FOOTNOTES (end of report)	II

Summary

Industrial employment generally continued to show substantial increases at July 1, when the advance was the fifth in as many months. The gain of 3.4 p.c. brought the index (1949=100) to 123.8, the highest in the record, 7.4 p.c. over the July 1, 1955, figure. The percentage rise from June 1 has rarely been exceeded in any month, and is considerably above the post-war average for the time of year. Weekly payrolls reported by the cooperating establishments were 4.4 p.c. above those at June 1, establishing a new maximum. At 186.9, the payroll index was 13.9 p.c. higher than at July 1, 1955. Weekly wages and salaries averaged \$64.56, also an all-time high. A month earlier, the figure was \$63.93, and 12 months ago, \$60.87.

Improvement was recorded in the period under review for both men and women. Following the seasonal pattern, however, the employment gain from June 1 was relatively larger among men, at 3.8 p.c., as compared with 2.0 p.c. among women. The indexes for workers of the two sexes were 125.1 and 119.5, respectively. A year ago, the figure for men was 116.1 and for women, 112.7. The number of women per 1,000 workers was 218 at July 1, slightly below the proportion of 220 at June 1, 1956, and also at July 1, 1955.

Widely distributed additions to the working forces were reported at the beginning of July. Improvement over June 1 was indicated in all provinces and in 27 of the 32 communities for which data appear in Tables A and B. The most noteworthy area gain was in Quebec, where the index rose by 5.6 p.c. in the month, to a new maximum. Industrially, there was especially marked expansion in forestry, transportation, construction and manufacturing, notably in the non-durable goods group, with smaller but relatively important gains in mining, public utility operation, trade, finance, insurance and real estate and the service industries surveyed. The trend was generally upward in most components of the main industrial divisions. In almost all industries and areas, employment was at a higher level than at July 1, 1956.

Payrolls.- Aggregate weekly payrolls at July I showed a substantial seasonal advance which brought the index to 186.9, a new high. An upsurge of employment, especially marked in relatively highly-paid industries, was the main factor in the rise, but a longer work week than was indicated in the preceding survey, and widely distributed increases in pay rates also contributed. On the other hand, some losses in earnings were reported, mainly in Quebec, where they were partly due to observance of the St. Jean Baptiste holiday.

Disbursements were higher on the whole than a month earlier in all provinces, in all but three of the 32 cities for which data are published, in each of the major industrial divisions, and in most of their component groups and sub-groups. Industrially, the most important exceptions were the tobacco, leather goods and clothing groups of manufacturing, in which the losses were associated in some cases with celebration of the holiday in Quebec, but also in the latter two with seasonal slackness in employment.

Per Capita Earnings. The general figure of average weekly wages and salaries at July 1 was \$64.56, a new maximum, as compared with \$63.93 at June 1, 1956, and \$60.87 at July 1, 1955. Among the important factors contributing to unusually high averages in many industries and areas in the period under review were upward adjustments in pay rates (notably for numerous classes of railway workers), a rather longer work week generally than a month earlier, when some losses in working time had been reported due

				H			11			II.

^{1.} Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies and non-metallic mineral products. The non-durable group includes the remaining manufacturing industries.

2. Mainly hotels, restaurants, laundries, dry cleaning plants and business and recreational services.

to the celebration of the Victoria Day holiday, with considerable expansion in activity in industries employing large proportions of men and paying above—average rates. On the other hand, the addition of many seasonal workers paid below their June 1 industry averages and observance of the St. Jean Baptiste holiday in Quebec tended to reduce the per capita figures in some cases.

Average wages and salaries mounted in all provinces except Prince Edward Island, and in about two-thirds of the communities for which data appear in Tables A and C. There were also increases from June 1 in a substantial majority of industries surveyed. Among the major divisions, the exceptions were construction, services and finance, insurance and real estate, in which employment of summer help was mainly responsible for small declines in the per capita figures.

The average in manufacturing rose to \$66.92, the highest on record, 5.8 p.c. above its July 1, 1955, level. The durable and non-durable goods industries shared in the generally upward movement. The most important exception in the former class was the iron and steel group, and in the latter, tobacco, leather goods, rubber, textiles and clothing. A shorter work week due to the St. Jean Baptiste holiday, already mentioned, was a factor in some cases.

