# MAN-HOURS AND HOURLY EARNINGS 

 WITH AVERAGE WEEKLY WAGES FEBRUARY, 1959Published by Authority of
The Honourable Gordon Churchill, Minister of Trade and Commerce

DOMINION BUREAU OF STATISTICS
Labour Division
Employment Section

## EMPLOYMENT AND EARNINGS REPORTS

Following are other publications of the Labour Division based upon estainlishment data in the field of industrial employment, earnings and hours:

72-001 - Advance Statement on Employment and Weekly Earnings - Monthly $\rightarrow$ Price $\$ 1.00$ per year
(index numbers of employment and averages of weekly wage and salary statistics for Canada (major industrial divisions) and the provinces (industrial composite figures))

72-002-Employment and Payrolls - Monthly - Price $\$ 3.00$ per year (industry and area index numbers of employment and payrolls and averages of weekly wage and salary statistics; comparisons with earlier periods; charts and explanatory material)

72-005 - Estimates of Labour Income - Monthly - Price $\$ 2.00$ per year
(monthly or quarterly estimates of wages, salaries and supplementary labour income, both unadjusted and seasonally adjusted, for specific industries and regions; with annual totals from 1947)

72-006 - Hiring and Separation Rates in Certain Industries - Semi-Annual - Price $\$ 1.50$ per year
(data for establishments having one or more employees covered by unemployment insurance and employing ten or more persons; also all units of chain or multiple firms, with at least one insured employee, regardless of number employed)

72-201 - Review of Employment and Payrolls - Annual - Price $\$ 1.00$
(industry and area index numbers of employment and payrolls and average weekly wages and salaries, monthly and annually, over a lengthy period; charts and explanatory material)

72-202-Review of Man-Hours and Hourly Eamings - Annual - Price 75 cents
(industry and area averages of hours per week, hourly and weekly wages, monthly and annually, from 1945; charts and explanatory material)

72-203-Earnings and Hours of Work in Manufacturing - Annual-Preliminary Report - Price 25 cents
(separate figures of earnings and hours for men and women and for wage-earners and salaried employees in one week in autumn for major manufacturing industries, Canada, and manufacturing in provinces and larger metropolitan areas)

72-204 - Eamings and Mours of Work in Manufacturing - Annual - Final Report - Price 75 cents
(separate figures of earnings and hours for men and women and for salaried employees and wage-earners in one week in autumn from 1946 with industrial and area detail; charts and explanatory material. Special data are obtained on a rotational basis in successive years:
(1) a segregation of office and clerical workers from the salaried group
(2) a distribution of wage-earners and salaried employees in a given range of weekly earnings and
(3) a distribution of wage-earners in a given range of hours worked in the survey week)

Inquiries regarding these reports should be directed to the Labour Division, Dominion Bureau of Statistics, and subscriptions to the Information Services Division of the Dominion Bureau of Statistics of to the Queen's Printer, Ottawa.

EXPLANATORX NOTES
Notes on methods and scope of monthly surveys of hours and earnings ..... 1
FOOTNOTES ..... 111

Beginning with the January issue, statistics publishod in Man-Hourg and Hourly Earninga are identified by labelling figures for the last pay period in each month for that particular month, rather than 28 of the first of the following month. To illustrate this change, means that the February statistics published in this series for 1959 and earlier years are identified as of the end of that month, rather than as of March 1. Similar dating revisions have been carried back to the beginning of the record (1945). The annual averages throughout the record have been recalculated on the basis of the months January 31 to December 31, instead of for the period January 1 to December 1, as given in the 1958 and earlier publications. There is no change in the material collected and processed.

The 1958 issue of the annual Rovien of Man-Hours and Houriy Earnings will be the first number of that publication in which averages calculated on the new basis will be published.

## Chenger in Tables

Beginning with the January issue, a new method of publishing historical tables was also introduced. Table 4, giving historical data for manufacturing and for durable and non-durable goods, will be continued each month. Tables containing provincial and urban areas statistics (Tables 5a and 6a) will appear in rotation With Tables $5 b$ and 6b, containing historical figures for important non-manufacturing industries and the major groups of manufacturing. Table 6 b is now, being published for the first time in the present report. Tables 5 a and $6 a$, published in the January issue, will appear again in the March issue, while Tables $5 b$ and 6b will be ropeated in the April report.

## Manfacturing

Average hourly earnings of wagemearners in manufacturing rose by a cent to $\$ 1.71$ in February, equaining the previous maximum in December, 1958, and 6 cents higher than in February, 1958. The average work week rose by 0.3 hours and was 0.9 hours longer than a year earlier. Average weakly wages reached a new maximum of $\$ 69.77$, $\$ 3.65$ above the level 12 months ago.

