of casual and unskilled workers are employed therein, as well as many highly skilled tradesmen.

Services. - Seasonal expansion in employment took place at May 1 in those branches of the service industries for which data are available, the 1,151 larger firms $1 /$ making returns having a staff of 66,530 persons, 1,941 more than at the beginning of April. There were moderate gains in laundries and dry-cleaning plants, together with relatively larger increases in hotels and restaurants. The weekly salaries and wages paid to the persons in recorded employment at Nay 1 aggregated $\$ 1,704,561$, as compared with $\$ 1,657,169$ at Apr. 1. The index of employment, at 245.0 , was higher by 5.6 p.c. than that of 231.9 at the beginning of May 1, 1947, since when the index of payrolls has shown a rise of 13.5 p.c. The per capita figure at May 1 was $\$ 25.62$, as compared with $\$ 25.66$ at Apr. 1 , and $\$ 23.37$ at May 1, 1947. Attention must again be drawn to the fact that in hotels and restaurants, as in logging, many of those employed receive board and lodging as part of their remuneration.

Trade. - There was an increase in recorded employment in wholesale trade at

# EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS INDUSTRIES OTHER THAN AGRICULTURE 

The arve is based upor the number of employees al work al the first day of the month as indicaled by the firms reporting incompacison. will the dverage emploment the yafforded during the calendar year 1926 as 100 . Curves are plofled for 1929, The year of maximim industrial activily; for 1933, when employment was at its minimun in The record since 1920 , and for the years since 1938

Nay 1，when retail stores showed a considerable decine．The 3，656 larger trading， establishments 1 furnishing information had 256,709 employees at the date under review， as compared with 257,512 at Apr．1。 This unseasonal decrease of 0.3 poc．was accompanied by an advance of 0.6 p．c．in the weekly salaries and wages disbursed by the reporting firms；these were given as $\$ 8,724,890$ ，as compared with $\$ 8,670,548$ in their preceding return．The average per person on their staff was $\$ 3.99$ ，as compared with $\$ 33.67$ at Apr。1，and $\$ 31.11$ at the first of May in 1947 ．During the year，the index of employment in trade has risen by seven poco while that of payrolls has gained by 16.2 p．c．

Financial Institutions－Information received from 1,000 leading financial institutions $1 /$ showed a loss of 277 in the number of their employees，bringing their personnel to 84,047 ．The weekly salaries and wages earned by these persons amounted to $\$ 3,252,081$ ，as compared with $\$ 3,230,284$ in the week of Apr．1．The per capita earnings were $\$ 38.69$ at May 1，compared with $\$ 38.56$ at Apr． 1,1948 ，and $\$ 37.42$ at May 1 of last spring．Since then，the index of employment in financial institutions， at 159.7 ，has risen by 4.4 p．c．，accompanied by an increase of $7.4 \mathrm{p} . \mathrm{c}$ ．in the index number of payrolls．

## EMPLOYMENT AND PAYROLLS AS REPORTED BY LEADING FIRMS IN THE ECONOMIC ARFAS．

There were increases in employment in the major industrial divisions at the boginning of May in Nova Scotia，New Brunswick，Manitoba and British Columbia．In the last－named，thare was an advance of 2.3 p．c．The gains in the other provinces where the trend was upward were small．In Prince Edward Island，Quebec，Ontario， Saskatchewan and Alberta，the general movement was unfavourable．In large part， the losses were due to seasonal curtailment in logging operations．In Prince Edward Island，Quebec and Saskatchewan，the weokly salaries and wages disbursed by leading firms were lower than at Apr．l，but elsewhere the indicated payrolls were higher． In all provinces except．New Brunswick，the general averages of weokly earnings in the major industrial groups also exceeded those indicated a month earlier，while in all areas，the per capita figures were higher than at May 1， 1947.

