CHARTI

## EMPLOYMENT AND PAYROLLS, OCTOBER, 1951.

## SUMOARY.

The trend of industrial employment continued moderately upward at Oct. 1 , when the index number showed its seventh successive rise. The increase as compared with Sept. 1 amounted to $0.5 \mathrm{p} . \mathrm{c}$., and that over Oct. 1, 1950, to $5.2 \mathrm{p} . \mathrm{c}$. The latter advance was the smallest recorded to date in the present year in the 12 months comparison. There was improvement in the situation for workers of both sexes as compared with Sept. 1, but the gain in employment among men was very slight, at 0.1 p.c. The number of women rose by 1.7 p.c. As compared with Oct. 1 of last year, however, there was a larger inerease among men, whose number rose by 6.0 p.c., while the reported total of women was higher by $2.5 \mathrm{p} . \mathrm{c}$.

Accompanying the rather small advance in employment ganerally at the date under review was a gain of $2.2 \mathrm{p} . \mathrm{c}$. in the index of payrolls, which like the employment figure reached a new high point at the date under review. Widely distributed increases in wage and salary rates and the settlement of several important industrial disputes contributed to greater payroll expenditures. The latest figure of average weokly wages and salaries was $1.7 \mathrm{p} . \mathrm{c}$. higher than at Sept. 1 , and 12.3 p.c. above its level at Oct. 1, 1950.

Moderately heightened industrial activity was indicated in all provinces except Prince Edward Island and the Prairie Area. The most noteworthy gains in employment were those of 1.2 p.c. in British Columbis and 1.3 p.c. in Quebeo. Eighteen of the cities for which data are segregated showed curtailment, while improvement was reported in 13 of these metropolitan areas. Industrially, there were declines in employment in manufacturing, public utility operation, construction, transportation, and hotels and restaurants; the losses in those industries were 0.1 p.c., 1.7 p.c., 0.7 p.c., 1.3 p.c. and 3.0 p.c., respoctively. Logeing camps increased their staffs by $17.5 \mathrm{p} \cdot \mathrm{c}_{\mathrm{A}}$, in a seasonal movement. The index number in mining rose by 0.5 p.c., in finance, by 0.1 p.c., and in trade, by 2.7 p.c.

Changes in Employment for Kon and Women.- As already stated, the improvement in employment reported at the beginning of October extended to both sexes, but the general increase among women was larger, in number and in proportion; this was a result of changes taking place in the month in the industrial distribution of the workers covered by the survey. As compared with Sept. 1, employment for women rose by 1.7 p.c., and for men by only $0.1 \mathrm{p} . \mathrm{c}$. Large additions were made to the staffs of women in the fruit and vegetable caming and preserving industry, and in trade, where there were gains of $13.4 \mathrm{p} . \mathrm{c}$. and $6.5 \mathrm{p} . \mathrm{c}$. , respectively. On the other hand, there were losses in the textile and garment industries. With the settlement of industrial disputes in tobacco factories, the number of female employees rose by 77 p.c. and that of men, by 51 p.c. Among the latter sex,marked expansion was reported in logging. There were comparatively small increases in mining, trade and some other classes. In transportation and construotion, however, there were declines.

Although the latest proportion of women is the lowest for Oct. I in the period for which statistics are available, the number reported was some $2.5 \mathrm{p} . \mathrm{c}$.

NOTE: THE LATEST FIGURES THROUGHOUT THIS REPORT ARE SUBJECT TO REVISION.

1/Includes wood products, iron and steel products, transportation equipment, non-forrous motal products, electrical apperatus and supplies and non-matallic mineral producte. The non-durable group includes the remaining manufeoturing Industries.
2/Minly hotels, restausants, laundries, dry-cleaning plante and businase and recreational sorvices.
higher than at the same date 12 months earlier. It is also worthy of note that in spite of the considerable drop from 1944 to 1951 in the ratio of women, the number reported at Oct. I In the present year is only about $2.6 \mathrm{p} . \mathrm{c}$. lower than at the war time poak. In the interval, the number of men has risen by some $30 \mathrm{p.c.s}$ the general index showed an increase of $21.4 \mathrm{p} . \mathrm{c}$.