In most industries and areas for which data are available, earnings were higher at the beginning of July than in the same period in 1955 and earlier years. Many new all-time highs were established. An exception to the generally favourable comparison with a year ago was the tobacco and tobacco products group of manufacturing.

Changes in Employment for Men and Women.— The number of men on the staffs of the larger industrial establishments at the beginning of July increased by 3.8 p.c., and the number of women by 2.0 p.c. The index of employment for male wage—earners and salaried employees stood at 125.1, as compared with 120.5 at June 1, while that for women was 119.5, as against 117.1 a month earlier. A year ago, the figures were 116.1 and 112.7, respectively. Women made up 218 per 1,000 on the forces at the date under review, as compared with 220 per 1,000 in the preceding survey, and also at July 1 last year. The highest July figure in the period for which data are available was 231 in 1946, and the lowest, 216 in 1952.

Factory employment for men and women rose by 2.0 p.c. and 1.9 p.c., respectively, at the date under review as compared with June 1, bringing the index numbers for workers of the two sexes to 121.0 and 107.4, respectively, as compared with 114.5 for men and 102.1 for women a year earlier. The general proportion of women per 1,000 factory employees was 217 at the beginning of July, unchanged from the preceding month and also from 12 months ago. Important improvement was indicated for such workers in fruit and vegetable canning and preserving and textile plants, with smaller gains in employment in tobacco, rubber and a few other branches of manufacturing, and also in trade, services and finance, insurance and real estate.

Changes in the Major Industrial Divisions.— The general advance of two p.c. recorded in factory employment at the first of July was slightly above-average for the time of year, and raised the index to a new maximum of 117.8. The previous maximum figure was 115.6, at Sept. 1, 1953. In the 12 months, employment has mounted by 5.6 p.c. The weekly payrolls disbursed by the co-operating establishments were 2.7 p.c. higher than a month earlier, and 11.6 p.c. above the July 1, 1955, figure, bringing the index to a new peak of 180.3. The general average of weekly wages and salaries in manufacturing, also an all-time high, was \$66.92, as compared with \$66.46 at the beginning of June, and \$63.28 at July 1 a year ago.

Oct. 1								
Nov. 1 Dec. 1								

^{1/}Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

Staffs reported in plants turning out durable manufactured goods rose by 1.1 p.c. from June 1. At 129.4, the index in this group was the highest since Aug. 1, 1944, and was eight p.c. above the July 1, 1955, figure. Disbursements in weekly wages and salaries in the division mounted by 2.2 p.c. in the month, and by 14.1 p.c. in the 12 months. Moderate increases in staff were indicated in all major components except transportation equipment, in which a small decline from June 1 was mainly due to lessened activity in the motor vehicle and parts and accessories groups. Relatively, the largest gain in the heavy industries was in wood products, chiefly in saw and planing mills, where workers rose by 3.3 p.c.

In the non-durable goods division, employment advanced seasonally by three p.c. since the beginning of June, slightly exceeding the increase recorded in a similar comparison a year ago, when the index was a few points below the latest figure of 107.7. Many groups in the category showed an upward movement in the month-to-month comparison. The greatest improvement was in textile mills (due largely to settlement of strikes in effect a month earlier) and in food processing, where the general gain was not equal to the post-war seasonal average. The paper products industry showed fairly substantial expansion, rising by three p.c. as compared with June 1. Larger staffs were reported in tobacco, rubber, printing and publishing and chemical plants. On the other hand, seasonal curtailment in activity was indicated in clothing and leather products. The weekly payrolls reported in non-durable goods manufacturing rose by 3.4 p.c. in the month, and were 8.9 p.c. above their level at July 1, 1955.

Following the seasonal pattern, employment generally in the non-manufacturing industries surveyed increased substantially at July 1. Logging staffs were larger in nearly all provinces. The greatest gain was in Quebec, due mainly to river driving operations. The Canada index in this industry, lll.l, was 16.7 p.c. higher than at June 1, and 9.7 p.c. above its position at July 1, 1955, although the month-to-month rise had then been larger. Improvement was noted in all branches of mining, except coal, which showed slight seasonal curtailment. Construction forces were 12.6 p.c. above their level a month earlier, showing the greatest July 1 expansion in many years; at 149.9, the index has only once been exceeded, at Aug. 1, 1952, and was 19.2 p.c. higher than at July 1, 1955. The rise of 2.2 p.c. in transportation, storage and communication was about average for the season. The gains in public utility operation, trade, finance, insurance and real estate, and the service industries surveyed also differed little from those generally recorded at July 1.