Maritime Provinces．－Improvement was reported in industrial employment in the Maritime Area at the beginning of May，when activity increased in Nova Scotia and New Brunswick，but diminished in Prince Edward Island．Data were tabulated from 1，366 leading employers $1 /$ in the Maritime Provinces，whose staffs included 131,652 persons， a gain of 1.5 poc．from Apr．1．This advance was accompanied by that of 3.3 p．c．in the payrolls they reported；these aggregated $\$ 4,772,287$ ，as compared with $\$ 4,619,261$ in the week of Apr．1．The index of employment，at 168.6 at May 1，was 1．5 p．c．above that of 166.1 at Apr．1，and 11.1 p．c．higher than the May 1，1947，indax of 151．7． The latest figure also slightly exceeded that of 167.8 at May 1，1946，but was lower than at the same date in 1945,1944 and 1943．In the last 12 months，the index of payrolls has risen by 17.5 p．c．The per capita weokly eamings stood at $\$ 36.25$ at the date under review，as compared with $\$ 35.61$ at Apr。 1,1948 ，and $\$ 33.25$ at May 1， 1947.

Heightened activity was noted at the beginning of May in mining，wholesale trade and construction．Manufacturing showed a minor advance．Animal－food processing，pulp and paper and some other classes afforded more employment，but the textile，iron and steel and certain other divisions reported losses．The changes on the whole in these industries were small．There were large seasonal decreases in logging and transportation．

Quebec．－Industrial activity in Quebec showed a considerable recession， which repeated the movement indicated at May 1 in the last five years，although it was contrary to the trend previously shown at that date．Statistics were tabulated
from 4，989 of the large industrial employors $1 /$ with 555,318 persons on their staffs， 11,247 fewer than at Apr．1．The index had then stood at 187．3，declining to 183.6 at the date under review，as compared with 182.2 at May 1，1947．The weokly salaries and wages paid by these establishments were also lower，totalling $\$ 21,223,502$ ， as compared with $\$ 21,296,191$ in the preceding period of observation．The per capita weekly figure，however，advanced from $\$ 37.59$ at Apr。 1 to $\$ 38.22$ at the beginning of May．At the same date in 1947，1946， 1945 and 1944，the averages had been $\$ 34.51$ ， $\$ 30.74$ ，$\$ 31.24$ and $\$ 30.59$ ．respectively．In the last 12 months，the index number of employment has slightly risen，while that of aggregate weekly payrolls has advanced by 11.8 p．c．

Employment in manufacturing at the date under review showed a further moderate decrease；animal food，lumber，vegetable food，pulp and paper，beverage， clay，glass and stone，non－ferrous metal and miscellaneous non－metallic mineral plants indicated heightened activity，while leather，paper product，rubber，textile， tobacco，chemical and electrical apparatus factories were slacker．In the non－ manufacturing classes，logging reported pronounced seasonal reductions，and there were rather small losses in retail trade．On the other hand，commications， transportation，construction and maintenance，hotels and restaurants，and laundries and dry－cleaning plants were more active．The gains reported in transportation and construction were most noteworthy．

Ontario．－A seasonal contraction in logging was largely responsible for a decline of 0.3 p．c．in the index of employment in Ontario at May 1，when manufac－ turing was also quieter．On the other hand，activity increased in comrunications， transportation，construction and maintenance，hotels and restaurants，and laundries and dry－cleaning plants．Within the manufacturing division，there were reductions in leather，vegetable food，rubber，textile，tobacco，electrical apparatus，iron and steel and non－ferrous metal factories，but the trend was favourable in the animal food，lumber，pulp and paper，printing and publishing，chemical，clay，glass and stone and miscellaneous manufactured product groups．The changes were not on a practicularly large scale．

The 7,679 leading firmsl／co－operating in the latest survey had a working force of 828,085 men and women，as compared with 830,757 at Apr．1．The weekly salaries and wages disbursed by these employers were higher，standing at $\$ 33,845,485$ ，as compared with $\$ 33,351.303$ in the preceding period of observation，when loss of working time at the Easter holidays had affected the total．The latest per capita figure was $\$ 40.87$ ，exceeding the Apr． 1 average of $\$ 40.15$ ．The figures at May 1，1947， 1946,1945 and 1944 had been $\$ 36.55, \$ 32.43, \$ 33.22$ and $\$ 32.97$ ，respectively．In the last 12 months，the general index of employment in Ontario has risen by 4.1 p．c．，to 197.1 at May 1，1948，while that of payroils has advanced by 16.4 p．c．