At $\$ 1.85$ the average hourly earnings in durable goods manafacturing were unchanged while the average work week rose by 0.3 hours. Transportation equipment in Ontario showed the greatest variation during the month. Motor vehicles showed a substantial increase in employment and in hours worked, due to the settlement of industrial disputes which had affected the situation towards the end of January. Average hourly earnings were lower, however, because of reduced overtime in some factories. Ontario aircraft plants reported large declines in wage-earners, hours and earnings as a result of layoffs just prior to the latest survey week. Overtime work was reported in shipyards in Nova Scotia and British Columbia. A longer work week and increased employment in iron and steel products were mainly a result of aeasonal activity in agricultural implement manufacturing. Settloment of strikes in British Columbia accounted for much of the increase in the number of wage-earners reported in wood products. Gains aince February 1958 in the heavy manufactured goods division amounted to six conts in average hourly earnings and 0.9 hours in average hours worked.

In non-durable goods manufacturing, average hourly earnings rose by one cent to \$1.57, but were one cont lower than the maximum in December 1958. The average work week rose by 0.2 hours and average weakly wages reached a new maxdmum of $\$ 63.97$. overtime in pulp and paper mills in Newfoundland, Quebec and Ontario, wage-rate increases in meat packing and rubber products, overtime in rubber products and printing and publishing and increased activity in distilleries contributed to higher hours and earnings in non-durable manufacturers as a group. In a year-to-year comparison, average hourly earnings in this division have risen by 5 cents and the average work weok by 0.9 hours.

## Non-Manufacturing Industries

Average hourly earnings in mining rose by 4 cents in February to $\$ 2.05$, a new maxdmum. Average hours worked in the week were an hour above January and at 42.7 hours, were the highest recorded sinte Pebruary, 1958. Average earnings wore generally higher, due to several factors. Important among these were increased production bonuses in metal mining, partly due to the resumption of more normal operations following strikes in Ontario, and overtime work in ofl wells in Alberta. Substantial layoffs of coal miners, in Nova Scotis also contributed oarnings in that industry generally averaging below the group figure.

The number of wage-earners reported in highway construction and maintenance, was higher largely due to extensive snow clearing operations in meny provinces during the month. Building and general ongineoring contractors afforded less employment, but average hours rose by 2.7 hours, with Quebec and Alborta showing the largest gains. The work weak was longer in building construction, although the number of wago-earners was silghtly lower and average hourly oarnings wore unchanged.

NOTE: THE MOST RECENT STATISTICS THROUGHOUT THIS BULLETIN ARE SUBJECT TO REVISION.

## AVERAGE HOURLY EARNINGS IN SPECIFIED INDUSTRIES IN THE DURABLE MANUFACTURED GOODS DIVISION

## (IN DOLLARS)

- SMELTING AND REFINING
——— NON-FERROUS METAL. PRODUCTS
.......... brass and COPPER prooucts
-.-- aluminum products

## Provinces

Average hourly earnings of wage-arners in manufacturing in New Brunswick, Quebec, Ontario, Saskatchewan and British Columbia showed no change between January and February; in Newfoundland, Nova Scotia, Manitoba and Alberta gains were recorded. The increase in Newfoundland was much above average, due to heavy overtime in pulp and paper mills for overhaul of machinery combined with layoffs and short time among lower-paid workers in fish processing Short time in fish processing plants also contributed to a 3 cent rise in manufacturing generally in Nova Scotia, although overtime work in shipbuilding was a more important factor.

Exceptin British Columbia, the average work week was longer in all provinces than in January, and in all cases the averages were higher than in Fobruary, 1958. Over the year, the gains in Quebec and Ontario approximated one hour. In Quebec, longer working hours in the non-durable group, notably leather products, textiles, clothing and pulp and paper, contributed materially to the gain. In Ontario, a substantial rise in working time in motor vehicles and smaller increases in a number of other industries, accounted for the gain in the year-to-year comparison.

## Urben Areas:

Average hourly carnings in manufacturing were higher in 18 of the urban areas for which statistics are published in Table 3, unchanged in 12 and lower in 6. The average work week was longer in 19, shorter in 13 and unchanged in 24 . Average weekly wages were higher in 22 centres and lower in 14 .