The following table shows the proportion of women on the payrolls of the larger establishments in the major industrial divisions at Oct. 1 in the decade:

$$
\begin{array}{lll}
1942-23.5 & 1946-23.2 & 1950-22.3 \\
1943-26.2 & 1947-22.0 & 1951-21.7 \\
1944-27.1 & 1948-21.9 & \\
1945-25.3 & 1949-22.4 &
\end{array}
$$

Table $D$ gives the proportions of women in a number of areas at Oct. I in the latter part of the war, in the early post war period, in 1950 and 1951, with changes in the numbers reported at Oct. 1 of the present yoar as compared with 12 months ago. The provincial and city variations in the percentages at any given date mainly reflect differences in the industrial distributions. In all provinces, there have been declines since the war years in the proportions of women. In most cases, the ratios at Oct. I have varied little in recent years. The gains in 1951 over 1950 in the reported numbers of women in 8 of the older profinces were moderate, while Manitoba employers showed a small decline in the 12 months.

In almost all of the cities for which comparison can be made the proportions of women were lower at Oct. I in more recent years than in 1944 and the immodiate post war period. In most of the centres listed in Table $D$, the numbers of women have increased in the last 12 months; reductions in that comparison, however, re indicated in 8 metropolitan areas - Halifax, Sherbrooke, St, Catharines, Brantford, London, Windsor, Winnipeg and Regina. In only 2 of these, (Lond on and Windsor), were the general index numbers at Oct. 1, 1951, lower than at Oct. 1, 1950, variations in the levels of activity in different industries in the other centres just named having had an adverse effect only upon amployment for momen.

Changes in the Major Industrial Divisions.- There was a minor decline in omployment generally in manufacturing at Oct. 1. The movement in the autumn of preceding years of the record has usually been favourable, although curtailment has been indicated at the beginning of October on several oocasions. At 193.9, the most recent index number was 0.1 p.c. lower than at Sept. 1 , but was 4.5 p.0. above its level 12 months earlier. The index of payrolls rose by 1.6 p.c. from Sept. 1, to a now all-time maximum, exceeding the Oct. 1 , 1950 , figure by 17.7 p.c. The per capita earnings also reached a now peak at the date under review.

Seasonal actifity in certain branches of the non-durable manufactured goods division resulted in a gain of $0.7 \mathrm{p} . \mathrm{c}$. in the index number of employment in that class. The payrolls advanced by 2.0 p.c.; the settlement of major industrial disputes, the payment of higher wage and salary rates, and increased cost-of-living bonuses contributed to the gain. These factors were largely responsible for a rise of 1.2 p.c. in the weekly wages and salaries reported in the heavy manufactured goods division, in spite of a loss of 0.9 p.c. in employment. In both categories, the average weekly earnings reached new all-time high levels.

Employment in vegetable food canning and preserving rose from Sept. I by 27.4 p.ce, a gain which substentially exceeded the average for the time of year;

1/ Includea (1) Poreatry (ohiofly logging), (2) Mining (inoluding milling), quarrying and oil wells, (3) Mamufaoturing, (4) Construotion, (5) Transportation, storage and communioutions, (6) Publin utility opurations, (7) Trade, (8) Pinance, insuranco and real estate and (9) Servioes, (mainly hotels, restaurants, laundries, dry oloaning plants, business and recrastional sorvioos.
there was an increase of $5 \mathrm{p} . \mathrm{c}$. in the miscellaneous foods group. Largely due to the settlement of important labour-management disputes, the index in tobacco manufacturing rose by $64.4 \mathrm{p} . \mathrm{c}$. Activity was moderately higher in printing and publishing. On the other hand, employment in fish canning and preserving declined by 10.8 p.c.e in a seasonal movement. The baking, malt liquor, soft drink, rubber, leather, textile, (notably woollen and rayon, yylon and silk), knittine, garment, pulp and paper, petrolem and chemical groups were also slacker. In some cases, the lossos in employment were seasonal.