Prairie Provincen－There was little general change in the level of industrial employment in the Prairie Provinces at the first of May．The trend in Manitoba was favourable，but there was curtailment in Saskatchewan and Alberta．Statistics were compiled from 2，559 leading establishments $1 /$ in the Prairie Provinces with 221,231 employees；this was a decrease of 80 from Apr．1．On the other hand，the weekly salaries and wages reported by these firms，at $\$ 8,692,326$ ，exceeded by 0.8 p．c． their disbursements of $\$ 8,627,379$ at the beginning of April．The per capita weekly earnings rose from $\$ 38.98$ at Apr。1，to $\$ 39.29$ at the date under review，as compared with $\$ 36.27$ at May 1，1947．In the year，the index of employment has risen by $2.5 \mathrm{p} . \mathrm{co}$ ，and there has beon an advance of $11 \mathrm{p} . \mathrm{c}$ ．in the index of weekly payrolls．

Manufacturing，coal mining，logging and trade afforded less employment at the beginning of May than at Apr．1．The seasonal contraction in logging was considerable．The movement in the remaining industrial groups for which data are 1／See explanatory notes on pages I and II。
available was upward, there being improvement in transportation, construction and hotels and restaurants, with minor advances in communications. Within the manufacturing division, the animal-food processing and lumber groups reported lowered activity, but there were slight increases in clay, glass and stone, printing and publishing, and some other classes.

British Columbia.- Further expansion of a seasonal character was noted in this province at May $\mathrm{I}_{0}$ The 2,309 leading firms $1 /$ furmishing data had a combined working force of $182,740 \mathrm{men}$ and women, as compared with 186,885 in their last report. This advance of 2.3 p.c. was accompanied by that of 5.1 p.c. in the weekly salaries and wages distributed by these employers bringing their May latal to, $\$ 7,885,044$, as compared with $\$ 7,498,943$ at Apr. 1. The per capita earnings rose from $\$ 41.04$ at that date, to $\$ 42.19$ at the beginning of May, as compared with $\$ 38.50$ at May 1, 1947. In the 12 months, the index of employment has increased by 4.8 p.o., and that of payrolls, by 14.9 p.c.

Improvement was shown in manufacturing, logging, mining, transportation and construction at the date under review as compared with Apr. . Slight gains were also indicated in hotels and restaurants and trade. The most noteworthy advances were in mining, construction and logging. Within the manufacturing division, there were considerable seasonal increases in animal-food processing, while employment in iron and steel plants was quieter.

BMPLOYNENT AND PAYROLLS AS REPORTED BY LEADING FIRMS IN THF LARGER CITIES.
The following paragraphs deal briefly with the situation indicated at May 1 by employers in cities having populations of 35,000 persons and over.

Halifax. - Employment in Halifax considerably declined at the beginning of May, according to data received from 265 leading firms $1 /$ employing 21,677 men and women, as compared with 22,956 at Apr. 1. There was a large loss of a seasonal character in transportation. Manufacturing and communications showed small reductions; the oonstruction industry also laid off some workers. The weekly salaries and wages reported by the co-operating establishments decreased from $\$ 753,895$ in the preceding period of observation to $\$ 736,062$ at the date under review. The per capita figure was then $\$ 33.96$, as compared with $\$ 32.84$ at Apr. 1, and $\$ 33.40$ at May 1, 1947. In the 12 months, the index of weekly payrolls in Halifax has risen by 5.4 p.c., and that of employment, by 3.7 p.c.

Saint Johno- Industrial activity in Saint John showed an upward movement at May 1, when 183 leading employers $1 /$ reported an increase of 595 persons, bringing their forces to 15,301 . The weokly salaries and wages of these workers were given as \$527,802, a sum higher by three p.c. than those distributed by the same firms at the beginning of April. There were advances in employment in manufacturing, notably in iron and steel and food processing, and in transportation, construction and trade. The earnings averaged $\$ 34.49$ per employee, as compared with the per capita figure of $\$ 34.85$ in the preceding period of observation, and $\$ 31.50$ at the beginning of May of last spring. In the latter comparison, the index numbers of employment and payrolls in Saint John have advanced by 4.8 p.c. and 16.5 p.co respectively.