In the large metropolitan areas, averages of hourly earnings were unchanged in Montreal and Winnipeg. In Toronto, average hourly earnings fell by 2 cents, due to layoffs of highly paid workers in the aircraft industry, a factor partly offset by wage-rate increases in rubber products and oil refining, overtime in printing and publishing and seasonal activity in agricultural implements. Hoightened activity in agricultural implements and rubber products also contributed to an increase of a cent in average hourly carnings in Hamilton. In Vancouver, overtime in shipbuilding and printing and publishing and wage-rate increases in meat packing and oil refining partly accounted for a gain of 2 cents in average hourly earnings in manufacturing as a whole. The average work week was slightly longer in all five cities.

Among the other urban areas, Oshawa showed shorter hours of work and lower earnings due to reduced overtime work in transportation equipment. In Windsor, hours and earnings in manufacturing were higher because of the return of striking workers to plants in the same industry. Strike settlements also raised levels of earnings and hours in Sorel. Higher rates and overtime work in shipbullding resulted in higher earnings in manufacturing generally in Victoria and Halifax. In Brantford and Galt there was increased activity in iron and steel products, raising the general level of average hourly earnings of factory workers by 2 cents in February as compared with a month earlier.

TABLE T.Average Hours and Average Eamings of Hourly-Rated Wage-Eamers, Conada, by Industry

Fote:- The current veekly wages relate to the last pay periode in the month, while the Consumer Price Index relates to the beginning of the month. The current average of veekly wages for any month is thometorg atijcatca in the above totite
 A statement of uses and limitations of the adjusted figures appears on page 1i.

## NOTES

General. - The monthly statistics of average hours, average hourly earnings and average weekly wages, like those of employment, payrolls and average weekly wages and salaries, are based on data from establishments usually employing 15 persons and over. The latest monthly figures are subject to revision.

Coverage. - Firms are asked to furnish information for the male and femsle wage-aanners for whom they keep records of hours worked, so that the statistics relate, in the main, to hourly-rated wage-earners, or production workers, emplayed full time and part time. Casual workers are also included, provided that they work at least one day in the reported pay period. Data for salaried personnel are purposely excluded. In many cases, information is not avallable for cortain classes of wage-earners, whose eanings, like those of most salaried employees, are not directly dependent on the number of hours worked; examples of wage-earners frequently excluded ase route-drivers, plece-worlers in many but not all establishments, truck men, etc. Numerous employers do not keep records of manhours for any classes of employees. The number of workers for whom information is glven in the present report is therefore smaller than the total number of workers (wage-earners and salarled employees) for whom statistics of employment, payrolls, average earnings, sex distribution, etc., are given in the monthly reports on employment and payrolls. These also include figures for certaln industries not represented in the present report because relatively few of the wage-earnens therein are paid on an hourly basls with the result that man-hour records are lacking. Such industries include public utility operation, trade, finance, insurance and real estate and some branches of transportation, storage and communication and service.

In manufacturing, the data relate to over 70 p.c. of all employees on the staffs of the firms cooperating in the monthly surveys of employment and payrolls; in 1956 the wage-earners for whom information on man-hours was obtained formed some 83 p.c. of the total number of hourly-rated and other wage-earners reported by practically all manufacturing establishmers to the Annual Census of Manufactures. In mining and construction, data on man-hours and hourly earnings are provided for approumately 75 p.c. and 68 p.c. of the total employees of firms co-operating in the monthly surveys of employment and payrolls in those industries, respectively; in 1956, the monthly statistics were based on approximately 93 D.c. of the total number of wage-earners reported in the annual survey of the Mineral Statistics Section of the Industry and Merchandising Division.

Man-hours. - The man-hours statistics include hours worked by fulltime and part-time wageearners, including overtime hours actually worked; premium or penalty hours credited for purpose of
computing overtime payment are not included. Hours credited to wage-earners absent on leave with pay in the reported pay periods are included in the statistics as though the hours had been worked. The averages are obtained by dividing the aggregate hours reported for the week by the number of fulltime and part-time wage-earners working such hours.

Wages. - The questionnalre calls for a statement of gross wages earned by the full-time and part-time wage-earners whose hours are reported, before deductions are made for taxes, unemployment insurance contributions, etc. Payments for overtime work, incentive or production and cost-of-living bonuses pald at regular intervals, and amounts credited to wage-eamers on leave with pay in the reported pay periods are included. The value of board and lodging, which in some cases is part of the remuneration of workers, is not included. Bonuses paid at infrequent intervals and employers' contributions to welfare funds such as workmen's compensation, unemployment insurance, pension and medical plans and certain other employee benefits are also excluded.

So far as is possible the revised figures of average hourly and weekly earnings incorporate retroactive pay for one month as well as correctlons In the material originally tabulated and data received too late for inclusion in the frst tabulation; for the most part, such adjustments are not carried back for more than one month.

