EXPLANATION OF THE METHOD USED IN PREPARING TBE MOMTHLY STATIST IUS OF EMPLONMEMT AND PAYROLSS.

The monthly surveys of employment and payrolls extend to all branches of the following industries: manufacturing, logging, mining, oommications, tranaportation, construction and maintenance, trade and finance; the establishments for which data are given under the hoading "services" are chiefly hotels and restaurants and laundries and dry-cleaning plants. For practical reasons of collection and tabulation, the surveys are in the main limited to firms usually amploying 15 persons and over. Firms reducing their staffs below this minimum are not necessarily removed from the mailing list. Establishments are asked to furnish data for all classes of employees irrespective of their functions in the business, but to exclude statistics for the owners. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different industries and areas.
1.- COVERAGE - The virtusl limitation of the monthly surveys to establishments having 15 employees or more results in a relatively even representation of employment in the various provinces and in the larger cities for which data are segregated, but also results in variations in the coverage of different industries, depending upon whether a given industry is ordinarily organized in large or small units of operation. Complete information respecting the distribution of the working population is available only at 10 year intervals, and sometime after the Census dates; comparisons of the data of the monthly surveys and those obtained elsewhere in the Bureau are complicated by the fact that the industrial classifications differ in several important respects. The distribution of the persons employed at June 1,1941 , by the co-operating firms in comparison with the distribution of the wage-earners and salaried employees enwerated in the Census of June 1, 1941, was discussed in the 1944 Annual Review of Employment and Payrolls. This showed in the monthly enquiry, an industrial coverage of all employees enumerated in the Census which ranged from over $41 \mathrm{p} . \mathrm{c}$. in the hotel-and-restaurant and laundry-and-iry-cleaning group, and more than 47 p.c. in trade, to over 93 p.c. in manufacturing and nearly 97 p.c. in mining. Differences in the industrial classifications of establishmenta and individuals oontributed to an important extent to these disparities, exaggerating the high coverage in mining and manufacturing, and minimizing that in trade. The present coverage in the above-mentioned service divisions and in trade may be estimated at 48 p.c. and 52 p.c., respectively.

It should be noted that the statistics of persons employed, as published in various tables in the monthly bulletins, do not represent estimates of the total numbers engaged in the specified areas or industries, but show the distribution of the workers on the ataffs of the co-operating firms at the indicated dates, togetner with the distribution of their weskly payrolls, and the per capita weekly earnings of such employees.
2.- THE QUESTIONNAIRS - From 1921 to 1941, the questionnaire used in collecting current data on employment calledfor a statement of the number of persons at work on the last working day of the month. With the introduction of the statistios of payrolls in the spring of 1941, it became necessary to ask for information showing the numbers of employees on the payrolls in the last pay periods in the month, to relate to the salaries and wages. The difference in the coverage of employment as a result of this change was considerable, espeoially in industries with high proportions of casual labour. In so far as was possible, adjustment in the records was made in 1941, to preserve the comparability of the data collected prior to the 8 pr ing of 1941 , and those thereafter collected. The inclusion of oasual workers to a groater extent than was the case in the earlier surveys nevertheless constitutes an element of incomparability in the present statistics of employment and tnose tabulated prior to the institution of the complementary atatistios of payrolls in April, 1941. The questionnaire now used asks employers to furnish data showing tho gross earnings of their salaried employees and wage-earners in the last pay periods in the month, the employees and their earnings to be grouped according to the duration of their pay periods, whether these be monthly, semi-monthly, fortnigntly, weekly, etc. The payrolls reported include amounts deducted for taxes, unemploymont insurance contributions, etc. Cost-of-living allowances, incorporated in the basic wage-rates as from Feb. 15,1944 , are included, as was the cese before their incorporation in the basic rates. Commissions and incentive and production bonuses are also included.
3. - THE PROCESSING - In the Buresu, the statistics of salarios and wages reported for any period exceeding a weok are reduced, for tabulation purposes, to the proportions whioh would be earned in one week in the period, the numerator of the fraction ordinarily used for this purpose
being six days, the standard working week; the denominators of the fractions are the numbers of working days in the different pay periods, excluding only the Sundays. Where operations are continuous, the numerator of the fraction is seven, tho denominator belag the total number of days in the pay period, including Sundays. In the case of employees paid at annual or monthly rates, so that their earnings are not affocted by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, without regard to the length of the calendar month. The sums resulting from these various caloulations are then aggregated to give the total amounts, which, on the average, would be paid for services rendered in one weok by the persons on the payrolls of the cooperating establishments. The omployees reported are not in all cases necessarily employed for a period of a weok by one firm. Employers are urged to make a practice of furnishing data only for the last pay period in the month for their various classes of employees rather then to aggregate statistics for sereral pay periods, since the lattor mothod tends to oxaggerate the amount of duplication possible in the statistics of employment in cases where individuals may be employed by more than one co-operating establishment in a period of soveral weoks.
4. THE TABULATION - The data tabulated monthly show the number of persons drawing pay from the establishments furnishing returns at the given date, and their weekly oarninge, togetner with the numbers of employees and the payrolls of the same firms in the preceding month, and in the basic periods. The statistics of the first tabulation are proliminary, the re-tabulation of the statistics on the succeeding month's tabulation incorporating revisions in the returns originally tabulated, as well as reports received too late for inclusion in the preliminary tabulation.
5.- THE INDEX NUMBERS OF EMPLOYMENT - The index numbers represent the percentage relationship between the number of persons employed by the establishments ourrently furnishing data and the number which thoy had omployed in the basic period. The number of workers employed in the basic period by firms which then operated but have since gone out of business are continued in the basic average figures, while firms or branches opening for business since the basic period are tabulated with zero base figures. The basic averages of establishents which operated in the base period but have since boen added to the mailing list are incorporated in the basic figures from the date when their co-operation was first obtained.
6.- THE INDEX NUNBERS OF PAYROLLS - Shortly after the institution of the statistios of payrolls, it became necessary to present the data in the form of inder numbers. The earliest poriod which could be adopted as a base was selected for the purpose, namely. the week of June 1, 1941. The ourrent disbursements are thus related to the sums expended in salaries and wages by the co-operating employers on or about June 1, 1941, as 100 p.c. To provide a measurement of the changes in employment and payrolls from the establishment of the latter series, the monthly indexes of employment are related to June 1. 1941, as 100, in the tables giving the two sets of data. For all purposes apart fron comparison with the statistics of payrolls, however, the indexes compiled on the original 1926 base should be ueed.
7.- THE FBEKLY GARNINGS - The average weekly oarnings represent the division of the aggregate weekly salaries and wages reported by the co-operating establishments, by the number of their employees in the same pay periods; the index numbers of average weekly earnings given in the table on page 4, are based on the averages reported in the week of June 1, 1941, as 100.