Very general increases in payroll disbursements were reported in all major industrial divisions and in most of their component groups as compared with the week of June 1, and also over the July 1, 1955, figures. Average wages and salaries rose in the month in most divisions. The exceptions were construction, finance, insurance and real estate and services, where the addition of summer help at pay rates below the June 1 level in their industries were mainly responsible for small declines. In all cases, however, the latest figures were higher than at July 1 in earlier years.

Provincial Changes in Non-Agricultural Employment. Industrial activity advanced in all provinces at July 1, when firms reported staff increases ranging from 1.9 p.c. in Ontario to over five p.c. in Quebec, New Brunswick and Newfoundland. The general index numbers of employment in all provinces except Prince Edward Island were higher than they were 12 months ago, in most areas reaching new all-time peaks.

Aggregate weekly wages and salaries of industrial workers in all provinces rose from the week of June 1, and were also greater than at July 1, 1955. Per capita earnings declined in Prince Edward Island and Quebec as compared with a month earlier, elsewhere showing increases that varied up to \$1.99 in British Columbia and \$2.96 in Newfoundland.

Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies and non-metallic mineral products. The non-durable group includes the remaining manufacturing industries.
 Mainly hotels, restaurants, laundries, dry-cleaning plants and business and recreational services.

Accelerated activity in construction was an important factor in the rise in the latter and also in British Columbia, where there were widely-distributed increases in numerous other industries. The average earnings were higher in all parts of the country than in the week of July 1, 1955.

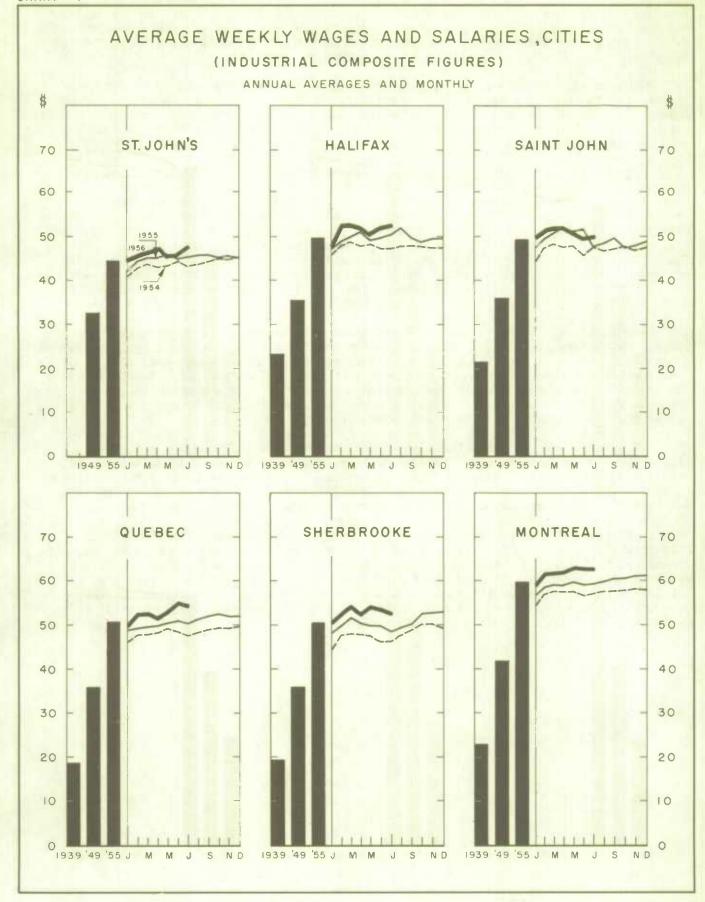

Industrially, considerable expansion in employment was indicated in the various provinces. The seasonal increases in working forces in construction, manufacturing and transportation, storage and communications in most areas were large, with those in Quebec being most outstanding. The provincial trends in nearly all other industries surveyed were favourable.