In the durgble goods industries, widespread reductions in personnel were indicated. Saw and planing mills reported the release of $4 \mathrm{p} . \mathrm{c}$. of their working forces, a seasonal loss: furniture and other wood producte also showed decreases. There was a decline of $3.4 \mathrm{p} . \mathrm{c}$. in the wood produot group as a whole. Contractions in activity were indicated in the mafacture of motor vehicles and parts and accessories, but considerable improvement was noted in aircraft and shipbuilding and repairing plants. Employment in machinery works was in much greater volune, partly due to the settlement of industrial disputes in offect a month earlier. Agricultural implements, hardware and tools, primary iron and steel and some other classes in the iron and steel group reported reduced working forces. This was also the case in the non-ferrous metal division, in which smelting and refining. aluminum products and other branches were quieter. Electrical apparatus plants released employess, for the third month in succession.

In the non-manufacturing classes, there was an increase of $17.5 \mathrm{p} . \mathrm{c}$. in logeing, in which the gain approximated that noted at Oct. 1, 1950, but was below average for the time of year. Gold mining, which had been seriously affected by industrial disputes, showed a gain of 4.2 p.c., but a moderate decline in employment took place in the extraction of base metals, and of miscellaneous non-metallic minerals. Coal mining was rather more active. There were contractions in public utility operation, steam railways, commnication, building and highway construction and hotels and restaurants; in some cases, the losses were seasonal. There was a considerable seasonal expansion in employment in trade, in which the index reached a new all-time maximum for the time of year.

Payrolls.- The weokly payrolls reported in most areas were decidedly higher at Oct. 1 than at Sept. 1. Provincially, the exceptions were Prince Edmard Island, Manitoba and Saskatchewan, where the index numbers fractionally declined. The trends mere downward in Three Rivers, Galt-Preston, Sarmia, Windsor, Saskatoon and Victoria, but higher disbursements were reported in the remaining 25 metropolitan areas for which data are segregated. Industrially, there were numerous inoreases in the wages and salaries reported. Among the major groups, the advances ranged from 1.1 p.e. in the public utility operation group and 1.6 p.c. in manufaoturing, to $4.1 \mathrm{p} . \mathrm{c}$. in mining and $23.1 \mathrm{p} . \mathrm{c}$. in logging.

The general index number of payrolls at Oct. 1, a new paak figure, was 18 p.c. higher than at Oct. 1, 1950. There were very general increases in the 12 months. Geographically, an exception was Windsor, where a decline of 2.3 p.c. was indicated in the woekly wages and salaries distributed at the date under review as compared with a year earlier. Firms in all major industries reported larger totals in that comparison. In only 7 of the industrial groups and sub-groups for which data are published in Table 4 were the weokly payrolls lower at Oct. 1, 1951; these were motor vehicles, tobacco, leather footwear and other leather products, fur products, hoadrear, and heating and cooking appliancos.

Par Capita Earnings.- There was a substantial increase in the general

[^0]average of weokly wages and salaries at the first of October, when the figure was 87 cents higher than at Sept. 1, and $\$ 5.55$ above its level at Oct. 1, 1950. On the whole, the changes which took place in the month in the industrial distribution of workers on the staffs of the larger employers were not favourable to a higher general average, but a factor of greater weight was the upward adjustment of wage and salary rates in numerous industries and establishments. In some cases, the settlement of industrial disputes also had a buoyant offect upon the per capita figure.