Statistics of average hourly and weekly earninps of vage-earners for whom the larger employers keep record of hours worked are contained in the monthly bulletins on manhours and average hourly earnings, aveilable from the end of 1944.

Herbert Marshall<br>H．F．Greonway<br>M．E．K．Roughsedge

Note：In addition to the statistics of the present bulletin， other available data respecting the current labour situation are published in the Monthly Labour Gazette， the official journal of the Department of Labour． These comprise information regarding the operations of the Unemployment Insurance Commission，including statistics of the Employment Service，and statements showing unemployment as reported quarterly by trade unions．

GENBRALSUMMARY。

## EMPLOYMENT

There was a further upward movement in employment in the major industrial divisions at the beginning of September．The percentage increase from Augo 1 was somewhat below－nomal in the experience of earlier years of the record，although it coincided with the gain indicated at Sept。1，1947．Data were received by the Dominion Bureau of Statistics from 19， 232 leading employers whose working forces rose by 0.2 p．co，while their expenditures in weekly payrolls advanced by 0.7 p．c． from Aug．1．Based on the 1926 average as 100 ，the index of employment was 201．3， as compared with $200 . S$ at Aug． 1 ，and 193.2 at Sept．1，1947．The latest figure is the highest in the record．

A brief review of the industrial figures at the beginning of September shows considerable expansion in manufacturing，in which employment rose by l．3 p．c．， largely as a resuit of seasonal causes．Improvement in the month was also indicated in mining，communications，transportation，building and railway construction and maintenance，and wholesale trade．On the other hand，curtailment of operations was indicated in logring，highway construction and maintenance and laundries and dry－ sleaning establishments．The losses in the highway group，which took place largely in Quebec，were substantial．As conpared with Sept。l of 1947，there were increases in employment in each of the major industrial divisions except logging，in which the index number was $10.1 \mathrm{p}, \mathrm{c}$ ．lower than in the early autumn of last year．

Within the manufacturing division，the most noteworthy gain was that of 8.9 p．c． in vegetable food processing．Large increases were also indicated in textile and iron and steel factories，with smaller advances in the leather，printing and publishing，paper products，tobacco，non－ferrous metal and miscellaneous manufacturing industries．There was a decline of $0.7 \mathrm{p}, \mathrm{c}$ ．in reported employment in lumber mills， with minor reductions in a few other classes．The general index number in manufacturing at the date under review was higher than at Sept。 1 in any earlier year of the record except 1942－1944．

Payrolls．－Accompanying the moderate advance generally indicated in industrial employment at the beginning of September，was a relatively larger increase in the

1/ This classification compriser the following:- iron and staol, non-ferrous metals, alectrical apparat.us, lumber, musical instruments and clay, glass
and stono products. Tho non-durable group includes the remaining manulucturing industries, as insted in Iables 1 and 9 , with the exception of electric light end power.
Mainly hotels and restaurants and 9undry and dry-cleaning piants.
See explanatory statement on pages I and II.
amount of tho salary-and-wage payments $/$ / of the comoperating firms, whose weekly payrolls rose by $0.7 \mathrm{p.c}$. as compared with Aug. l. The pain partly resulted from the payment of hifher wage rates in some important industries, but was due in part to the resumption of more normal operations in certain establishments in which the staffs had been on vacation a month earlier. Vacations contirued to affect the situation in the period under review, however, when intense heat, in some localities had also caused losses in workinf, time. The average earnings ${ }^{2 /}$ per employee stood at $\$ 40.88$ at Sept. 1, as compared with $\$ 40.66$ at the beginning of August, and $\$ 36.76$ at Sept. 1, 1947. The latest per capita figure is the highest in the record of $7 \frac{1}{2}$ yoars. As compared with Sept. 1, 1947, there was an increase of $4.2 \mathrm{p} . \mathrm{c}$. in the general index of employment in the eight loading industries, of $15.9 \mathrm{p} . \mathrm{c}$. in the index of weokly payrolls, and of 12.2 p.c. in the index of average earnings of persons employed by the larger industrial establishments.

Then statistics for the finance croup are included with those just given for the eight leading industries, the survey shows that the number of persons in recorded employment at Sept. 1 also increased by 0.2 P.C., while their salaries and wages advanced by $0.7 \mathrm{p} . \mathrm{c}$. in the month. The average eamings in the nine leading industries were $\$ 40.83$, as compared with $\$ 40.62$ at Aug. 1, 1948 , and $\$ 36.79$ at Sept. 1, 1947.

Table $A$ on pare 2 summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas, and the 20 leading industrial cities, and gives comparisons as at Aug. 1, 1948, and Sept. 1, 1947. On page 4 appears a monthly record for the eight and the nine leading industries as a whole, and for manufacturing, showing the movements of employment and payrolls in the period since 1944. The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June l, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employmont have been converted from their original base, $1926=100$, to June 1, 1941, as 100 .

Table $B$ on page 4 shows that in the period for which current data on payrolls are available, the index number of employment in the eight leading industrial groups has increased by 31.8 p.c., that of ageregate weekly salaries and wages has risen by 108.9 p.c., and the per capita earnings have advanced by 61.9 poc. Including finance, the gains in employment, payrolls and average weekly earnings from June 1, 1941, to Sept. 1, 1948, amounted to 32.1 p.c., 108.2 p.c. and 60.2 p.c., respectively. These increases are the highest in the record. The oxplanation given in preceding bulletins for the relatively greater rise in the salaries and wages than in the numbers employed may again be stated:- (1) the payment of higher ware-rates in large numbers of industries and establishments, in addition to the general increase resulting from the mandatory payment of cost-of-living allowances to the majority of workers during the war; the rates at which these bonuses were paid were increased on more than one occasion before they were absorbed in the basic wage-rates as from Feb. 15, 1944, (2) the progressive up-grading of employees as they gained experience in their work, and (3) reductions in the numbers and proportions of women workers.

In manufacturing, the index of employment during the period for which monthly statistics of payrolls are available has risen by $24.5 \mathrm{p} . \mathrm{c}$. , the salaries and wages have mounted by $98.8 \mathrm{p} . \mathrm{c}$. , and the weekly earnings per person in recorded employment have increased by $62.2 \mathrm{p}, \mathrm{c}$. In the non-manufacturing industries taken as a unit, the index of employment at Sept, l had risen by 41.6 p,c. since the commencement of the record of payrolls, while the index of aggregate weekly salarios and wages showed a gain of 121.6 p.c.
1/For estimates of total expenditures in wages, salaries and supplementary labour income, see the bulletins "Monthy Estimates of Labour Income".
2 The attention of those interested in hourly oarnings is dram to the statistics published in the monthly bulletins on man-hours and average hourly earnings.