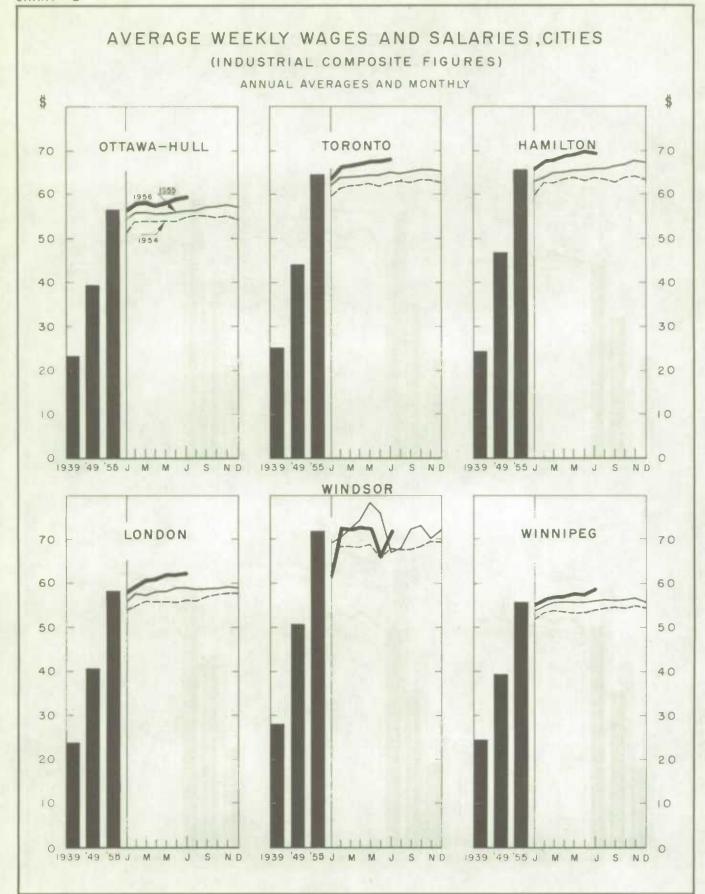

Changes in the Metropolitan Areas.— Employment was quieter in five of the 32 centres for which statistics appear in Tables A and C. The indexes fell fractionally in Sydney, Galt and Sarnia, and showed rather greater losses in Oshawa and Brantford, largely due to slackness in manufacturing. The staff increases recorded in the remaining metropolitan areas listed varied from O.l p.c. in London to 10.6 p.c. in Sherbrooke and 25.5 p.c. in Drummondville; resumption of operations in plants strike-bound when the last survey was made was the chief factor in the latter two centres. There were gains of just over one p.c. in Montreal, Toronto, and Vancouver, while Winnipeg firms reported an advance of 2.5 p.c. In almost all communities, the index numbers were higher than at July 1, 1955.

Industrially, there were widely distributed city increases in employment as compared with June 1. The considerable rise in manufacturing in Quebec largely reflected a more usual scale of operations following termination of labour-management disputes. Construction afforded more employment except in London, Sarnia and Galt; the losses in the latter two were small, while that in London was partly due to strikes in some building trades. The trend was upward in most instances in transportation, trade, public utility operation, services and the other industries surveyed.

The weekly payrolls distributed to industrial workers in 29 of the cities were higher than in the last survey. Noteworthy increases in Drummondville and Sherbrooke were due to settlement of disputes, already mentioned, and that in Windsor to a return to more usual working conditions following inventory-taking a month earlier. The trend was upward in the four largest communities, with Winnipeg showing a gain of 4.6 p.c.

Per capita weekly earnings rose at July 1 in 21 of the metropolitan areas listed; this group included Toronto, Winnipeg and Vancouver, while Montreal reported an insignificant decline. Lower averages of hours worked were a factor in most of the centres in which earnings were reduced from their June 1 level, with increased employment for seasonal workers, taken on at rates below the previous averages in their industries, contributing in other cases. In most centres, the latest averages exceeded those recorded in the week of July 1 in 1955 and earlier years.