Higher average weekly earnings were reported as compared with Sept. 1 in all provinces, most metropolitan areas, and all major industrial divisions. The trend was also upward in all, or noarly all industrial groups and sub-groups for which statistics are published. The average wages and salaries in practically all cases were also higher than at Oct. I of last year, or any earlier period.

Provincial Changes in Non-Agricultural Employmant. - Industrial activity in Nova Scotia. New Brunswick, Quebec, Ontario and British Colunbia reached higher levels at Oct. 1 than at Sept. 1. The trend in the Prairie Provinces was contraseasonally downward, there being losses of $1.2 \mathrm{p} . \mathrm{ce}_{\mathrm{e}} .1 .5 \mathrm{p} . \mathrm{c}_{\text {. and }} 1.9 \mathrm{p} . \mathrm{c}$. in Manitoba, Saskatchewan and Alberta, respectively. The general gains in employment in the provinces which showed improvement were moderate, those of 1.2 p.c. in British Columbia and $1.3 \mathrm{p} . \mathrm{c}$. in Quaboc being most noteworthy. The index numbers of employment in all areas except Prince Edward Is land were higher than at Oct. 1, 1950; the largest advances were those of 7.0 p.c. In Quebec, and $8.8 \mathrm{p.c}$. . in Alberta.

The disbursements of leading industrial employers in weekly wages and salaries rose at Oct. 1 as compared with Sept. I in all provinces except Prince Edward Island, Manitoba and Saskatchewan, where the index numbers declined fractionally. The return to more normal conditions following the settlement of industrial disputes in some areas, and upward adjustments in wage and salary rates in numerous cases, were factors contributing to the higher payroll expenditures. The gains in the reported payrolls ranged from 1.1 p.c. in Alberta, to over 3 p.c. in Nova Scotia, Now Brunswick and British Columbia. In most areas, the latest indexes were the highest in the record.

The average weekly earnings of wage-earners and salaried personnel reported at the date under review showed substantial increases in all provinoes as compared with Sept. 1; the figures were also higher than at any earlier dato. The factors mentioned above in comection with the index numbers of payrolls were largely responsible for the latest advanoes in the provincial per capita figures.

Manufacturing showed improvement at Oct. 1 in Quebec, the index number rising by 1.1 p.c. Moderate 10 sses were recorded in the remaining provinces, that of 4.3 p.c. in Saskatchewan being largest. In all provinces, there were decines in numerous industries, although in most cases, the losses were not particularly large.

The trends among the non-manufacturing divisions were mixed. Logging in New Brunswick, Quebec, Ontario and British Columbia reported considerable improvement, largely seasonal in character. Mining was generally quieter in Quebeo, Manitoba and British Columbia. In Ontario, the index mounted by 4.1 p.c. The gains in the other provinces were minor. Construction in Quebec and the 4 Westerm Provinces released employees. There was an increase of $7.8 \mathrm{p} . \mathrm{c}$. in that industry

| Victoria | 24.4 | 25.4 | 26.1 | 23.9 | 23.2 | +5.5 |

in Nova Scotia, with insignificant changes in the remaining provinces. Only in New Brunswick and Manitoba was the movement favourable in transportation, storage and communications. Employment in trade was at higher level than at Sept. 1 in 211 provinces except Prince Edward Island. There were very general decilnes in hotels and restaurants and laundries and dry-cleaning establishments.

Changes in Employment in Newfoundland.- Heightenod activity was noted in employment in logging at Oct. 1 as compared with a month earlier. Manufacturing released a few employees, and there were also losses in transportation, storage and communication, and pablic utility operation. Small advances were made in construction, trade and service, while there was practically no change on the whole in the mining and finance, insurance and real gstate divisions.

A considerable increase in the weokly payrolls was reported in mining, which had been affected by labour-management disputes a month earlier. Smaller gains took place in trade, the service industries for which data are available, construction and logging. Manufacturing showed a falling-off of 1.9 p.c. The average weekly wages and salaries in that division were also lower, partly due to changes in the industrial distribution of employeos, and partly to reduced working hours in some branches. In the non-manufacturing classes, however, the average earnings were generally higher than at Sept. 1.

