DEPARTIENT OF TRADE AND COMMERCE
DOMINION BUREAU OF STATISTICS EMPLOYMENT AND PAYROLL STATISTICS BRANCH

OTTAFA - CANADA
STATLSPRERGY AT JULY 1 AND JUNE $1,1945$.
Dominion Statistician: S.A. Cudmore, MoA。 (Oxon.) LL.D. (Tor.), F.S.S., F.R.S.C. Chiof, Employment and Payroll Statistics Branch: M.E.Ko Roughsedge.

> 1.- Manufacturing.

The present bulletin on man-hours and hourly earnings contains data as at ${ }^{\text {ug. }} \mathrm{l}$; in addition to the usual information for leading industries in the Dominion, statistics are given for the first time for the larger industries in the various provinces.

As in immediately preceding reports, there was a reduction in the number of wage-earners employed at hourly rates in manufacturing; the 6,141 co-operating establishments reported a total of 802,730 such employees, as compared with 820,036 at the first of July. This decrease of 2.1 p.c. was accompanied by that of two poc. in, 1/ Definitions

Wage-Earners.- Employers are asked to furnish statistics of man-hours on behalf of those wage-earners for whom they keep a record of aggregate hours worked, so that the data relate, in the main, to persons employed at hourly rates. Information for salaried employees is purposely excluded, while in many cases, statistics of man-hours are not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent upon the number of hours worked; examples of wage-earners most conmonly excluded are route drivers, truck men, piece-workers in many establishments, etc. In addition, some employers do not keop a record of man hours for any classes of employees. Accordingly, the number of workers for whom statistics are given in the present bulletin is smaller than the total number of employees, (salaried personnel and wage-earners) for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjects.

Man-Hours.- The statistics of man-hours include overtime, as well as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the reported pay period are included in the statistics as though the hours for which payment was made had been worked.

Vages.- The wages reported represent gross earnings before deductions are made for texes, unemployment insurance, etc.; they do not, however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and production bonuses and overtime payments are included, as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average wages result from the multiplication of the averago hours worked during the period of obsorvation, by the average hourly earnings reported in the same period.

Pay Periods.- Statistics of man-hours and hourly wages reported for periods exceeding one week in duration are reduced by the approrriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one week in the indicated pay period; such do information is then added to the data furnished by employers who pay on a week basis, so that, in all cases, the tabulated data represent the situation in one week in each month.
the number of man-hours worked. These feil from $36,247,082$ in the week ending July 1 to $35,521,002$ in the week of Aug. 1。 The aggregate weokly earnings of those employed at hourly rates at the latter date amounted to $\$ 24,703,387$, a total which was lower by 2.7 p.c. than that of $\$ 25,377,381$ a month earlier.

There was no general change in the average hours worked in manufacturing, these bing reported as 44.3 per week at July 1 and at Aug, 1; at the latter date, the hourly earnings averaged 69.5 cents per hour, as campared with 70.1 cents in the preceding return. The decline in the average hourly earnings in manufacturing as a whole during the month was largely due to the significunt changes taking place in the industrial distribution of the wage arners for whom statistics of hourly earnings are aupilable, there boing a reduction of some 13,500 in the numbers employed in the more highly-paid durable manufactured goods industries, as compared with that of about 3,800 wage earners reported by establishments manufacturing non-durable goocs; the average hourly earnings in the former division are substantially higher, at 76.9 cents per hour at Aug. 1 , as compared with the mean of 60.7 conts in the latter. category.

Decreased overtime work, due in part to cancellation of war contracts and during the holiday season wes also a factor in the reduction of 0.5 cents in the general average in manufacturney this change is the largest indicated in the ten months for which data are available. Still another factor contriouting to the loss was the employment of increasingiy large numbers of relatively unskilled workers in the vegetable food industries during their period of seasonal activity.

Average Ilours Norked. The number of hours worked, on the average, in the woek ending Aug wrs practically the same as in the same week of the proceding month, when the sitmotion had in some instances been affected by the Dominion Day holiday. These 5nc averages, win that at June $1_{4}$ were the lowest in the record of 10 months, with the excepuluri un the means at Jan 3 and Apr. 1 , which had been affected by the year end and the Easter holidays, $r$ espectively. As alroady stated, a general diminution in the anount of overtime worked in war plants is an important factor contributing to this cosult.