With regard to the considerable variations in the average earninfs of workers in the different industrial classes, (shown in Tables 1 to 5 at the end of this report, and in the table on page 2) it must again be pointed out that the sex distribution of such persons is an important factor, frequently associated with differences in the ape groups. In peneral, the female workers tend to bolong to the younger age classes, in which the earnings aro naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in the industry is of course a factor of outstanding importance.

Sex Distribution. - Greater employment was indicated for female workers, but a slight falling off was shown in the employment of male workers at Sept. 1 as compared with a month earlier, according to the information furnished by the larger firms in the eight leading industries. The decline amonc men as compared with Auge 1 amounted to 0.2 p.c., while the advance among women was 1.9 p.c.; the gain was to a considerable extent seasonal in character, taking place largely in the foodprocessing industries. In each 1,000 persons in recorded employment at the beginning of September, 794 were men and 206 were women. At Aug. 1, 1948, the distribution was 797 men and 203 women per 1, non employees, while at Sept. 1, 1947, there were 792 men and 208 women per 1,000 persons in rocorded employment. A year earlier, the ratios were 780 men and 220 women per 1,000 workers.

Firms in the nine leading industries reported a general increase of 0.2 p.c. as compared with Aug. 1, since when the reported number of men showed a reduction of 0.2 p.c., as compared with a rise of 1.7 p.c. among women. The proportions in this group of industries were 784 men and 216 women per 1,000 workers; the latter ratio was higher than that of 213 women per 1,000 emplovees at Aug. 1 , but was below the proportion of 218 women per 1,000 employees indicated by the co-operating firms at Sept. 1, 1947. The ratios of women per 1,000 persons in recorded employment had reached its hifhest point at Oct. 1, 1944, when the proportion reported in the eight industries was 261 , and in the nine major industrial divisions, 271 per 1,000.

Increases in the number of men and of women on the payrolls of the larger establishments as compared with a month earlier were indicated in manufacturing. mining, transportation and wholosale trade. There were losses in employment for malo workers in logging and highway construction. Among women, activity also declined in comrunications, retail trade and laundries and dry-cleaning plants.

As compared with Sept. 1, 1947, the number of men employed by leading employers in the eight main industries rose by approximately 4.4 p.c., while the increase in the nine major groups also amounted to some 4.4 p.c. In the same comparison, the number of women employed by the larger establishments gained by about 3.3 p.c. in the case of the eight leading industrial divisions, and by approximately 3.2 poc. in the case of the nine main industries.

## TABLES.

The latest statistics of employment and payrolls are summarized in Table A on page 2, while Tables 1 to 5 at the end of this report contain the latest data of employment and payrolls, together with index numbers as at Aug. 1 and Sept. 1, 1948, and Sent. 1, 1947. In these tables, the index numbers of employment, calculated on their original base, $1926=100$, have been converted to June 1, 1941, for comparison with the data of earnings For all general purposes, apart from comparison with the payroll statistics, however, the index numbers of employment in Tables 6 to 11 , based on $1926=100$, should be used.

Table $C$ on page 6 summarizes for the provinces, the cities and the major industrial divisions, the latest statistics of employment, showing the numbers and

[^0]proportions of male and female workers reported at Sept. l, with comparisons from earlier surveys; in this table, the provincial and city figures given are those for the nine leading industries, including the employees reported in financial institutions, excluded in most cases from the data given in the table on page 2. Table 12 shows the sex distribution in a considerable list of industries in the Dominion as a whole at the date under review, with comparative statistics as at Aug. 1, 1948, and Sept. 1, 1947.

## THE SIT UATION AS REPORTGD BY THE LARGER FIRMS IN THE MAJOR INDUSTRIAL GROUPS.

## Manufacturing.

Employment. - The general trend of employment in leading manufacturing establishments was upward at Sept. 1 , when the percentage increase rather exceeded the average for the late summer in the experience of the years since 1920. Important seasonal improvement in the month was indicated in vegetable food processing; the pains in textile and iron and steel plants were also extensive, while those in leather, printing and publishing, paper products, tobacco, chemical, non-ferrous metal, petroleum and miscellaneous manufactured product plants were on a smaller scale. On the other hand, there were declines in employment in the animal food, lumber, pulp and paper and beverage industries. The losses were moderate, that of $0.7 \mathrm{p} . \mathrm{c}$. in the lumber group being most pronounced.

Information was obtained from 9,553 of the larger manufacturing plants in which the staffs increased by 1.3 p.c. as compared with Aug. 1. The index of employment, at 209.1 p.c. of the 1926 averape, was hipher at 2.9 p.c. than that of 203.3 at Sept. 1, 1947. The latest index was lower than those of $226.2,229.9$ and 215.6 in 1944, 1943 and 1942, respectively, but was otherwise the highest in the record for the time of yerr.

Payrolls in Manufacturing. - The salaries and wages received by persons on the payrolls of the representative manufacturing establishments furnishing data were also hicher by 1.3 p.c. in the week of Sept. 1 than in that of Aug. 1. The average per employee stood at $\$ 41.47$, as compared with $\$ 41.45$ at Aug. 1, 1948, and \$37.16 at Sopt. 1, 1947. In preceding vears of the record, the per capita figures at Sept. I were as follows: 1946, \$32.71; 1945, \$32.58; 1944, \$32.55; 1943, \$32.03; 1942, $\$ 29.72$, and 1941, \$26.22. The general figure in 1939 was $\$ 23.11$ per week.

Based on the weekly salaries and wages disbursed by the co-operating manufacturers on or about June 1, 1941, as $100 \mathrm{p}=\mathrm{c}_{\mathrm{s}}$, the index number of payrolls at Sept. 1, 1948, stood at 198.8, as compared with 196.2 at Aug, 1, 1948, and 173.3 at Sept. 1, 1947. There was thus a rise of $14.7 \mathrm{p} . \mathrm{c}$. in the 12 months in the indicated payrolls, as compared with that of $2.9 \mathrm{p}, \mathrm{c}$. in the index of employment in the same comparison. The average weekly earnings have advanced by $11.6 \mathrm{p}, \mathrm{c}$. in the year. The latest index of payrolls, like that of average weekly earnings, is the maximum in the record of over seven years.

Sex Distribution in Manufacturine - The establishments co-operating in the monthly survey at the beginning of September reported an increase of $0.6 \mathrm{p} . \mathrm{c}$. in the number of men on their payrolls, and of 3.7 poco in the number of women, as compared with Aug. 1. The considerable expansion in employment among the latter was largely due to seasonal causes. The proportion of 222 women per 1,000 workers of both sexes reported in manufacturing at the date under review exceeded that of 217 per 1,000 indicated a month earlier, but was lower than the ratios of 223 and 236 women per 1,000 indicated at Sept. 1 in 1947 and 1946, respectively.