Changes in Industrial Employment in the Cities. - The general trend of employment in 18 of the 31 cities for which data are segregated was downmard; the losses in this group ranged from an insignificant decine in ottawa-Hull and several other centres, to $5.3 \mathrm{p} . \mathrm{c}$. In Windsor and $6.2 \mathrm{p} . \mathrm{c}$. in Sarnia, where curtailment due to inventory-taking in plants manufacturing motor vehicle, parts and accessories was mainly responsible for the considerable reduction. The falling-off in Sydney largely resulted from industrial disputes, which were also a factor in Vancouver, and some other centres.

Among the cities showing improvement, employment rose by proportions varying between 0.1 p.c. in Three Rivers and Hamilton, to 3.3 p.c. in Niagara Falls and 3.8 p.c. In Saint John. There was a rise of 1.2 p.c. in Montreal, and 0.8 p.c. in Toronto. In the latter, moderately increased activity was indicated in manufacturing, construction, trade and the servics industries covered by the surveys. The settlement of industrial disputes in the tobacco industry and expansion in employment in aircraft factories and in trade contributed materially to the gain in Montreal.

Except in Three Rivers, Galt-Preston, Sarnia, Windsor, Saskatoon and Victoria, the payroll disbursenents reported by the larger firms at Oct. 1 were higher than in the weok of Sept. 1. Reducod working hours (due in some cases to labour-management disputes), were responsible for part of the losses. In the remaining centres isted in Tables $A$ and $C$, the increases in the weokly wages and salaries ranged from 0.5 p.c. in Winnipeg and 0.6 p.c. in London, to $7.3 \mathrm{p} . \mathrm{c}$. in Niagara Falls, 7.5 pec. in Fort William-Port Arthur, and 8.5 p.c. in Saint John.

The average weokly earnings of workers on the staffs of the larger firms at Oct. I were lower in Three Rivers and Victoria than at Sept. 1. In the remaining metropolitan areas for which data are segregated, the per capita wages and salaries were higher. In all centres, the latest figures exceeded those indicated 12 months earlier.

## EXPLANATORY NOTES.

Geners.-" The monthly survevs of emplownent and weokly payrolls relate to the following Industries: (i) forsstry (mainly logging), (2) mining (including miling), quarrying and oil wils, (3) manuracturing, (4) construction, (5) transportation, storage and commuloations, (6) public utility operations, (7) trade, (8) finance, insurance ant real estate and (g) specifled branohes of the servioe industry, chiafly hotsls, restaurants, laundries, dry cleaning plants, recreationsl and business serfices. For reasons of econory in time and money in collecting and processing the statistics, the surveys do not covar firms usually employing less than 15 persons; oatablishments reducing their staffs bolow this minimus re not nocessarily removed from the mailing list. Data are requostod for all classes of omployees, irrespective of their functions in the business; statisticis for the owners are not included. smployers operating in two or more ilnes of business, or in different provinces or citios, are asked to furnish separsto monthly returns for their ostablishmonte in the different units.

1. Coverage.- Although the monthly ourveys are Nirtually limited to establishmente having 15 omployees or more, arge and relatively oven representation of employment is secured from the rarious provincos and the cities for which data aro segrogated. Howevor, a rathor umeven though still lerge industrisi representation is obtainod, dopending upon the organisation of particular industries in large or amell units of operation. Complete information rospooting the dietribution of the working populatinn is avilable only at the dates of the Decennial Census. Whe distribution of the persons employed at Juno 2. 1941, by the firms co-oporating in the monthly survey, in caparison with the distribution of the wege-oarners and salaried omplovees entwerated in the Consub of June 1,1941 , was discussed in the 1944 Annual Roview of fimploymont.