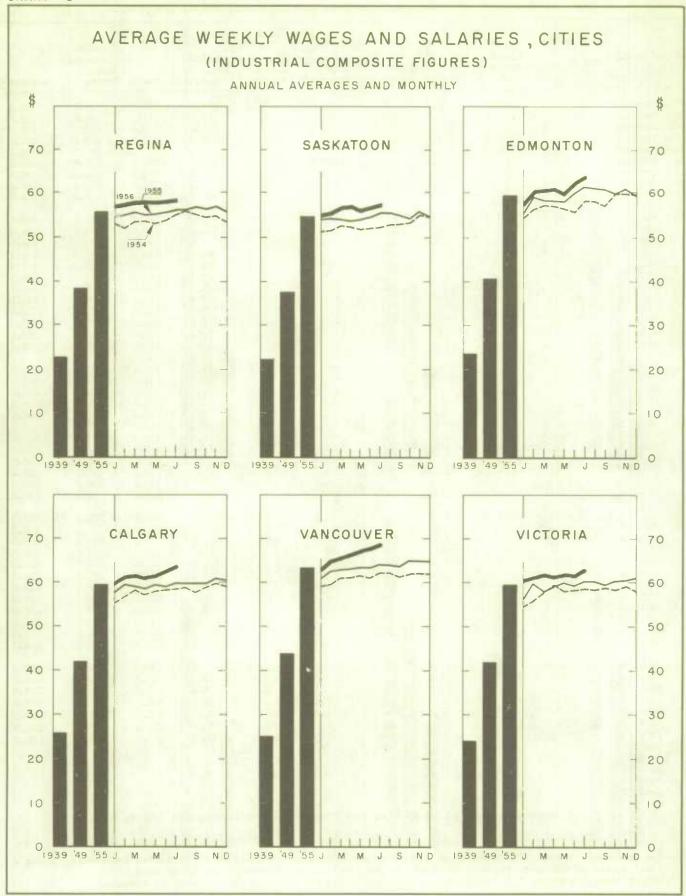

Table 1.- Index Numbers of Employment, by Industrial Divisions, Canada, (1949-100).

General.— The monthly surveys of employment and weekly payrolls relate to all branches of the industries listed in the table given in the following industrial coverage statement, except services, in which the industries represented consist mainly of hotels, restaurants, laundries and dry-cleaning establishments, recreational and business services. The surveys do not cover firms usually employing less than 15 persons, the number of which is very large in relation to their employee totals; establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested from all classes of employees, irrespective of their functions in the business; statistics for the owners are excluded. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage. - Virtual limitation of the surveys to firms with staffs of 15 and over results in a large and relatively even coverage of total employment in the included industries in the provinces and the cities for which data are segregated. The industrial representation, though large, is more uneven, the proportion of workers covered depending upon the organization of particular industries in larger or smaller units of operation. Complete information respecting the area and industry distributions of the working population is available only when the Decennial Censuses are taken. In 1951, data were not segregated for paid workers actually at work. The following estimates of coverage in the monthly surveys therefore are conservative since they relate employees of the reporting firms to all employees with jobs, including those absent from work without pay, so that they would not have been included in the monthly statistics of employment, payrolls and man-hours:

Estimated Industrial Coverage, June 1, 1951

Division

	2
Forestry (chiefly logging)	75
Mining (includes milling, quarrying, oil wells)	96
Manufacturing	
Transportation, storage and communication	
Construction	
Public utilities	
Trade	
Finance, insurance and real estate	
Services (specified industries only)	
All industries included	78

The coverage of total wage-earners and salaried employees in all industries, including those in agriculture, government, education, health and other classes excluded from the monthly surveys, as well as paid workers in the industries that are represented, approximates 59 p.c.

- It is important to note that the statistics of employees reported, as published in the monthly bulletins, do not represent estimates of total numbers of paid workers in specified areas or industries, but show only the distributions of men and women on the staffs of the co-operating employers at the indicated dates, including their full-time, part-time and casual employees.
- 2. The Questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees drawing pay in the last pay periods in the months with their payroll disbursements in the same periods. Workers on strike during the reported pay periods are not included in the statistics unless they draw pay from their employer; for example, take paid holidays during the dispute. Workers laid off during the pay period as an indirect effect of industrial disputes are not counted as employed.

Employees and earnings are grouped according to the duration of their pay periods monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested, before deductions are made for taxes, unemployment insurance contributions, etc.