Fmployment for women was brisker at Sept. 1 than at the beginning of August in I/See explanatory notes on pures I anc II.

leather, vegetable food, paper product, printing and publishing, textile, tobacco, chemical, electrical apparatus, iron and steel and non-ferrous metal factories, while there were slight losses in the number of female employees reported in the pulp and paper and a few other industries. The increases in vegetable foods and textiles, gmounting to $20.4 \mathrm{p} . \mathrm{c}$. and $2.7 \mathrm{p} . \mathrm{c}$. , respectively, were most noteworthy.

Heightened activity for men was noted in the vegetable food, leather, paper product, printing and publishing, textile, tobacco, chemical, iron and steel, nonferrous metal product, petroleum and miscellaneous manufacturing industries. The most pronounced gains were in edible plant, textile and iron and steel factories. There were reductions as compared with Aug. I in animal food, lumber, pulp and paper and beverage plants.

As compared with Sept. 1, 1947, there were increases of approximately three p.c. and 2.2 p.c., respectively, in the numbers of men and women employed by leading manufacturers.

Logging: - There was a contra-seasonal decrease in employment in bush work at the beginning of September, when statistics were received from 667 of the leading firms whose workers declined by 2.7 p.c. as compared with a month earlier. Standing at 217.8 , the index of employment was 10.1 p.c. below that of 242.2 at Sept. 1, 1947, the all-time maximum figure for the time of year. The weekly payrolls distributed by the reporting operators exceeded by 0.1 p.c. their disbursements at Aug. 1, 1948. The latest index of payrolls was lower by $2.7 \mathrm{p} . \mathrm{c}$ 。 than that recorded 12 months earlier.

The per capita earnings of persons reported in logging at the date under review stood at $\$ 39.80$, as compared with $\$ 38.67$ paid on or about Aug. 1. The figure at Sept. I of last autumn was $\$ 36.76$. As has previously been stated, the statistics of aggregate and average earnings in logring do not include the value of board and lodging, frequently a part of the remuneration of workers engaged in bush operations. The high labour tumover in many camps is also an important factor in lowering the indicated eamings; these differ greatly in rarious parts of the country, the average in British Columbia being decidedly higher than in any other province. In this cornection, attention is drawn to the figures given in Tables 2 and 3 at the back of this report.

Lining. - Expansion in mining operations was indicated at Sept. 1, when the 664 leading emplovers fumishing information reported an increase of $0.8 \mathrm{p} . \mathrm{c}$. in their workinf, forces as coripared with the beginning of August. The extraction of metalic ores afforded less employment, but considerable improvement was shown in coal and other ron-metalic mineral mines. The index of employment in mining as a whole at Seot. 1 was 181.1; as compared with 167.1 at the same date in 1947, there was a gain of 8.4 p.c.

The amounts distributed by the co-operating companies in weokly salaries and wages advanced by two p.c. at the latest date as compared with a month arlier. The per capita weekly earnings of their employees rose from $\$ 49.65$ at Aug. 1 , to $\$ 50.27$ at the beginning of September. A vear ago, the figure had been $\$ 44.31$.

Comunications.- A slight seasonal gain was recorded in the communication group as a whole at Sept. 1, when the reported staffs were higher by 0.4 poc. and the weekly salaries and wages disbursed by leading establishments rose by 1.5 p.c. as compared with Aug. 1. The per capita earnings of their emplovees advanced from $\$ 38.41$ at that date, to $\$ 38.83$ at the first of September, when the average was also higher than the mean of $\$ 34.88$ indicated at the same date of last year. Based on the 1926 average as 100 , the latest index of employment was 185.5 ; this was 8.1 p.c. above the Sept. 1, 1947, figure of 171.6. The index number of payrolls has risen in the twelve months by 19.3 p.c.

Transportation. - There was a further upward movement in employment in transportation and storage at Sept. 1. Improvement was noted in the steam railway and the shipping and stevedoring divisions; little change, on the whole, was reported in the streat railway, cartage and storage group. The general gain in transportation was seasonal in character. The index of employment stood at 145.3 , as compared with 141.8 at Sept. 1, 1947, previously the maximum for that date. The working forces of the 863 leading firms and branches furnishing, data were higher by 0.3 p.c. than at Aug. 1. The weokly salaries and wages disbursed by these employers at Sept. 1 exceeded by one p.c. their expenditures a month earlier. The per capitr earnings of their employees were also higher, rising from $\$ 50.39$ at Aug. 1 , to $\$ 50.71$ at the date under review, as compared with $\$ 44.22$ at Sept。1, 1947. Since then, there has been an increase of 2.5 p.c. in the index of employment, and of $17.6 \mathrm{p} . \mathrm{c}$. in the index of weekly payrolls in transportation.

Construction and Maintenance.- Construction and maintenance showed a seasonal decline at Sept. 1. Building and railway construction and maintenance reported heightened activity, but the trend in employment on highway construction and maintenance was unfayourable. Statistics were tabulated from 2,352 of the larger contractors whose working force were less by $3.5 \mathrm{p} . \mathrm{c}$ 。 than at Aug. l. Their weekly salaries and wages were lower by 1.8 p.c. The per capita earnings, however, rose from $\$ 38.43$ paid at Aug. 1, to $\$ 39.07$ at the date undor review; the average at Sept. 1, 1947, wes $\$ 35.85$.

The latest index number of employment, at 200.6 , was 11.5 p.c. above that of 179.S at Sept. 1 of last year. Since then, there has been an increase of 21.4 p.c. in the index of weakly payrolls.

Services.- The trend in laundries and dry-cleaning establishments was retrogressive at Sept. 1, when other branches of the service group for which data are currently available showed little general chanpe. The 1,213 co-operating establishments reported a decrease of 0.2 poc. in the number of their employees as compared with the preceding month. The salaries and wagos distributed by the firms furnishing data in the service industries at the beginning of September were also lower by 0.2 p.c. As compared with Sept. 1, 1947, however, there was a rise of 3.7 p.c. in the index of employment at the date under review, while the increase in the index of payrolls in the same comparison amounted to 13.2 p.c. The per canita earnings of the persons in recorded employment were $\$ 25.80$ at the beginning of September, as compared with the averages of $\$ 25.81$ at Aug. 1, 1948, and $\$ 23.40$ at Sept. l of last vear. Attention must be drawn to the fact that in hotels and restaurants, as in logging, many of these employed receive board and lodging as part of their remuneration; the former division constituted some 68 p.c. of the total reported in the service division as a wholo at the beginning of September. Part time work is also an important factor in the branches of the service industries for which data are currently available.