Pay Periods. - Statistics of man-hours and wages reported for periods exceeding one week in duration are reduced by the appropriate proportions to obtain the number of hours and the wages for one week in the stated pay period. Such data are combined with weekiy figures furnisbed by employers whose records are maintained on a weekly basis, so that, in all cases, the tabulated statistics represent the situation in one week in each month.

Variations in Trends of average earnings result from many factors, such as changes in wage rates, in amounts of overtime work, short-time work, shift differentials, incentive or production bonuses and in the area, occupational and sex distributions of the reported working forces. Differences in industrial distributions, with related occupational and sex distributions, are the principal factors contributing to differences in the levels of eamings in particular areas.

Urban Area Statistics published in the present report include data for establishments situated in the metropolitan and urban areas as defined in the 1956 Census Bulletin 1-6, "Population - Incorporated Citles, Towns and Villages", except that the st. Catharines statistics include Port Colborne and Welland in addition to the defined urban area. Statistics given in the report for urban areas not defined in the above-named publication include Iberville with St. Jean, Nitro with Valleyfield and Preston with Galt.

Measuring the Purchasing Power of Eamings.Changing consumer price levels affect the amounts of goods and services which a dollar wlll buy, and average earnings, of course, will be affected in the same way. An earnings measurement which tases the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels inse, or Increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quatities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of weekly average wages Mses from $\$ 50.00$ in week A to $\$ 60.00$ in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0 . Because of the 10 per cent rise in consumer prices, $\$ 1.00$ will not buy as much in week B as it would in week A. Likewise, a 20 per cent rise from $\$ 50.00$ to $\$ 60.00$ wlll overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the flgure of $\$ 60.00$ by the smount of the consumer price increase. The adjusted average is $\$ 55.00$ ( $60.00 / 110.0 \times 100.0$ ), whlch may be referred to as a weekly wage average for week $B$ expressed in the dollars of period $A$, or it may be sald to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of $\$ 50.00$ and the week B figure of $\$ 55.00$. Taking the week A average of $\$ 55.00$ as equal to 100.0 , the week B index becomes $1.10(55,00 / 50.00 \times 100,0)$. Such an index may be called an index of weekly real wages. It indicates that average wages for week $B$ will buy 10 per cent more goods and services than those received in week $A$, in spite of a 10 per cent rise in consumer prices. This 10 per cent increase in real wages compares with the rise of 20 per cent in money rages ( $60.00 / 50.00 \times 100.0$ ).

It should be noted that while the estimates of average real wages may reflect the experiences of
broad groups of worsers fairly well, their applicablity to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pettern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using a price index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax, pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' familes; they are latended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the saviags position of iamilies.

In Table 6, 1949 figures are used as reference levels for indexes of both actual and real wages, since this is the year selected by the Dominion Bureau of Statistics for general post-war index number comparisons. However, the adjustment made in the foregoing lilustration can be applied to any reference level, and it should not be inferred that the 1949 reference period has any special valldity for earnings comparisons. Percentage change between any two periods will be the same regardless of the reference period selected.

## FOOTVOTES

The following footnotes explain the content of various industrial classes listed in the detalled tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard

Industrial Classification; in these cases, ligures for certain categorles not shown are contained in the group totals.
(a) Alluvial gold and suriferous quartz mining.
(b) Copper-gold-silver; nickel-copper; sllver-cobalt; sllver-lead-zinc and miscellaneous metal mining.
(c) Oil and natural gas; oll shale and bituminous sand; contract drilling and prospecting for oll.
(d) Non-metal mining and quarrying; clay and sand pits.
(e) Tires, tubes and other rubber products.
(f) Leather gloves and mittens; leather tannerles and miscellaneous leather products.
(g) Miscellaneous wood products.
(h) Paper boxes and bags; roofing papers; mlacellaneous paper products.
(i) Household, office and store machinery; machine tools; machinery, n.e.s.
(j) Machine tools; machinery, n.e.s.
(i) Jewellery and silverware; white metal alloys; miscellaneous non-ferrous metal products.
(1) Abrasives; asbestos; hydraullc cement; clay; glass; lime and gypsum; stone; concrete and mlscellaneous non-metallic mineral products.
(m) Bullding includes buildings and structures, speclal trade contractors. General engineering includes other construction, other than highways, bridges and streets.
( n ) Interurban bus and coach and urban and suburban transportation systems; taxicab and truck transportation; services incldental to transportation; other transportation.
(o) Hotels and restaurants; la undries; dyeing, cleaning and pressing plants, and recreational services.
(p) The Northwest Teritories, with the exception of Baffin Island, are included in Alberta. Baffin island is included in Quebec. The Yukon Territory is included In British Columbla.
(..) Figures not avallable.