*Mainly hotels, restaurants, laundries, dry-cleaning plants, recreational and business services. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are included, as are payments for absences with pay in the reported pay periods. The statistics do not include employers' contributions to unemployment insurance, workmen's compensation and other welfare plans, nor do they include amounts paid for pensions, retirement gratuities, bonuses paid at irregular or infrequent intervals, and various other supplementary labour costs.

- 3. The Processing. Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the number of days per week on which the establishments operated in the pay period: the denominators of the fractions are the numbers of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the co-operating firms. The workers reported are not necessarily employed for a period of a week by any one establishment. In order to reduce duplication in the statistics of employment where individuals may appear on the payrolls of more than one employer in a period of several weeks, respondents are asked to furnish data only for the last pay period in the month for their various classes of employees.
- 4. The Tabulation.— The material tabulated each month shows the number of workers drawing pay from the establishments furnishing returns, and the weekly earnings of such employees, with similar information for the men and women employed by the same firms a month earlier, and in the basic period (1949). The statistics of the first tabulation for each month are preliminary; the re-tabulation of the data on the succeeding month's tabulation permits incorporation of revisions in the material originally tabulated, and the inclusion of returns received too late for the preliminary tabulation.
- 5. The Index Numbers.— The index numbers of employment and payrolls represent the percentage relationships between the employees of the establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1949 averages of these employers. The 1949 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1949 are tabulated with zero base figures. The basic averages of establishments which operated in 1949 but have since been added to the mailing list, have been incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1949.
- 6. The Weekly Wages and Salaries.— The statistics of average weekly earnings result from the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. In addition to basic wages and salaries, the earnings include overtime payments, shift premiums, commissions, cost-of-living, incentive and production bonuses, and other bonuses paid at frequent intervals. They also include amounts paid employees absent on leave with pay during the reported pay periods, i.e., during vacations, statutory holidays, sick leave, etc.

The earnings do not include the value of free board and lodging and other perquisites, employers' contributions to unemployment insurance, workmen's compensation and other welfare funds. Also excluded are the cost to employers of certain other employee benefits, such as bonuses paid at irregular or infrequent intervals, (e.g., annual bonuses), pensions, retirement gratuities, etc.

The revised figures of earnings in the monthly bulletins incorporate retroactive pay for one month, corrections in the material originally tabulated, and data received too late for inclusion in the first tabulation; for the most part, such adjustments are not carried back for more than one month,

7. Hourly Earnings. - Statistics of average hours and average hourly and weekly earnings of wage-earners for whom the reporting employers keep record of hours worked are contained in the monthly bulletins on man-hours and hourly earn-

FOOTNOTES

The following notes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.

- (a) Alluvial gold; auriferous quartz mining.
- (b) Copper-gold-silver; iron, nickel-copper; silver-cobalt; silver-lead-zinc; miscellaneous metal mining.
- (c) Non-metal mining; quarrying, clay and sand pits.
- (d) Carbonated beverages; wines.
 (e) Biscuits and crackers; miscellaneous foods.
- (f) Leather gloves and mittens; tanneries; miscellaneous leather products.
- (g) Includes plywood and veneer mills.
- (h) Miscellaneous wood products.
- (i) Paper boxes and bags; roofing papers; miscellaneous paper products.
- (j) Household, office and store machinery, machine tools; machinery, n.e.s.
 (k) Abrasive; asbestos; hydraulic cement; clay; glass; lime and gypsum; stone; concrete; miscellaneous non-metallic products.
- (1) Includes explosives, ammunitions and pyrotechnics; fertilizers; paints and varnishes; soaps, washing and cleaning compounds; toilet preparations; vegetable oil mills; primary plastics; miscellaneous chemical and allied products.
- (m) Buildings and structures; other construction; special trade construction.
- (n) Includes services incidental to water transportation.
- (o) Interurban bus and coach and urban and suburban transportation systems; taxi-cab and truck transportation; services incidental to transportation; other transportation.
- (p) Interurban bus and coach and urban and suburban transportation systems,
- (q) Gas manufacture and distribution; water and sanitary services; other public util-
- (r) Chiefly recreational and business services.
- (s) Data for the Northwest Territories and Yukon are included in Alberta and British Columbia respectively.