Montreal.-. The trend in Montreal was upward at May 1, according to information from $2,8 \overline{27}$ leading establishments $1 /$ with 286,527 employees, as compared with 283,117 at Apr.1. This seasonal advance of 1.2 p.c. was accompanied by a gain of 3.3 p.c. in their salaries and wages, which aggregated $\$ 10,993,713$ in the weok of May 1 。 The total of $\$ 10,644,135$ indicated by the same firms at Apr. 1, had been affected by the observance of the Easter holidays. The per capita weekly earnings, at \$38.37 at May 1, exeeeded those of $\$ 37.60$ at Apr. 1, 1948 , and $\$ 34.85$ at May 1, 1947. In the year, the index of employment in Montreal has risen by 2.1 p.c., and that of payrolls by 12.6 p.c.
1/ See explanatory notes on pages I and II。

There was a decrease in activity in manufacturing at the date under review, most of which took place in leather, paper product, textile, tobacco, electrical apparatus and iron and steel factories. The beverage, miscellaneous non-metallic mineral product and certain other classes, however, showed some improvement. Among the non-manufacturing industries, transportation, construction, hotels and restaurants and laundries and dry-cleaning plants afforded more employment, while trade was quieter.

Quebec - Further expansion was noted in employment in Quebec, where the 343 leading employers $1 /$ furnishing data reported a staff of $29,468 \mathrm{men}$ and women at May 1 . as compared with 29,136 at the beginning of April. This increase of 1.1 p.c. was accompanied by that of 5.1 p.c. in the weokly salaries and wages disbursed by these establishments, which amounted to $\$ 984,213$. The earnings per employee rose from $\$ 32.15$ at Apr. 1, to $\$ 33.40$ at the date under review, as compared with $\$ 30.19$ at May 1, 1947. The latest index of employment, at 192.9, was 13.1 poc. higher than at that date, since when the index of payrolls has gained by $24_{0} 7$ p.c.

There were moderate decreases in several manufacturing industries at the beginning of May, notably in iron and steel plants, while tobacco factories took on some additional employeos. Transportation, construction and hotels and restaurants also showed improvement as compared with Apr. 1.

Sherbrooke. Largely as a result of industrial disputes in the textile division, employment in Sherbrooke was at a lower level at May 1, according to information from 113 loading firms $1 /$, with a working force of 10,264 men and women, as compared with 10,683 at Apr。1。 Apart from the losses due to the strikes, the changes at the date under review were slight. The sums disbursed by the reporting industrialists in weokly salaries and wages amounted to $\$ 349,225$, as compared with \$338,646 in their preceding return, which had reflected the affect of the Easter holidays. The per capita earnings ware \$34.02 at May 1 and \$31.70 at Apr. 1, as compared with $\$ 30.07$ at the beginning of May, 1947. In the latter comparison, the general index of employment in this city at May 1 showed little change, but that of payrolls was higher by 13.3 p.c.

Three Rivers.- Industrial activity showed an upward movement in Three Rivers at May 1. The working forces of the 102 larger establishments $1 /$ in the city from whicin data were received aggregated 10,604 , as conpared with 10,278 at the beginning of April. The salaries and wages they reported amounted to $\$ 411,865$, an average of $\$ 38.84$ per emplovee, as compared with a combined weekly payroll of $\$ 391,121$, and a per capita figure of $\$ 38.05$ in the preceding period of observation; the mean at May 1 of last year was $\$ 33.31$. There were gains in employment at the date under review as compared with Apr. 1 in manufacturing and transportation. Within the former division, there was improvement in pulp and paper mills. In the 12 months, the general index of employment in Three Rivers has advanced by d.9 p.c., and there has been a gain of 17.4 poc. in the index number of weekly payrolls.

Toronto. - Little change on the whole was indicated in Toronto at May 1. The personnel of the 2,726 larger industrial establishmentsl/ co-operating in the latest survey was given as 264,520 , a ifgure insignificantly higher than that reported a month earlier. The trend in manufacturing was downward. There were losses in rubber, vegetable food, electrical apparatus and leather plants, while slight improvement was shown in animal food, beverage and iron and steel factories. The trend was generally though moderately favourable in the nonamanufacturing industries. The most important gains were in transportation, construction, hotels and restaurants and trade.