Ther is stondy growth in the number of firme roporting to the monthly wirwe, particularly in the industries in which the coverage is low; steps takon to guard against an upward bias in statistios due to this factor are outined later in Section 5. On the bais of areilable miterial, it in ostimated that the coverage in the varlous industries now ranges from about 58 p.c. in the hotol-and-rostaurant and laundry-and-dry-claning group, and $60 \mathrm{p}, \mathrm{c}$. in trade, to $80 \mathrm{me} 94 \mathrm{p}, \mathrm{c}$. in mining and $88 \mathrm{p} \cdot \mathrm{m}$. in manufacturing; the last two proportions are based on the atatistios of the Annual Census of Industry, relating to practically all ostablishonts in the indiosted industries. It is estimated that the composite index of employnent in the major non-agricultural induatrial groups relates to approximately 83 p.c. of the total pald workers in the exne industries throughout Canada. of the total wage-oarnere and salariod employees in all industries, including arciculture, govermment and oducation eorvices, and the other classes oxcluded from the monthly sirveys, as well as persons omployed in the industries which are represented, the coverago of the monthly survey ie estimated at bout 63 p.c.

It is important to note that the etetistios of persons employed, as published in the monthiy bullotins, do not represent estimates of the total numbers ongaged in the spocified areas or industries. but show only the distributions of the men and wowon on the staffs of the comoperating omplovers at the indicated dates, including their full time and part-time employoes.
2. The questionnaire.- The questionnaire used in the monthly surveys ask employers to state the number of full time, part-time and casual wage-oarners and ealeried employmes drawing pay in the last pay periods in the monthe, with their payroli disbureemente in tho same pay periods. Finployoes and oarnings ere grouped ccording to tho duration of their pay perlods, whether these bo monthly, semimonthly, fortnightly, weskly, etc. Gross payrolls are requested, before deductions are made for taxes, unemployment insurance contributione, to. Overtim payments, cost-of - lifing allowanose, comiseions, incentive and production bonusen are also included, es are paymonts for absence with pay in the reportod pay poriods.

The reported disbursements do not include mployers' contributions to unemplovment insuranoe, worken's compensation and othor welfare plans, nor do they include amounts paid for pensions. retirement gratultios, bonuses paid t irregular or infrequent intervals, and varlou other supplementary isbour costs.
3. The Processing. - Statistics of wages and ainries reported for any period exceeding a woek are reduced for tabulation purposes to one wook's proportion of tha totals, the numerators of the fractions used for this purpose boing 5, 6 or 7 days, depending upon the number of days per wok on which the establishments oparated in the pay period; the denominators of the fractions are the number of working days in the different pay periods. For omployees paid at amul or monthly rates, whose arming are not affected by variations in the number of worling daya in the month, fixed proportions are used to reduce the earbings to a weokly basis, irreapective of the length of the onlendar month. The sums resulting frow those parious calculations are then aggregated to give the total amounts which would be paid for services rendered in ono wesk by the employees of the co-operating firme. The workere reported are not necessarily employed for period of a woek by ayy one establiohment. In order to guard egainst dupliontion in the statiotics of omployent where individumis may apoar on the payrolls
of more than one omplover in period of soveral woeks, establishuont are aked to furniah data only for the last pay period in the month for their verious olsees of employees.
4. The Iabulation. The matorial tabulated ach month show the number of workera drawing pay from the establishmonts furnishing roturns, and the weskly earnings of such omplovees, with similar information for the mon and women omployed by the same 91 mo month oariler, and in the basic period (1939). The statistice of the flrat tabulation for each month are preliminary; the re-tabulation of the date on the suoceeding month's tabulation permits the inoorporation of revisions in the materiel originally tabulated. and the inclusion of returna recelved too late for the proliminary tabulation.
5. The Index Number:- Tha index numbers of employment and payrolls represent the percentage relationships betwoen the employees of the establishments currontly furnishing data and their aggregato wookly oarnings, and the corresponding 1939 average figures of these employers. The 1939 flpures of omployment and peyrolle for firms which heve since pone out of businoes are continund in the basic evereges flms or branches oponing for business since 1939 are tabulated with eero bnse flgures. The beste sverages of establinhvents which operated in 1939 but have since been sdded to the mailing list. have beon incorporated in tho bese figures from the date when their co-operation was first obtained. The index numbers of everage weekly wagos and selaries relate the average earminge of persons omployed by the reporting firme at given date to the average earnings of thedr employees in 1939.
6. The Noekly Fages and Salarles.- The tatistics of average weokly earminge result from the division of the ggregate woekly weges and salaries disbursed in the last pay periods in the month by the co-operating estublishonts, by the number of thoir full time and part-timo omployeos in the armo pay periods. The figures represent gross esmings, before deductions are mado for unemploymont insurance contributions, taxes, otc. In addition to basic wage and salaries, the earninge inc lude overtime payments, shift promium, comissions, cost-of $-11 v i n g$, incentive and production bonuses, and other bonuses paid at froquent intorvals. Thoy also include anounts paidemployees sbent on loave with pay during the reportod pay periods, i.e., during veations, tatutory holidays, sick leeve, eto.