In the durab?e manufactured goods industries, the average hours worked, at 44.7 in the week ending Aug 1 , were $3 / 10$ of an hour lower thon the July 1 figure of 45 per week. With the orception of the New Year's and the Eastor weeks, the latest weekly average is the hwest so far ported since the record was commenced at Nov. 1, 1944: In the case of the non-durable manufactured goods industrien, on the other hand, there was in the month an increase of $2 / 5$ of an hour in the weekly average, which stood at 43.7 per person at Aug. I: The incroase partly reflected recovery from the loss of working time due to the fairly general observance of holidays wich had then fallen within the period of observation at July 1. However, the latest average per week was lower than that at earlier datos when the holiday factor had not entered into the situation, and overtime had been more prevalent.
fifths of a Avaragen Hourly Earnings As already stated, the falling off of two fifths a cent in the average hourly earnings in manufacturing as a whole at Aug. 1 reduction in the proportion of workers engaged in the heavy manufacturing industries, where rates of pay are generally above the average. The highest figure in the record was 70.5 cents, indicated at Dec. 1.1944 , and May $l_{j}$ 1345. The variation of one cent per hour during the period of observation is not particularly marked, but is probably indicative of a trend which will beowe increasingly important in coming months, as overtime continues to fall and the industrial distribution of workers reverts to normul. In the table on page 3 of this bulletin appear statistics of man-hours, hourly earninfs and wage-earners in a considerable list of manufacturing industries throughout the Dominion, while average hourly earmines are piven for the more important industries in the different provinces in the table beriming on page 5. As has been pointed out in previous issues of this bulletin, consideration should be given to the sex distribution of the persozs employed in the different industries when the variations

Average Bours Worked and Averago Houriy and heakiy Larnings of the Magemarrera in Canada for whom Statiotice of Man-ifours are Avallable at June 1, July 1 and Aug. 1, 1945, and Number of Wage-Barners for whom Man-Hours Data were Avallable at the lateat date.
(The latest figures are subjeot to revision).

I/ Since 1941, the Dominion Bureau of Statistice has propared carrent indexes of avarago hourly earning of the enployeen of

the leteot figures aro as follows June 1, 142.9; July $1,141.7$; Aug. $1,141.2$ \& 4 Aug. 1, 1944, the index wes 143.5 .
The induatrion clased in the durablo manufactured industrioa are indioatod by an asteribk.
2/ Revised
in the average how wnera and in the average hourly and weekly earning are being studied.

The following table shows for manufacturing as a whole the statistics of average hours per week and average hourly earnings in the period for which such data are available. The latest figures are suoject to revision.

| Neek Preceding | Average Hours Per Week | Average Hourly Earnings | Average Veekly Wages (Col. $1 \times$ Col. 2) |
| :---: | :---: | :---: | :---: |

In the durable manufactured goods division, the effect of declining overtime work, and of curtailed employment in war plants is reflected in the statistics of salaries and wages, as well as in the statistics of wages, computed by the multiplica.tion of the average hours worked by the average hourly earnings; the reduction at Aug. l as compared with July $l$ in the case of the salaries and wages amounted to 17 cents in the week, while that in the wages was 28 cents. In the case of the light manufactured goods industries, a fractional incrases in the hours worked resulted in a gain of three cents in the weekly average of wages, notwithstanding a slight falling-off in the average hourly rate; no general chanfe was indicated in the weekly average oi salaries and wages.

In the ten months for which statistics of earnings of hourlywated employees are available, there has been a decrease of $\$ 2.15$ in the weekly wages in the heavy manufacturing industries; also in the period from Nov, 1, 1944, to Aug. 1, 1945, the weekly wages of hourly-rated employees in the non-durable manufactured goods

industries have fallen by 70 cents. The most important factor in the reduction in the latter group of industries is the decrease which has taken place since last November in the number of persons employed in the manufacture of chemical products for the war togethe with the seasonal increases in the food industries, in which the additional short tom employees are usually paid at the minimum rates.

## 2. Non-Manufaoturing Industrios.

In many cases, workers in the non manufacturing industries are not paid at hourly rates, so that there is a relatively small representation of the non-manufacturing industries in the table on page 3. In mining, a fraational decline in the avorage number of hours worked in the week ending Augo 1 was accompanted by a slight decrease in the hourly eamings. The average hours worked in bullding were slightly higher, but inoreased. empioyment for less highly skilled workers iractionally lowered the average houxly rate. In highway work, there were small advances in the number of hours worked and the avarage hourly earnings.

## 3. Frovincial Statistics for Leading Industrios.

Table 2, appearing for the first time in the monthly bulletins on manhours and hourly earnings, contain data for the leading industries in the various provinces. The statistics are subject to revision.

A comparison of the hourly earnings in manufacturing in the different areas with that in the Dominion as a whole, shows that in Nova Scotia, Ontario, Alberta and British Columbia, the provincial averages at Aug. l slightly exceeded the general average, while in the remaining provinces the means were a little lower. To an important extent, the deviations from the Dominion averages are due to differences in the types of industry represented in the provinces, rather than to very marked variations in the provincial figures for the same broad industrial groups. Thus, for iron and steel as a whole, the avarage hourly earnings at Aug. I ranged from 78.5 cents in Manitoba and 79.1 cents in Quebec, to 81.8 cents in Ontario and 90.3 cents in British Columbia. The range in manufacturing as a whole, on the other hand, was from 61.9 cents in New Brunswick and 64.6 cents in Quebec, to 71.2 cents in Ontario and 83 cents in British Columbia. In the textile industries, the range was from 43.9 cents in Nova Scotia and 49 cents in Quebec, to 53.8 cents in Ontar 0 , to 53.8 cents in Ontario; in that provinces, were employed larger proportions of persons in those branches of textile manufacturing in which the earnings tend to be above the general average for the industry.