The weekly salaries and wages reported at May 1 aggregated $\$ 10,752,001$, as compared with $\$ 10,494,700$ in the preceding period of observation, in which had fallen the Easter holidaysi the increase in the month amounted to 2.5 poc. The por capita
weekly earnirgs advanced from $\$ 39.69$ at Apr， 1 to $\$ 40.65$ at the date under review： the figure at May 1，194\％，had been $\$ 36.40$ ．In the 12 months，the index number of employment has risen by 4.1 p．c．s and that of payrolls，by 16.5 poco

Ottawa．．．There was a slight reduction in recorded employment in Ottawa at May 1．The changes in the various groups we re not marked；manufacturing and construction showed small general advances，while trade was quieter．Meturns were furnished by 317 of the larger industrial employers $1 /$ in the city with a staff of 24,684 men and women，as compared with 24,767 at the beginning of April．The amounts which they distributed in weekly salaries and wages at the date under review were given as $\$ 842,824$ ，as compared with $\$ 825,842$ in the weok of Apr． 1 ，which had included the Easter holidays．The latest per capita figure was $\$ 34$ ， 14 ，as compared with $\$ 33.34$ in the preceding period of observation，and $\$ 31,23$ eat May 1 ，1947。 The most recent index of employment，at 183.5 ，was $3.4 \mathrm{p} \cdot \mathrm{c}$ 。 above that indicated a year earlier，while the index of payrolls showed an advance of 13 poco in the same comparison．

Hamilton．－Employment in Hamilton moderately increased．There was a small gain，on the whole，in manufacturing，mainly in clay，glass and stone plants． Transportation＂construction，hotels and restaurants and laurdries and drymeleaning plants were also more active；the gain in constmuction was quite large．A combined working force of 64.217 persons was employed by the 445 leading firms／co－operating in the Bureau＇s latest survey，as compared with 63,624 at Apro 1．Their weekly salaries and wages，at $\$ 2,784,963$ ，were groater by 5.6 p．c．than those of $\$ 2.637,245$ which they had reported at the beginning of April．when the observance of the liaster holidays had been a factor．The average per employee rose from $\$ 41.45$ at that date， to $\$ 43,37$ at Way 1，as compared with $\$ 36,84$ at May 1 of last year．In the period since then，there has been a rise of 5.3 poc ，in the index number of employment，and of 23.8 poc．in that of weekly payrolls．

Windsor：－The trend in Nindsor continued downward．Reduced activity was noted in iron and ste日l plants．The changes in the remaining industries were slighto Informa－ tion we received from 279 leading employers $1 /$ with 37.303 workers，as compared with 37,969 in their last return．The weekly salaries and wages of the employees reported at the date under review amounted to $\$ 1,794,308$ ，exceeding by 0.9 poc．their earnings of $\$ 1,778,092$ in the week of Apr。1．As compared with May 1．1947，there was little general change in the level of employment but the latest index of weekly payrolls shows an increaso of 11.1 p，c．The per capita earnings advanced from \＄46．83 In the week of Apr．1．when the observance of the Easter holidays had been a factor， to $\$ 48.10$ at the date under review，as compared with $\$ 43.52$ at the beginning of May last year．

Fort Tilliam－Port Arthur．－Moderate seasonal expansion was indicated in Fort William and Port Arthur at the beginning of May；the employees of the 139 larger establishments 1 co－operating in the monthiy survey of employment and payrolls aggregated 11.643 ，exceeding by 202 the number on their staffs at Apr．1．The most noteworthy gain was in transportation．Manufacturing，on the other hand，was quieter than at Apr．1．The weekly salaries and wages distributed by these firms showed an increase．rising from $\$ 465,059$ in their preceding report，to $\$ 488.643$ at May $1_{\text {，}}$ or by 5.1 poc．The per capita weekly figure was $\$ 41$ ． 57 ，as compared with $\$ 40$ ， 65 at Apr．10 and $\$ 37.07$ at May 1，1947．In the latter comparison，the index of employment showed a gain of 4.1 p．c．e and there was a rise of 18.1 p．c．in the index of payrolls．