Trade. - The seasonal advance of 0.3 p.c. in the employment reported by leading trading establishments at Sept. I approximated the average at that date in the experience of past years. The 3,818 representative retail and wholesale merchants whose returns were received also reported a rise of 0.3 p.c. in their weekly expenditures in salaries and wapes. The average earnings of their employees were unchanged, at $\$ 35.19$, but were higher than the figure of $\$ 31.88$ recorded at Sept. 1 of last year. Since then, the index number of employment in trade has risen by $6.2 \mathrm{p} . \mathrm{c}$. , and that of payrolls, by $16.7 \mathrm{p} . \mathrm{c}$.

Financial Institutions - Statistics were tabulated from 1.017 banks, trust companies, insurance companies and other leacing, financial institutions, whose staffs showed practically no general change as compared with Aug. l. The weekly salaries and wages paid these employers, however, were lower by 0.2 p.c. at the date under review, The weekly earnincs siveraged were $\$ 39$. 58 per worker at Bept. 1 , as compurad

## EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS INDUSTRIES OTHER THAN AGRICULTURE

with $\$ 39.65$ in the last report，and $\$ 37.40$ at Sept．1，1947．In the vear，the index number of employment in financial institutions has advanced by 3.6 p．c．，while that of payrolls has gained by 9．1 p．c．

## EMPLOYMENT AND PAYROLIS AS REPORTED BY LEADING FIRMS $1 /$ IN THE ECONOMIC AREAS．

Industrial employment in Prince Edward Island，Nova Scotia，Ontario，Manitoba， Alberta and British Columbia showed improvement at the beginning of September，when declines from Aug． 1 were reported by leading establishments in New Brunswick，Quebec and Saskatchewan．The general changes in all areas were slight．The amounts of the weekly salaries and wages disbursed at Sept．l by the co－operating employers were greater than at Augo 1 in all provinces except Nova Scotia，New Brunswick and Queboc。 In most areas，the latest per capita figures were higher than those recorded a month earlier，Nova Scotia and New Brunswick beinf，the exceptions．In all provinces，the general averages were decidedly higher than at Sept。 1 in earlier years of the record．

Maritime Provinces．－Employment in the Maritime Provinces showed a downward movement at Sept．1，when the loss was seasonal in character．The 1，404 representative firms furnishing data in the eight major industrial groups reduced their staffs by l．l p．c．as compared with the beginning of August．There were small increases at the date under review in Prince Edward Island and Nova Scotia，but the trend in New Brunswick was unfavourable，largely as a result of seasonal curtailment in logging operations．

On the whole，manufacturing in the Maritime Provinces showed little change。 There were moderate gains in the vegetable food and iron and steel divisions，but employment in animal food processing plants and lumber mills was quieter．Among the non－manufacturing divisions，logging，construction and trade showed reductions，that in bush work being considerable．Mining and transportation afforded rather more employment，while the variations in the other industries were slight．

The weekly salaries and wages disbursed by the co－operating establishments at Sept． 1 were lower by two p．c．than at hug．1．The average earnings of their employees fell from \＄37．05 at that date，to \＄36．73 at the beginning of September，when the figure was higher than that of $\$ 33.46$ at Sept．1，1947．In the last twelve monthsn the index of employment in the Maritime Provinces has declined by 1.7 p．c．o，but that of payrolls has mounted by 11.8 poc．

Quebec．－The trend of employment in Quebec was retrogressive at Sept．I Manufacturing on the whole showed considerable expansion，there being additions to the reported working forces in leather，food，printing and publishing，paper product， textile，tobacco，chemical．iron and steel，non－ferrous metal and petroleum product factories．The most noteworthy advances were in iron and steel and textile plants． On the other hand，employment declined moderately in lumber and pulp and paper mills． Among the non－manufacturing industrios， 10 g ging，transportation and construction also showed curtailment，the losses in the last－named being substantial．Mining and trade reported heightened activity，although the gains were small．

The 5,120 leading emplovers in the eight major industries whose statistics were tabulated reduced their personnel by 0.8 p．c．at Sept． 1 as compared with Aug． 1 ． Their weekly salaries and wages at the date under review were lower by 0.5 p．c．The figure of average earnings was $\$ 38.92$ ，sonewhat higher than the mean of $\$ 3377$ at the beginning of August，1948，and considerably larger than the average of \＄35．21 indicated at Sept．1，1947．The latest index number of employment，at 204．3，was 4.2 p．c．above that of 196.1 at the same date of last year，while the index of weekly payrolls was higher by 15.3 p．c．

Ontario．－Industrial activity in Ontario showed a moderate seasomal advance at 1／See explanatory notes on pages I and II．
the beginning of September, according to data from 7,733 of the larger firms, whose employees rose by 0.8 p.c. as conpared with the preceding month. The weokly salaries and wages disbursed by these establishments showed an increase of 1.2 p.c. over their total at Aug. 1. The Sept. 1 per capita figure was $\$ 42.01$, as compared with $\$ 41.87$ in the last return, and $\$ 37.80$ at the beginning of September, 1947. The index of employment, at 205.2 at the date under review, was slightly above the Aug. 1 figure of 203.3 , and exceeded by 4.4 p.c. the Sept. 1, 1947, index of 196.4. In the latter comparison, there was an increase of $16 \mathrm{p} . \mathrm{c}$. in the index of weekly payrolls.

The number of workers reported in manufacturing operations in Ontario advanced by l. 4 p.c. as compared with a month earlier, bringing the index to 210.6 at Sept. 1 , when it was $3.8 \mathrm{p} . \mathrm{c}$. higher than at the beginning of September of last vear. A slight falling-off as compared with Aug. 1 was noted in animal food, leather and rubber factories, but there was considerable seasonal expansion in employment in vegetable food plants; smaller gains were noted in the printing and publishing, textile, clay, glass and stone, iron and steel, non-ferrous metal, petroleum and miscellaneous manufactured product divisions. In the non-manufacturing groups, mining, highway construction and retail trade were quieter. Activity was greater, howover, in ?nesing, trauspontstion, building and wholesale trade. On the whole the changes in the non-inanufacturing classes were not partioularly marked.