The enrnings do not include the valus of free board and lodging and other perquisites, employers' contributions to unemployment insurance, worlonen's compensation and other welfare funds. Also excluded are the cost to employers of certaln other employeo benefits, sich as bonuses pald at irregular or infrequent intermis, (e.g. mnusi bonuses), pensions, retirement gratutities, etc.

The revised flgures of earnings in the monthly bulletins incorporate retroactive pay for one month, corroctions in the material originally tabulated, and data receined too late for inclueion in the first tabuletions for the moet part, such edjustmentsare not mere for more then one month.

## Footnotes.

The following footnotes explain the content of verious induatrial classes idsted in the dotailed tables in this bulletin. In some induetries, the group breakdown is less oxtensive than in the Standerd Industrial Clasifications in those csses, figures for certain cetegories not shown are contained in the group totale.
(a) Alluvial gold and nuriferous quarte mining.
(b) Copper-gold-silver; iron, nickiel-copper; oilver-cobalts silver-lend-zinc, and miscellaneous metal minirg.
(c) Mon-metal mining and quarrving, clay and sand pits.
(d) Cerbonated beverages and wines.
(o) Biscuits and crackers; miscellaneous foods.
(f) Lonther gloves and mittons; tanneries; miscollanoous leather producte.
( E ) Miscellaneous wond products.
(h) Paper boxes and bags; roofing paperes miscellawous paper products.
(1) Housshold, office end store machinery; machine tools; machinery, n.e.e.
(j) Abresive, abostos, hydraulic coment, clay, glass, ilne and gypsua, stone, concreto and miscellanoous non-metallic producte.
(k) Bulldings and structures, other construction, and special trade contractors.
(1) Interurban bus and coach and urban and suburban tranoportation systams.
(m) Includes services incidental to water transportation.
( $n$ ) Ges manufacture and distribution; wator and sanltary services, and other public utilities.
(o) Chiefly recreational and business sorvices.
(p) Intorurban bus and coach and urban and suburban transportation systans s taxi-cab and truck transportation services incidentel to traneportation, and other traneportation.

STATISTKS CANAOA LIERARY

1010514964

[^0]:    I/Includes wood products, iron and steel products, transportation equipment, non-forrous motal products, electrical apparatus and supplies and non-metalifo mineral products. The nondurablo group includes the remaining manuracturing industries.
    a/Mainly hotels, restaurants, laundries, dry cloaning plants and business and recreational services.

[^1]:    For footrotes (a) to (p) ene page II at the ond of this report.

[^2]:    1/Fims usually omploying 15 persons and over. $2 /$ Including transportation equipment.