Kitchener … Waterloo．－Curtailment in employment was noted in Kitchener and Waterloo at the first of May，when there were declines in manufacturing，notably in wood－using and rubber factoriess．Construction was rather more active．Data were compiled from 190 leading firms $1 /$ whose working forces totalled 20,256 ，as compared with 20.652 at Apx 1．The salaries and wages of these employees were stated at
I／See explanatory notes on pages I and II．
\＄777，192，as compared with $\$ 776,258$ a month earlier．The per capita figure at May 1 was $\$ 38.37$ ，as compared with $\$ 37.59$ at Apr 。1，and $\$ 35.11$ at the first of May of last spring．Since then，the index numbers of employment and weekly payrolls in these cities have advanced by 2.3 p．c．and 12.4 p．c．，respectively．

London．－Industrial activity in London was at a rather higher level at May 1 than at Apr．1，according to information furnished by 291 leading employers $1 /$ with a staff of 25,559 persons，as compared with 25,482 a month earlier．There was a minor advance in manufacturing，and transportation also afforded slightly more employment． The weekly payrolls distributed by the cooperating firms amounted to $\$ 972,773$ ， exceeding by 1.5 p．c．their disbursements of $\$ 958,547$ at Apr． 1 ．The average earnings per employe rose from $\$ 37.62$ in the preceding survey，to $\$ 38.06$ at the date under review，as compared with $\$ 33.81$ at May 1，1947．Since then，the index of employment in London has mounted by 1.5 p．c．a and that of salaries and wages，by 14.6 p．c．

Winnipeg：－Industrial employment in Winnipeg showed a slightly upward movement at May 1 ，when the 733 larger establishmentsl／furnishing returns had a personnel of 65,337 ，a gain of 0.2 p．c．from the preceding month．There was a moderate recession in manufacturing．in which animal and vegetable food processing， lumber and textile plants were slacker．Trade was also quieter，but improvement was shown in construction．The weokly salaries and wages distributed by the reporting firms were higher，aggregating $\$ 2,350,575$ ，as compared with $\$ 2,317,645$ at Apr． 1 。 The average earnings per employee stood at $\$ 35.98$ ，as compared with $\$ 35.54$ a month earlier and $\$ 33.05$ at May 1，1947．In the 12 months．the index number of payrolls has risen by 10.2 p．cos and the index of employment，by 1.5 p．c．

Regina．－A slightly higher level of industrial activity was indicated in Regina at the beginning of May；statistics were compiled from 180 leading employers ${ }^{1 /}$ in the major industrial divisions with a working force of 10,636 persons，as compared with 10,587 at Aprol。Construction and hotels and restaurants showed some improvement in employment．On the other hand，transportation，manufacturing and trade were slacker．There was an increase in the weekly salaries and wages paid by the firms from which data were received；these rose from $\$ 368,364$ in the preceding period of observation，to $\$ 370,589$ at the date under review．The average earnings per employee were $\$ 34.84$ ，as compared with $\$ 34.79$ at Apr。1，and $\$ 31.80$ at May 1 of last year．In the latter comparison，the latest index of employment showed a gain of 4.5 p．c．，while that of payrolls was higher by 11.6 p．c．

Saskation－The situation in Saskatoon slightly improved，the employees of the 148 larger industrial establishmentsl／furnishing data on employment and payrolls numbered 7,464 at May 1，as compared with 7.399 at the beginning of April．Manufec－ turing was quieter；construction and trade were brisker，while other industries showed little general change．The weekly salaries and wages disbursed by the reporting firms were a little lower，standing at $\$ 255,129$ at the date under review， as compared with $\$ 255,423$ in the preceding period of observation．The latest per capita figure，at $\$ 34.18$ ，was less than the Apr。1 average of $\$ 34.52$ ，but considerably exceeded that of $\$ 31.60$ at May 1，1947．In the last 12 months，the index of employment in Saskatoon has declined by 0.8 p．c．，but the index of payrolls has advanced by 8.3 p．c．