## Prairie Provinces.- Improvement in employment was noted at Sept. 1 in Manitoba

 and Aloerta, but there was is Ueeline far Saskatchewan. In that provirice and in Manitoba, the general changes were slight. The gain in Alberta amounted to 1.2 r .0. On the whole, there was a rise of $0.5 \mathrm{p} . \mathrm{c}$. in the employment afforded by 2,609 leading firms in the major non-agricultural industries in the Prairie Area, where the payroll disbursements were also higher, having increased by 1.9 p.c. since hug. 1. The per capita weekly earnings of persons employed by the larger establishments rose from $\$ 41.53$ at that date, to $\$ 42.09$ at the date under review. At Sept. 1,1947 , the average emplovee of the co-operating firms had received $\$ 36.39$. In the last 12 months, the index of industrial employment in the Prairie Provinces taken as a unit has advanced by 6.9 p.o., and there ime been of gita of 19.7 poce in the intex of weekly payrolls.Manufacturing in tha Pratris Aroa at. Sept. 1.4048 , was sonembut brisker, on thie whole, than at Aug, 1. The lunber, beverage and clay, glass and stone industries showed rather lowered employment, but thers were moderate gains in the vegetable food, textile and other divisions. The trend was also upward in mining, construction and maintonance, an? trade, while that in logsing, hotols and restaurants, laundrims and dry-cleaning plants and transportanion was cownard. The rejortoc chances in the numbers of employees were small.

British Columbia. - The comoperating estabilshments in British Coiunbia reported moderately large additions to their working forces at Sopt. $l$, when the advance of $1.4 \mathrm{p}, \mathrm{c}$. approximated the average for the time of year. The increase brought the index to 215.5 , a figure which was 3.9 p.0. above the Sept. 1, 194? indax of 20?.5, previously the maximum for that date in the record of 28 years.

Slight improvement as compared with a month earlier was inuicated, on the whole, in manufacturing at the date under review. The movement was favourable in food, textile and lumber plants, but there were considerable losses in iron and stoe? factories. Mining was also quieter among the non-manufacturing classes, whils logeing, transportation, construction and trade affordad nute ampluyment.

The weekly payrolls disbursed by the 8,355 roporting ampicyars at the date unce: review exceeded by 2.7 p.c. their expenditures in salaries and wages at Aug. 1. The latest per capita figure was $\$ 43.50$, as compared with $\$ 42.93$ at the becinnin of Aupust; the mean at Sept. 1. 1947, had been $\$ 39.34$. In the last year, the iaces of poyyolid aka risen by 14.0 p.0., and that of simploymant, Dy 5.93 .0 .

## - 15 - <br> EMPLOYMENT AND PAYROLLS AS REPORTED BY LEADING ESTABLISHTENTS ${ }^{1 /}$ IN THE LARGER CITIES.

The following paragraphs deal briefly with the situation reported at Sept. 1 by employers in cities having populations of 35,000 persons and over.

Halifax. - Employment in leading establishments in Halifax at the bepinning of September showed a moderate increase. There were rather small gains in transportation, construction and communications. Manufacturing was quieter, notably in the iron and steel division. Other branches of business reported only minor changes. A general gain of $0.6 \mathrm{p.c}$. . in the working forces of the 267 larger firms from which data were received was accompanied by an advance of $0.5 \mathrm{p} . \mathrm{c}$ 。 in their weekly salaries and wapes as compared with Aug. 1. The per capita earnings of their emplovees were then $\$ 34.26$, while the Sept. 1 figure was $\$ 34.22$. The averape reported a year earlier was $\$ 32.73$. In the last 12 months, the index of weekly salaries and wages has risen by 5.5 p.c.. and the index number of employment, by one p.c.

Saint John.- There was expansion in industrial activity in Saint John at Sept. 1 . when transportation and construction reported improvement. Manufacturing, however, was quieter; within that category, the trend was unfavourable in lumber, iron and steel and some other classes. The 191 firms in the major industrial groups furnishing data at Sept. 1 indicated an increase of 2.4 poc. in their working forces as compared with a month earlier, accompanied by a loss of 0,9 p.c. in their weekly salaries and wages. Largely as a result of shorter working hours in certain catogories, the peneral average of waekly earnings fell from $\$ 33.55$ at that date, to $\$ 32.46$ at the beginninf of September. The figure was then 4.8 p.c. above that of $\$ 30.96$ indicated at Sept. 1, 1947. Since then, the index of emploument in Saint John has declined by 3.5 p.c., but the index of weekly payrolls has risen by 1.9 p.c.

Montreal. - Industrial employment as reported by leading establishments in Montreal was in greater volume at Sept. 1 than at Aug. 1. Widespread improvement was noted in manufacturing. There were large increases in textile and iron and steel plants, with smaller advances in leather, food, printing and publishing, paper product, tobacco, chemical, non-ferrous metal and miscellaneous manufactured products. Trade also afforded more employment. The trend was downard in construction and transportation, while the changes in the remaining industries covered in the monthly surveys were slipht.

Statistics were tabulated from 2,910 of the larger emplovers in Montreal, whose working forces at Sept. 1 were 1.6 p.c. greater than at the beginning of August. The weekly salaries and wages of these establishments rose by 1.4 p.c. There was, however, a moderate seasonal decline in the per capita earnings of their emplovees, which fell from $\$ 39.40$ at Auge 1 to $\$ 39.30$ in Sept. 1, when the figure was considerably higher than the Sept. 1, 1947, mean of $\$ 35.34$. The latest index of employment, at 185.6 , exceeded by 3.2 p.c. that of 179.0 indicated 12 months ago, while the payroll figure has mounted by 14.8 p.c. in the year.

Quebec.- The trend of employment in Quebec continued upward, according to information from 350 of the leading emplovers who had increased their personnel by 1.2 p.c. from Aug. 1 to Sept. 1. Their weekly salaries and wages were higher by 1.1 p.c. The average earnings of members of their staffs were $\$ 33.97$, as compared with $\$ 34.02$ at Alug. 1, and $\$ 32.01$ at Sept. 1, 1947. Heightened activity was noted at the date under review in manufacturing, notably in leather, tobacco and iron and steel-using works, and in trade. The changes indicated in other industries were small. The latest index of employment stood at 204.6 , as compared with 202.1 at Aug. 1 , and 199.6 at Seot. 1, 1947. In the latter comparison, there was an advance of 2.5 p.c., accompanied by that of 3.4 p.c. in the index of payrolls in the 12 months.

Sherbrooke.- There was a slight increase in recorded employment in Sherbrooke at Sept. 1, when the personnel of the 119 larger firms furnishing data was one p.c. higher than at Aug. 1. The weekly salaries and wages paid by these employers advanced by 0.1 p.c. The latest average earnings of their employees stood at $\$ 32.38$, lower than the per capita figure of \$32.67 at Aug. 1, 1948, but higher than that of $\$ 30.45$ at Sept. 1, 1947. In the last 12 months, the index numbers of employment and payrolls have risen by $5.9 \mathrm{p} . \mathrm{co}$, and $12.8 \mathrm{p} . \mathrm{c}$. respectively.