Calgary．－The trend of employment in Calgary was favourable at the beginning of May．Manufacturing showed fairly general improvement，and construction was also busier．The 312 larger industrial firms l／in the city whose returns were received had a combined staff of 21,167 men and women，as compared with 20,859 at the first of April；their weakly salaries and wages rose by two poc．，from $\$ 780,193$ at Apr．1，to $\$ 795,547$ at the date under review．The average per employee was then $\$ 37.58$ ，as compared with $\$ 37.40$ at Apr。1，1948，and $\$ 34.14$ at May 1，1947．In the year，the index of employment in this city has risen by 3.4 p．c．，and the index of 1／See explanatory notes on pages I and II．
payrolls，by 13.2 poc．
Edmontono－A slightly downward tendency was indicated in Edmonton at May 1， when there were small losses in employment in manufacturing，transportation and retail trade．The 256 leading firms $1 /$ co－operating in the latest survey had working force of 19,308 persons，to whom they paid the sum of $\$ 695,703$ in weekly salaries and wages．At Apr．1，they had employed 19，330 men and women，whose earnings had aggregated $\$ 689,432$ ，an average of $\$ 35.67$ ．The latest per capita figure was $\$ 36.03$ ， and that at May 1，1947，\＄32．95．Since then，the index numbers of employment and payrolls in Edmonton have risen by 6.9 p．co and 14.3 p．c．，respectively．

Vancouver．－Manufacturing operations in Vancouver were at a rather higher level at May 1，wen moderate improvement was also noted in several other industrial groups．The advance in construction was most noteworthy．On the whole， there was an increase of 696 in the number of employees reported at the date under review，when the 1，014 larger industrial establishments $1 /$ furnishing data had a personnel of 85,452 ．Their weekly salaries and wages totalled $\$ 3,413,584$ ，as compared with $\$ 3,295,595$ at Apr ．1．The per capita earnings were $\$ 39.95$ ，exceeding the mean of $\$ 38.88$ at Apr．1，and that of $\$ 36.38$ at May 1，1947．In the latter comparison，the index numbers of employment and aggregate weekly payrolls at the date under review showed increases of 4.0 poco and $14.6 \mathrm{p} \cdot \mathrm{cos}_{0}$ ，respectively。

Victoria．－The trend of omployment in Victoria was downard at the first of May；losses took place in manufacturing，and within that division，notably in iron and steel plants．Transportation and hotels and restaurants，on the other hand，afforded rather more employment．The changes in the remaining non－manufac－ turing industries were sma11．Returns were received from 215 of the leading omployers 1 ／in the city with a working force of 13,039 men and women，as compared with 13,284 a month earlier．This decrease of 1.8 p．c．was accompanied by a gain in their weekly salaries and wages，which aggregated $\$ 507,765$ ．The total reported by these firms at Apr． 1 was $\$ 490,611$ ，a figure which had been affected by loss of working time during the Easter holidays．The average per employeo was then $\$ 36.93$ ， rising to $\$ 38.34$ at May 1．The liay 1，1947，figure had stood at $\$ 35.24$ ．In the last 12 months，the index of employment in Victoria has shown practically no general change，while that of weokly salaries and wages has risen by 10.8 p．c．

## TABLES．

Tables 1 to 5 in the following pages show the number of employees reported at May 1，1948，by the co－operating establishments，together with the aggregate weekly payrolls and the per capita earnings of such persons，classed by industry in the Dominion as a whole，in the economic areas and the 20 leading industrial citias． Index numbers of weekly payrolls，based on the amounts disbursed by the co－operating firms at June 1，1941，are also given；to provide comparisons of the trends of employment and payrolls，the index numbers of employment have been converted for these tables from their original base，1926 $=100$ ，to June 1，1947，as 100．In Tables 6 to 11 are given index numbers of employment，on the 1926 base，for the provinces and oconomic areas，the eight leading cities，and for the major industrial groups in the Dominion as a whole。

On page 6 appears a summary table showing the numbers of men and women employees reported by leading firms in the provinces，the cities and the major industrial divisions at May 1，with comparisons from earlier surveys．Table 12 gives industrial data，in considerable detail，for the Dominion as a whole．