Three Rivers. A further but small decline in employment was noted in Three Rivers at Sept. 1. Manufacturing and construction showed some improvement, while transportation and trade were quieter. Information was supplied by 106 representative establishments in the major industrial groups, in which the staffs had fallen by 0.5 p.c. since Aug. 1. Their weekly salaries and wages were lower by 0.2 p.c., but the average earnings per emplovee were higher, standing at $\$ 41,19$, as compared with $\$ 41.08$ at Aug. 1, 1948, and $\$ 36.46$ at Sept. 1 of last year. In that comparison, there was little change in the index number of employment, but the index of weekly payrolls showed an advance of 13.5 poc.

Toronto. Employment in Toronto showed a moderately upward movement at Sept. 1. when the working forces of the 2,713 leading firms in the eight major industrial groups were higher by 1.1 p.c. than at Aug. 1. Considerable improvement was indicated in manufacturing, in which there were large gains in vegetable food processing, with increases on a smaller scale in paper products, printing and publishing, textile, clay, glass and stone, iron and steel, non-ferrous metal and miscellaneous manufactured product factories. On the other hand, construction and retail trade released employees. The eeneral changes in the remaining industries included in the monthly surveys were small.

The weekly salaries and wages reported by the employers furnishing data at Sept. 1 were greater by 0.7 p.c. than at Aug. 1, while as compared with Sept. 1, 1947, there was a rise of 14.7 p.c. in the index of payrolls. This gain was accompanied by that of four p.c. in the index number of employment, which stood at 198.6 at the date under review. The weekly earnings averaged \$41.32 at Sept. 1, as compared with $\$ 41.46$ at Aug. 1, 1947, and \$37.50 at Sept. 1. 1947.

Ottawa. - There was a slight recession in industrial employment in manufacturing in Ottawa at the first of September, when trade was rather busier than at Aug. 1 . The changes in the remaining industrial divisions for which data are available were small. The 323 leading firms from which retums were received reported an increase of 0.8 p.c. in the number of their employees. The salaries and wages disbursed by these establishments were higher by one poc. The average per employee was $\$ 35.12$, as compared with $\$ 35.05$ at Aug。1, and \$32.25 at Sept. 1, 1947.

The index of industrial employment in Ottawa, at 198.6 , was 8.1 p.c. above that of 183.8 at Sept. 1, 1947, since when there has been an increase of 16.7 p.c. in the index of peyrolls.

Hamiltono- Activity in leading industries in Hamilton showed an upward movement at the beginning of September, according to statistics compiled from 455 of the larger establishments whose staffs were higher by 0.4 poc. than at Aug. 1。 Partly as a result of loss of working time during unusually hot weather in the week of Sept. 1, however, the weekly payrolls disbursed by these employers fell by 2.3 p.c. The per capita earnings of their emnloyees declined from $\$ 43.78$ at Aug. 1 , to $\$ 42.60$ at the beginning of September, but the figure exceeded the mean of $\$ 37.83$ indicated in the same period of last year. The latest index of employment, at 198.4, showed an increase of 7.2 p.c. over the Sept. 1. 1947. figure of 185.1, while that of payrolls has risen by 20.3 p.c. in the 12 months.
in manufacturing，transportation and constructions within the manufacturing group， there were losses in textile，beverage and electrical apparatus plants，but heightened activity was indicated in the vegetable food，clay，glass and stone，and iron and steel divisions．

Windsor－－Little change in the general level of employment was reported by leadirg Industrialists in Windsor at Sept． 1 ，when the working forces of the 281 co－operating employers showed a decline of 0.2 p．c．from Aug．1．The sum paid their workers in weekly salaries and wages，however，were higher by 3.2 p．c．，the gain being due in part to higher wage rates in certain industries．The average earnings at Sept．I amounted to $\$ 49.03$ ，as compared with $\$ 47.42$ a month earlier．The Sept． 1 ， 1947，figure was $\$ 43.44$.

On the whole，employment in manufacturing was quieter than at Aug．is there were declines in food－processing，but modorately increased activity was noted in iron and steel plants．Construction also showed slight improvement．The variations in the remaining industries were small．

The latest index of employment，at 283.5 ，was higher by 2.6 p．c．than that of 276.2 at the beginning of September，1947．Since then，the index number of payrolls has risen by 16.7 p． 6

Fort William－Port Arthur－Data received from 144 representative firms in Fort William and Fort Arthur showed a slight improvement in employment as compared with Aug。1，their working forces increasing by 0.7 p．c．On the other hand，their weekly salaries and wages declined by 0.3 p．c．，due to reduced working hours in certain industries．The average earnings of their employees fell from \＄44．05 at Aug．1，to $\$ 43.60$ at the date under review，as compared with $\$ 40.41$ at Septo 1 of last year．Since then，the index of industrial employment has risen by 4.7 p．c．， and that of payrolls，by 13.5 p．c．There were small reductions in activity at the date under review as compared with Aug．1，1948，in manufacturing and construction， but transportation，hotels and restaurants and trade afforded rather more employment．

London．：－The working forces of the 297 larger establishments in the leading Industries co－operating in the Sept．I survey of employment and payrolis in London were higher by 1.3 poc．than at Aug。1，while their weekly salarles and wages rose by 2.3 p．c．in the month．The average per emplovee advanced from $\$ 38.93$ at Aug．1， to $\$ 39.49$ at Sept．1，when it also exceeded the figure of $\$ 34.33$ at Sept．1， 1947. There was improvement in the situation at the date under review in manufacturing， thare beinp moderate gains in lumber，electrical apparatus and iron and steel plants． Construction and trade also afforded more employment．The index of employment in London，standing at 203．1，has shown a gain of $2.5 \mathrm{p} . \mathrm{c}$ 。 in the last year，accompanied by that of 18.4 poc．in the reported payrolls．

Kitchener－Waterloo－The level of industrial employment in the Kitchener and Water 100 Area at the beginning of September was unchanged from Aug．1，according to statistics tabulated from 192 loading employers．Their payrolls，however，were higher，rising by 0.8 p．c．in the month．The average per emplovee was \＄39．15，as compared with $\$ 38.83$ at Aug。1，and $\$ 36.65$ at the beginning of September，1947．In the latter comparison，there was a decrease of 0.5 poc．in the index of employment， but that of payrolls was higher by 5.8 p．c．

Reduced activity was indicated in rubber factories at the date under review as compared with Auge 1．Rather small grins，however，were roted in vegetable fond and Aron atal steal jasate．The variations in other fudustwes whe stight．

Wimiper－There was a minor advance in the indox namber of enmoymert in the magor industrial groups in Winnipeg at Sopt．1，when the figure was higher by 0.4 p．c． than at Aug．1．There was rather widespread but moderate expansion in manufacturing，
notably in animal food and textile plants. On the other hand, the non-manufacturing industries were quieter, small losses being noted in transportation, hotels and restaurants and retail trade. The weekly disbursements of leading firms in salaries and wages rose by $1.7 \mathrm{p} . \mathrm{c}$. in the month. The latest figure of per capita earnings was also higher, at $\$ 38.00$, as compared with $\$ 37.51$ at aug. 1 , and $\$ 33.63$ at Sept. 1, 1947.

The Sept. 1 index number of employment, at 163.4 , was 3.8 p.c. higher than that of 157.4 at the same date of last year; since then, the index of payrolls in Winnipeg has risen by 17 p.c.

Regina.- The general trend of industrial employment in Regina was upward at Sept. 1, when gains were reported in trade, but there were small losses in manufacturing and a few other classes. The 181 larger ostablishments from which data ware received increased their workers by 0.9 p.c. as compared with the beginning of August. Their payments in weekly salaries and wages also advanced, rising by two p.c. The average earnings per person in recorded employment stood at $\$ 35.94$ at the former and $\$ 36.31$ at the latter date, as compared with \$32.39 at the beginning of September in 1947. In the year, the index of employment shows an increase of lo? pec.. and that of payrolls, of 10.6 p.c.

Saskatoon.- Industrial employment as reported by leading firms in Saskatoon showed a decrease at the beginning of September, there being a reduction of 1.5 p.c. in their personnel, together with a loss of 0.4 p.c. in their weekly salaries and wages as compared with Aug. 1. The average earnings of their employees, however, were higher, rising from $\$ 35.32$ a month earlier to $\$ 35.74$ at Sept. 1 , as compared with $\$ 33.28$ at that date in 1947. In the latter comparison, there was a decline of 4.1 p.c. in the index number of employment, but the index of payrolls was higher by 3.7 p.c. Little change on the whole ms indicated in manufacturing at Sept. 1 as compared with Aug. 1, 1943, valie Jensoraction, hotels and restaumivits rive trabe showed some curtailmeit.

Calgary - The lew 1 of employment vepurted by 31 ? leacing firms in Culgary way rather lower at Sept. I than at the beginning of August, there being a loss of 0.3 p.c. in their staffs in the month. The weekly salaries and wages which they disbursed, however, were higher by $0.8 \mathrm{p} . \mathrm{c}$. The average earnings of their employess advanced from $\$ 39.11$ at the beginning of August, to $\$ 39.52$ at the date under review, as compared with $\$ 34.67$ at Sept. 1, 1947 . In the last 12 months, the index of
 payrolls.

Activity secinnd in marnacturing and also in construction and cortain other non-manufacturing groups at the first of September as compared with Aug. 1 , but there was an increase in employment in trading establishments.

Edmonton.- The 266 representative emplovers furnishing data on employment ind payrolls in Edmonton at Sept. 1 reporte ${ }^{\text {gains }} 0$ of 0.6 p.c. in their personnel and two p.c. in their weekly payrolls as compared with Aug. 1. The salaries and wagos of their employees averaged $\$ 39.04$. A month earlier, the per capita figure was $\$ 38.51$, and that at Sept. 1, 1947, $\$ 33.07$. Employment in manufacturing was somerhnt quieter at the date under review, particularly in the lumber and textile divisions, Firms in the communications, transportation and storage, and construction groups, however, reported improvement over Aug. I. In the last year, the index number employment in Edmonton has advanced by 16.4 p.o., wad theno has been a gain of 29.9 p.c. in the index number of payrolis.

Vancouver - The general movement in inecobed employuant in Vancouver was favourable at the beginning of September. Expansion was indicated in manufacturiris. trunsporcation, oonstadotion and crade. Within ths as rotwanej, there mas curtailadet
in the iron and steel division, but employment increased in lumber mills and food factories.

The employees of the 1,033 larger firms co-operating in the monthly survey increased by 1.4 p.c. at Sept. 1 as compared with Aug. 1 , since when their weekly salaries and wages had risen by three p.c. The per capita eamings were higher, standing at $\$ 41.01$ at the date under review, as compared with $\$ 40.39$ at Aug. 1 ; the mean at Sept. 1, 1947, was $\$ 36.81$. In the year, the index of employment had advanced by 4.7 p.c., to 240.2 , and that of payrolls, by 16.4 p.c.

Victoria. - The 218 leading establishments in Victoria from which monthly data on employment and payrolls were received reported a gain of $0.8 \mathrm{p}, \mathrm{c}$. in the number of their workers at Sept. 1, with an increase of 1.1 p.c. In their weekly payrolls as compared with Aug. 1. The average eamings of their emplovees rose from $\$ 38.37$ at that date, to $\$ 38.48$ at Sept. 1 , as compared with $\$ 35.67$ twelve months earlier. Since then, the index number of employment has fallen by $3.4 \mathrm{p} . \mathrm{c}$., but there has been a rise of $3.9 \mathrm{p} . \mathrm{c}$. in the index of payrolls.

There was a slight decline in employment in manufacturing at the date under review as compared with Aug. 1. Transportation and hotels, on the other hand, afforded rather more employment.

## TABLES.

The latest statistics of employment and payrolls are summarized in Table A on page 2, while Tables 1 to 5 at the end of this report contain the latest reported data of employment and payrolls, together with index numbers as at Aug. 1 and Sept. 1, 1948, and Sept. 1, 1947. In these tables, the index numbers of employment, calculated on their original base, 1926=100, have been converted to June 1, 1941, for comparison with the data of eamings. For all general purposes, apart from comparison with the payroll statistics, howsver, the index numbers of employment in Tables 6 to 11 , based on $1926=100$, should be used.

Table $C$ on page 6 summarizes for the provinces, the cities and the major industrial divisions, the latest statistics of employment, showing the numbers and proportions of male and female workers reported at Sept. 1 , with comparisons from enrlier surveys; in this table, the provincial and city figures given are those for the nine leading industrias, including the employees reported in financial institutions, excluded in most cases from the data given in the table on page 2. Trble 12 shows the sex distribution in a considerable list of industries in the Cominion as a whole at the date under review, with comparative statistics as at Aus. 1, 1943, arid Septen 1,1947 ,

Table I. Fimber of Peraons Bmploywd by the Reporting Establishments in Various Industries and their Aggregate and Average Feekly 8alerios and Wages at Sept. 1, 1948, Together with Index Numbers of Boploymont and Payrolls, with Comparisons at Aug. 1, 1948 and Sept. I, 1947.
(The latest figurse are aubjact to revision).
